Contents include:

"Advancing Million Hearts®:
AHA and State Heart Disease and Stroke Prevention
Programs Working Together in Rhode Island"
August 9, 2016

This event was presented by the Million Hearts® Collaboration, co-chaired by the American Heart Association and the National Forum for Heart Disease and Stroke Prevention. Funding for this event is made possible (in part) by the Centers for Disease Control and Prevention for the Million Hearts® Collaboration.

Those invited to attend included colleagues from the American Heart Association, Rhode Island Department of Health, health systems, health insurers, and professional associations.

Meeting Purpose:
Connecting staff from AHA Affiliates, state health departments and other state and local heart disease and stroke prevention partners to establish and engage in meaningful relationships around Million Hearts® efforts.

Meeting Objectives:
At the end of the meeting, participants will be able to:
1) Identify Million Hearts focused activities for 2016
2) Recognize Million Hearts® evidence-based and practice-based CVD prevention strategies and approaches
3) List partner programs and resources that align with Million Hearts
4) Identify programs efforts that align and ways to work together
5) Create plan for follow-up to increase engagement
6) Recognize key contacts within heart disease and stroke prevention

Rhode Island Focus: Partner meeting, sharing, connecting

Registrants: 42

Evaluation Highlights:

The <u>most</u> valuable part of the meeting was:

- Opportunity to hear about current activities and resources available
  - Best practices
  - Partner sharing and aligning programs
- Networking
- Sharing resources with one another

Ways to improve in the future:

- Identify ways community based organizations can connect with clinical practices
- Concrete examples of how to implement best practices

Brainstorming Session Notes

- **High level overview of the key areas recognized for collaboration**
  - Community Health Network
  - Community Health Workers/certification program
  - Healthy Food Procurement/Nutrition
  - Health Equity Zones
  - Smoking Cessation, Tobacco 21
  - Self Measured Blood Pressure (SMBP)
  - State Innovation Model (SIM)
  - WISEWOMEN

- **Next steps over these next few months**
  - Identify additional partners
  - Discuss how to keep momentum going
  - Sub groups? Calls with stakeholders?

- **Content to share with the participants**
  - CHW certficiation program
  - How to promote and use the Community Health Network
  - SIM work
  - Share information through HealthCentric e-newsletter for providers
  - Resources from Thundermist- quiz on proper BP, smoking cessation resources, farmers market, cooking classes, yoga

- **Summary of the resources they need / compiled**
  - MH SMBP Resources http://millionhearts.hhs.gov/Docs/MH_SMBP.pdf
  - AHA Resources were shared by Nikki through email

Facilitated Discussion/Flip Chart Notes:

Strategy: Identify Undiagnosed Hypertension

Collaboration	Partner	Activity
Health Plans	- THC - HCA working with WDD to facilitate - HCA facilitate with faith-based organizations; barbers/hairdressers - ? HEZ RI Dept. of Health help connect	Collaborate on community BP checks [Michelle Barron-Magee – RI Dept. of Health]
NHPRI	Laura Jones – RIPIN	ER Diversion
UHC	Nikki.Burnett@heart.org Empowered to SERVE - Faith-Based - Housing - Collegic - Strategic Alliances Check. Change. Control.	Wise Women – health coaching

Strategy: Address Uncontrolled Hypertension

Collaboration	Partner	Activity
K. Hastings – Nursing, Pharmacists	- THC - HCA – ? Facilitate in collaboration	SMBP Education [Michelle Barron-Magee – RI Dept. of Health]
- Health Plans - Community Health Workers - Community Pharmacists - Smoke-Free Housing (Benvinda RI Dept. of Health)	- THC - Host WISE Women table at farmers' market Aug. 17 (Cindy Singleton – Westbay Community Action)	WISE Women
SIM		Nursing Education
Community Pharmacists	- RIPIN Community Health Workers - RI Dept. of Health	Medication Adherence
Community Health Workers	- THC	Patient Education

Collaboration	Partner	Activity
	- HCA have many resources and tools available - Nikki.Burnett@heart.org	
- HCA podcasts, webinar, and e-newsletter - Nikki Burnett – American Heart Association		Provider Education

Other ABCS Strategies

Collaboration	Partner	Activity
	- Megan Tucker – AHA - Nikki Burnett – AHA	Policy change for sugar reduction
	- RI Dept. of Health Tobacco Control - Megan Tucker – AHA	Tobacco 21
Incorporate low sodium Million Hearts® recipes into veggie bakes (Cindy – Westbay)	Incorporate Healthy Workplace Food & Beverage Toolkit to workplace (Cindy – Westbay)	Workplace Healthy Eating Program
Host healthy food instruction from partner agency at our work wellness event (Cindy – Westbay)	- THC (currently participating) - Megan Tucker – AHA - Nikki Burnett – AHA	Healthy Food Access
	RI Dept. of Health Tobacco Control	- Community Health Network - CHW Role in Community (sustainability/define)
K. Hastings – Nursing, Pharmacists	- RI Dept. of Health Tobacco Control - Nikki Burnett – AHA	Health Equity Zone
RIPIN Health Plans	- Communities of Care RIPIN - Communicate ER Diversion in our client case management (Cindy – Westbay)	Community of Care
K. Hastings – Nursing, Pharmacists	- RI Dept. of Health Tobacco Control - Help to ban tobacco in our supportive housing	Tobacco bans in public housing
	- Megan Tucker – AHA - RI Dept. of Health Tobacco Control	Tobacco-Free Youth
	RI Dept. of Health Tobacco Control	Reducing Tobacco Retailers

Other ABCS Strategies (cont.)

Activities	Partners
Community Health Network	- Nikki.Burnett@heart.org - RI Dept. of Health Tobacco Control - Smoke-Free Housing (Benvinda RIDOH)
Education for patients for proper blood pressure measuring	- Need partner to perform blood pressure checks at farmers' markets - K. Hastings – Nursing, Pharmacists - Qualidegree blood pressure measuring - HCA creating collateral materials
Farmers' Market (vouchers)	THC currently participating
Cooking classes	- HCA – ? facilitate collaboration with J&W or Wingate - THC currently doing - EBCAP (wants info) - RIDOH ? offer to health equity zones and raise awareness of nutrition in community/environment - HCA willing to collaborate
Yoga	- THC currently doing - EBCAP (wants info)
Engage Restaurant Association	Suggested intervention
ABCS of Taking Blood Pressure	AHA document – Nikki.Burnett@heart.org
Simple Cooking with Heart	AHA
Food and Beverage Toolkit - Community - Workplace - Vending	AHA
Access to Cessation Services - Provide resources to residents	- Smoke-Free Housing (Benvinda RIDOH) - RI Dept. of Health Tobacco Control - Advertise smoke-free message in senior and employee newsletters (Cindy -- Westbay) - THC - RI Dept. of Health Tobacco Treatment Specialist Network
Advocate for Smoke-Free Laws (locally)	- Campaign for Tobacco-Free Kids - Megan Tucker – AHA - Tobacco-Free RI - Tobacco Control Legal Consortium - March of Dimes - American Lung Association - American Cancer Society

Activities	Partners
Connect to community partners for tobacco-cessation – seeking partners statewide and FQHCs	RI Dept. of Health Tobacco Control Program
Smoke-free campuses	- RI Dept. of Health Tobacco Control Program - Nikki Burnett – AHA
Communication/messaging for tobacco cessation/smoke-free resources (Engagement tools and other collateral)	- RI Dept. of Health Tobacco Control Program - Offer smoke cessation as a work wellness activity (Cindy -- Westbay)
Youth prevention/healthy living initiatives	- Youth Advocacy – Megan Tucker, AHA - Healthy Lifestyles Program – RI Dept. of Health/RIPIN - Nikki Burnett – AHA
Diabetes education	THC
Practice transformation	
Provider competency – blood pressure check	

Additional Notes

Key Areas	Who, What, When
SMBP	- Align programs, integrate in practices - RI Dept. of Health, YMCA, AHA, Thundermist - Improve self-reporting
Health Equity Zone	- Healthier eating/cooking classes - RI Dept. of Health, Westbay Community Action - Hire CHW – deliver chronic disease programs - Certify CHWs - $100 every 2 years
Community Health Workers	- Patient outreach/follow up - Determine barriers – patient navigator - Healthcentric – share CHW info in newsletter
Nutrition	- Work wellness program - Request for speakers - Adelaide – Wise Women - Jen Olsen – connect Cindy to training - RI Dietitian Association - AHA Resources – Food & Beverage Toolkit (Nikki will send)
CHW Certification Criteria:	- Supervised work hours - Domain training hours/proof - On-the-job hours - No specific curricula

	- RI College – working on reorganization of CHW Association (navigate application process)

Advancing Million Hearts®:
AHA and Heart Disease and Stroke Prevention Partners Working Together in Rhode Island

AUGUST 9, 2016

10:00 AM - 3:00 PM ET

Healthcentric Advisors
235 Promenade St., Suite 500
Providence, Rhode Island 02908

MEETING PURPOSE:

Connecting staff from the American Heart Association (AHA) Affiliates, state health departments and other state and local heart disease and stroke prevention partners to establish and engage in meaningful relationships around Million Hearts® efforts.

MEETING OBJECTIVES:

At the end of the meeting, participants will be able to:

- Identify Million Hearts® focused activities for 2016
- Recognize Million Hearts® evidence-based and practice-based CVD prevention strategies and approaches
- List partner programs and resources that align with Million Hearts®
- Identify programs efforts that align and ways to work together
- Create plan for follow-up to increase engagement
- Recognize key contacts within heart disease and stroke prevention

MEETING OUTCOMES:

Attendees will have expanded their knowledge of evidence based programs, collaboration strategies, tools, resources and connections to align programs and new initiatives that support Million Hearts®.

AGENDA

10:00 AM **WELCOME, OVERVIEW OF THE DAY, AND INTRODUCTIONS**

5	Connections/plans	8/1/2016 8:17 AM

Meeting Evaluation:
Partners Working Together in Rhode Island

12 respondents completed the survey.

100% of respondents reported the meeting information was either *very useful* or *somewhat useful* in meeting the following meeting objectives.

- Identify Million Hearts focused activities for 2016
- Recognize Million Hearts® evidence-based and practice-based CVD prevention strategies and approaches
- List partner programs and resources that align with Million Hearts®
- Identify programs efforts that align and ways to work together
- Create plan for follow-up to increase engagement
- Recognize key contacts within heart disease and stroke prevention

The <u>most</u> valuable part of the meeting was:

- Opportunity to hear about current activities and resources available (5 respondents)
  - Best practices
  - Partner sharing and aligning programs
  -
- Networking (3 respondents)
- Sharing resources with one another (2 respondents)

The <u>least</u> valuable part of the meeting was:

- Everything was valuable (3)
- Physician's input
- Exercise at end on posters
- The sticker, network exercise—Didn't have a clear idea of the outcomes from next steps
- Advertisements given by some attendees
- Need to identify better ways to work together and plan for increasing engagement

Ways to improve in the future:

- Bring other stakeholders to the table (3)
  - "Lovely to have community partners at the table but too many Indians not enough Chiefs. Need buy in from the Health Centers, doctors, legislatures."
- Extend meeting ½ and include brief breaks after sessions
- Allow more time for communication among attends
- Identify ways community based organizations can connect with clinical practices
- Concrete examples of how to implement best practices
- Have another meeting in New Hampshire

Advancing Million Hearts®: AHA and State Heart Disease and Stroke Prevention Partners Working Together in Rhode Island

Advancing Million Hearts in Rhode Island

August 9, 2016

Providence, Rhode Island

Million Hearts®

Goal: Prevent 1 million heart attacks and strokes by 2017

- National initiative co-led by CDC and CMS in partnership with federal, state, and private sectors
- To address the causes of 1.5M events and 800K deaths a year, $316.6 B in annual health care costs and lost productivity and major disparities in outcomes

Key Components of Million Hearts®

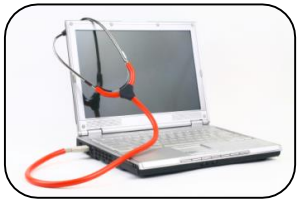
Keeping Us Healthy
Changing the environment

Health Disparities

Excelling in the ABCS
Optimizing care

Focus on the **ABCS**

Health tools and technology



Innovations in care delivery

Million Hearts®

Glantz. Prev Med. 2008; 47(4): 452-3.
How Tobacco Smoke Causes Disease: A Report of the Surgeon General, 2010.

Getting to a Million by 2017: *Public Health Targets*

Intervention	Pre-Initiative Estimate 2009-10	2017 Target
Smoking prevalence*	26%	24%
Sodium reduction	3580 mg/day	2900 mg/day
Trans fat reduction	0.6% of calories	0% of calories

* Includes all forms of combustible tobacco – cigarettes, pipes, and cigars

National Survey on Drug Use and Health, National Health and Nutrition Examination Survey

Getting to a Million by 2017: *Targets for the ABCS*

Intervention	Pre-Initiative Estimate 2009-2010	2017 Population-wide Goal	2017 Clinical Target
Aspirin when appropriate	54%	65%	70%
Blood pressure control	52%	65%	70%
Cholesterol management	33%	65%	70%
Smoking cessation	22%	65%	70%

National Ambulatory Medical Care Survey, National Health and Nutrition Examination Survey

Million Hearts® Accomplishments*

Changing the Environment

Reduce Smoking

Almost 4 million fewer cigarette smokers†

Reduce Sodium Intake

More than 2 billion meals/year will have reduced sodium‡

Draft Voluntary Guidance to Industry Released June 1, 2016

Eliminate Trans Fat Intake

Accomplished: FDA issued the final determination on artificial trans fat§

* Note this is a select set of notable Million Hearts® accomplishments.

† National Health Interview Survey, comparing 2011 data to 2014 data

‡ Aramark pledge http://blog.heart.org/aha-aramark-join-on-meals-initiative/

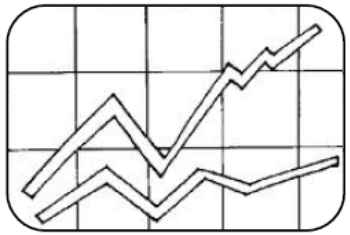
Million Hearts® Accomplishments

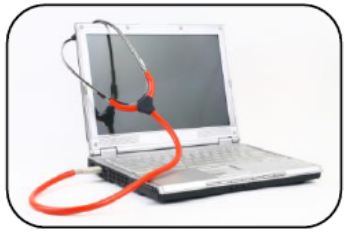
Optimizing Care in the Clinical Setting

Focus on the ABCS



Millions of Americans are covered by health care systems that are recognizing or rewarding performance in the ABCS**

Health Tools and Technology



Over half a million patients have been identified as potentially having hypertension using health IT tools††

Innovations in Care Delivery

Millions of dollars in public and private funds have been leveraged to focus on improving the ABCS‡‡

** CMS Physician Compare and HRSA Uniform Data Set
†† Unpublished data from AMGA/MUPD and NACHC HIPS project
‡‡ CMS Million Hearts Risk Reduction Model, AHRQ EvidenceNOW, AHA Southwest Affiliate HTN project

Million Hearts Progress to Date

- Engagement and activation
- Clinical Quality Measure alignment
- Understand what works, where, and why
- Resources that help
- Extraordinary support for prevention

Million Hearts®
Hypertension Control Champions

59 Champions

Representing Solo to 70,000 Clinicians

Serving over 13 million people

>70% Control Rate

- Practices and systems achieved control rates ≥ 70%
- Champions used evidence-based strategies
  - Hypertension treatment protocols
  - Self-measured blood pressure monitoring
  - Frequent check-in's
  - Registries and proactive outreach
  - Team-based care.
- ***Next Million Hearts® Hypertension Control Challenge planned for launch in Feb 2017***

Million Hearts®

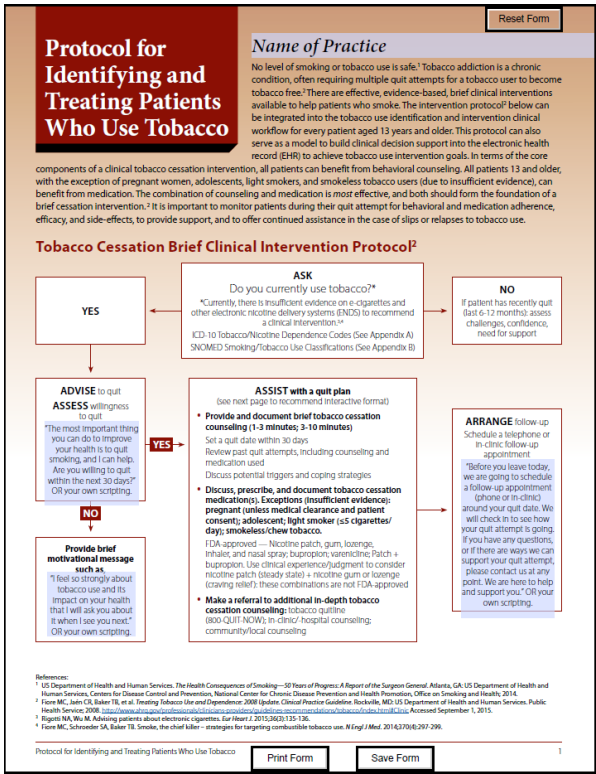
Standardizing Treatment through Protocols

- Hypertension Treatment Protocol

  Use is on the Rise

  – All Indian Health Service clinical settings
  – Many Federally Qualified Health Centers
  – Practices supported by CMS' Quality Improvement Organizations

- Tobacco Treatment Protocol
  – Released a Tobacco Treatment Protocol in May
  – Customizable templates
  – Implementation guidance
    - coming in July



Reset Form

Protocol for Identifying and Treating Patients Who Use Tobacco

Name of Practice

No level of smoking or tobacco use is safe.[1] Tobacco addiction is a chronic condition, often requiring multiple quit attempts for a tobacco user to become tobacco free.[2] There are effective, evidence-based, brief clinical interventions available to help patients who smoke. The intervention protocol[2] below can be integrated into the tobacco use identification and intervention clinical workflow for every patient aged 13 years and older. This protocol can also serve as a model to build clinical decision support into the electronic health record (EHR) to achieve tobacco use intervention goals. In terms of the core components of a clinical tobacco cessation intervention, all patients can benefit from behavioral counseling. All patients 13 and older, with the exception of pregnant women, adolescents, light smokers, and smokeless tobacco users (due to insufficient evidence), can benefit from medication. The combination of counseling and medication is *most* effective, and both should form the foundation of a brief cessation intervention.[2] It is important to monitor patients during their quit attempt for behavioral and medication adherence, efficacy, and side-effects, to provide support, and to offer continued assistance in the case of slips or relapses to tobacco use.

Tobacco Cessation Brief Clinical Intervention Protocol[2]

ASK
Do you currently use tobacco?*
*Currently, there is insufficient evidence on e-cigarettes and other electronic nicotine delivery systems (ENDS) to recommend a clinical intervention.[3,4]
ICD-10 Tobacco/Nicotine Dependence Codes (See Appendix A)
SNOMED Smoking/Tobacco Use Classifications (See Appendix B)

YES

NO
If patient has recently quit (last 6-12 months): assess challenges, confidence, need for support

ADVISE to quit
ASSESS willingness to quit
"The most important thing you can do to improve your health is to quit smoking, and I can help. Are you willing to quit within the next 30 days?"
OR your own scripting.

YES

ASSIST with a quit plan
(see next page to recommend interactive format)
- **Provide and document brief tobacco cessation counseling (1-3 minutes; 3-10 minutes)**
  Set a quit date within 30 days
  Review past quit attempts, including counseling and medication used
  Discuss potential triggers and coping strategies
- **Discuss, prescribe, and document tobacco cessation medication(s). Exceptions (insufficient evidence): pregnant (unless medical clearance and patient consent); adolescent; light smoker (≤5 cigarettes/day); smokeless/chew tobacco.**
  FDA-approved — Nicotine patch, gum, lozenge, inhaler, and nasal spray; bupropion; varenicline; Patch + bupropion. Use clinical experience/judgment to consider nicotine patch (steady state) + nicotine gum or lozenge (craving relief); these combinations are not FDA-approved
- **Make a referral to additional in-depth tobacco cessation counseling:** tobacco quitline (800-QUIT-NOW); in-clinic/ hospital counseling; community/local counseling

ARRANGE follow-up
Schedule a telephone or in-clinic follow-up appointment
"Before you leave today, we are going to schedule a follow-up appointment (phone or in-clinic) around your quit date. We will check in to see how your quit attempt is going. If you have any questions, or if there are ways we can support your quit attempt, please contact us at any point. We are here to help and support you." OR your own scripting.

NO

Provide brief motivational message such as,
"I feel so strongly about tobacco use and its impact on your health that I will ask you about it when I see you next."
OR your own scripting.

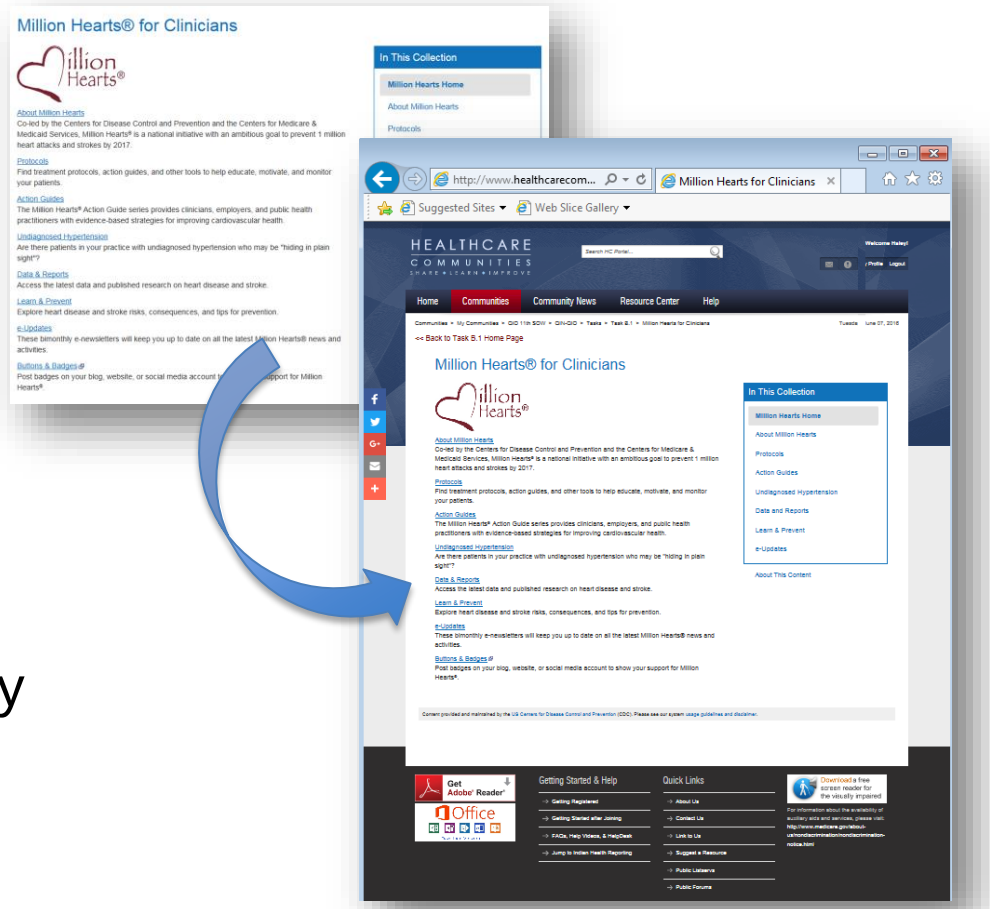
Million Hearts® Microsite for Clinicians

- Syndicated for your website audience
- Customized for your site's size and color pallet
- Brand it with your logo
- Content is continuously maintained by CDC



The microsite and embed code will be available at https://tools.cdc.gov/medialibrary/index.aspx#/results

What Must Happen To Prevent a Million?

Reduce Smoking
6.3M fewer smokers

- Year-round media campaigns; pricing interventions
- Targeted outreach to drive uptake of covered benefits
- Systematic delivery of cessation services through use of cessation protocols, referrals to quit lines, and training of clinical staff
- Widespread adoption of smoke-free space policies
- Awareness of risks of second-hand smoke and the health benefits of smoke-free environments

Control Hypertension
10M more patients

- Detection of those with undiagnosed hypertension
- Systematic use of treatment protocols & other select QI tools
- Practice of self-measured BP monitoring with clinical support
- Recognition of high performers; dissemination of best practices
- Connection of clinical & community resources to benefit people with HTN
- Enhanced medication adherence
- Intense focus on those with high burden and at high risk

Decrease Sodium Intake
20% reduction

- Adoption of Healthy Food Service Guidelines
- Voluntary sodium reduction and expansion of choices by food industry
- Recognition of high performers and dissemination of best practices
- Clear communication of the evidence supporting the health benefits of population-level sodium reduction

Million Hearts®

Events will also be prevented by improving aspirin use, cholesterol management, and utilization of cardiac rehab, and by eliminating artificial trans-fat consumption

Focus of 2016

- Smoking cessation
  - Facilitate implementation of tobacco cessation protocols
  - Promote smoke-free spaces
- Hypertension control
  - Facilitate use of self-measured BP monitoring, treatment protocols, and processes to find the undiagnosed
  - Share best practices by promoting action guides that identify and control hypertension
- Sodium reduction
  - Advance adoption of procurement guidelines
  - Disseminate healthy eating resources

Focus of 2016

- Cholesterol management
  - Implement statin measure across clinical settings
  - Support partner actions currently underway
- Cardiac rehab
  - Facilitate collective actions to increase referral and participation
- Embed ABCS measures in value-based models
- Capture and tell the story of your success
- Recognize high performers & share best practices
  - Learn about the successes of the Hypertension Control Champions and share their lessons learned.

The Million Hearts® Initiative

Robin Rinker, MPH, CHES
Health Communication Specialist

Million Hearts®

Goal: Prevent 1 million heart attacks and strokes by 2017

- National initiative co-led by CDC and CMS in partnership with federal, state, and private sectors
- To address the causes of 1.5M events and 800K deaths a year, $316.6 B in annual health care costs and lost productivity and major disparities in outcomes

Advancing Million Hearts in Rhode Island

RIDOH Programs

August 9, 2016

Jennifer Olsen-Armstrong, MS, RD
Chronic Care and Disease Management Team, RIDOH
Jennifer.Olsen@health.ri.gov

Million Hearts® Targets

Changing the Environment

Reduce smoking

Reduce sodium Intake

Eliminate trans fat intake

By 2017...

The number of merican smo ers has declined from to

mericans consume less than milligrams of sodium each day

mericans do not consume any artificial trans fat

Optimizing Care in the Clinical Setting

Focus on the ABCS

Use health tools and technology

Innovate in care delivery

spirin use hen appropriate
f the people ho have had a heart attac or stro e are ta ing aspirin

Blood pressure control
T ffi a egie. e hypertension have ade uately controlled blood pressure

Cholesterol management
f the people ho have high levels of bad cholesterol are managing it effectively

Smoking cessation treatment
Of current smokers, 70% get counseling and/or medications to help them quit

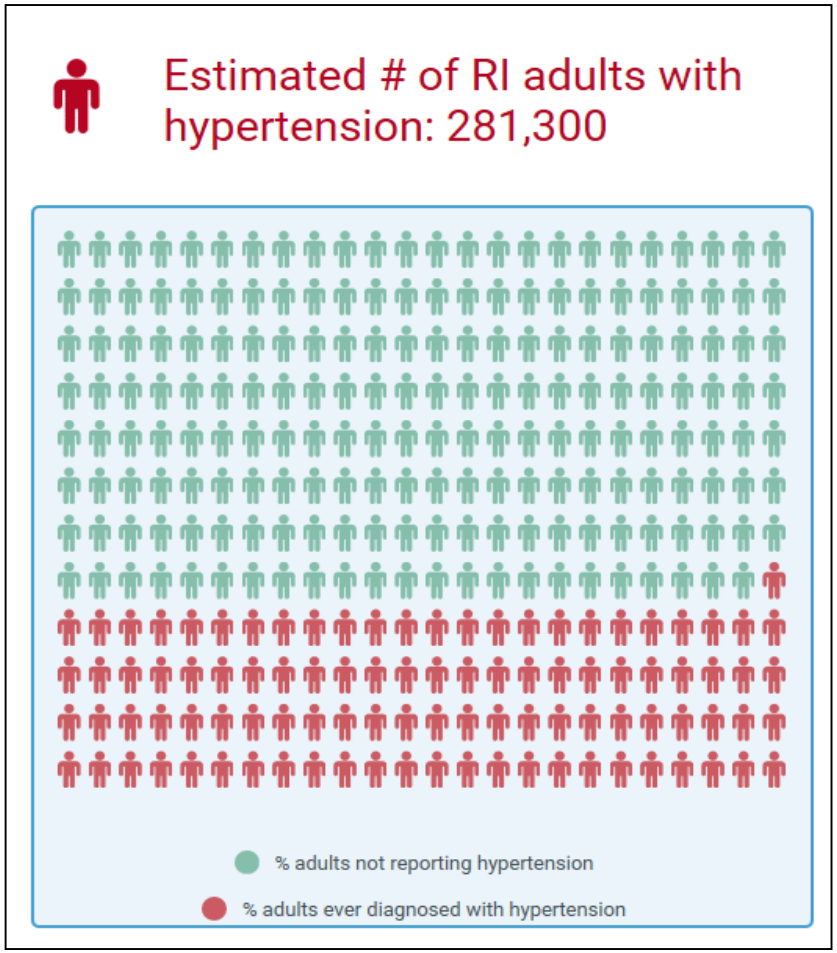
Million Hearts® promotes clinical and population-wide targets for the ABCS. The 70% values shown here are clinical targets for people engaged in the health care system. For the U.S. population as a whole. the target is 65% for the ABCS.

1 in 3 RI Adults has High Blood Pressure



In the U.S.	
Prevalence of hypertension	29.0%
% uncontrolled	53.5%
Of the uncontrolled, % unaware of having hypertension	40.0%

Rhode Island Chronic Care Collaborative

- 14 Practices
  - Federally Qualified Health Centers
  - Hospital Based Clinic
  - Free Clinic
- Work includes
  - Review data
  - Plan-Do-Study Act cycles
  - Network/ share
  - Submit progress reports

Rhode Island Chronic Care Collaborative

- Hypertension Control is a Priority
- Accurate Blood Pressure Measurement
- Evidence-based guidelines and protocols
- Facilitate Patient Self-Management
  - Goal Setting, Self-Measured Blood Pressure
- Team Based Care
- Technology
  - EMR assessment/ workflow analysis

Accurate Measurement

Accurate Measurement

	Possible effect on systolic blood pressure
Cuff too small*	+10-40 mm HG *Most Frequent Error is wrong cuff size, especially too small
Cuff too large *	-5-25 mm HG
Cuff placed over clothing	+/- 10-40 mm HG
Arm above heart level	+2 mm/ hg per inch above heart level
Arm below heart level	+ 2 mm/ hg per inch above heart level
Feet not flat on floor	+ 5 – 15 mm/hg
Back not supported	+6 mg/HG (diastolic)
Legs crossed	+ 5-8 mm/HG
Patient doesn't rest 5 minutes before	+ 10-20 mm/Hg
Patient talking	+10- 15 mm/Hg
Full bladder	+10- 15 mm/Hg
Tobacco or Caffeine Use	+6-11 mm/Hg

Source: Improving the Screening, Prevention and Management of Hypertension. An Implementation tool for Clinical Practice Teams. Washington State Department of Health.

Self-Measured Blood Pressure

- 5 RICCC practices focus on SMBP:
  - Provide BP monitor
    - Developed written agreements
  - Teach patient how to SMBP
    - Utilize AMA checklists
  - Provide Instruction on how to follow up
    - Frequency to take measurements
  - Record & utilize home measurements

Undiagnosed Hypertension

Identify and develop a system to follow up with:

- Patients: ≥ 2 blood pressure readings ≥ 140 mmHG and/ or ≥90 mmHG
  - 2 separate visits, including the most recent
- No diagnosis of hypertension

Definition	Percent of patients who do not have a diagnosis of hypertension with two or more blood pressure readings ≥ 140 mmHg SBP and/or ≥90 mmHg DBP.
Numerator	Patients in the denominator who have systolic blood pressure ≥140 mmHg and/or diastolic blood pressure ≥90 mmHg at **two** separate medical visits, including the most recent visit, during the past 12 months.
Denominator	Active patients* age 18-85 years old who do not have a diagnosis of hypertension and were seen during the last 12 months.
Exclusions	Patients less than 18 years of age • **Patients diagnosed with Hypertension** (ICD-9: 401.xx; ICD-10 codes: I10) • Pregnancy (ICD-9 codes – 630.xx-679.xx, V22.xx, V23.xx, V28.xx; ICD-10 codes: O00.1 – O9A.519, Z33-Z36) • ESRD: ICD-9 code: 585.6x; ICD-10 code: N18.6

WISEWOMAN

Well-Integrated Screening and Evaluation for WOMen Across the Nation

-CDC Funded Program

-Additional services for WCSP

-Screenings, medical evaluation, health coaching, lifestyle programs

TEAMWorks

- Group visits for hypertension, diabetes, or CVD
- TEAMWorks Health Care Provider office
  - Provider (MD, PA, NP)
    - group presentation, and one-on-one with patient, if applicable
  - TEAMWorks pharmacist
    - individual assessment
  - TeamWorks dietitian

How to Overcome Barriers

Community Health Workers

- Training on Hypertension & Diabetes
  - Initial focus is on CHW's who work with health care practices
  - Community Health Workers will:
    - Support patients with high blood pressure/ diabetes
    - Refer patients to community resources

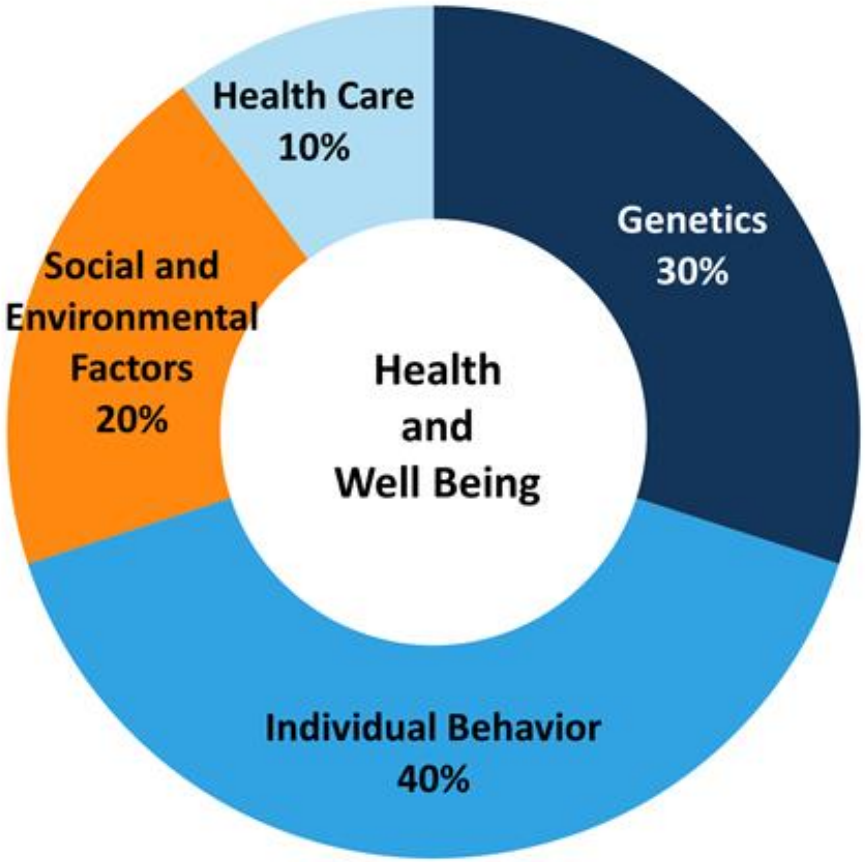
Coordinate Cessation Services

- Smokers' Quitline 1-800-QUIT-NOW
- QuitWorks – Provider Based Referral System
- Community Health Network: Centralized Referral System
- Statewide Community Based Program for Uninsured

HARD, YES. IMPOSSIBLE, NO.

Insured or uninsured, trying to quit or helping a smoker quit, we can help.

Impact of Different Factors on Risk of Premature Death



Source: Schroeder, SA (2007). We Can Do Better- Improving the Health of the American People. NEJM. 357:1221-8
Located at: http://kff.org/disparities-policy/issue-brief/beyond-health-care-the-role-of-social-determinants-in-promoting-health-and-health-equity/

Rhode Island Smoke Free Public Places & Workplaces Law

"Public Health and Workplace Safety Act" passed in June 2004. Exemptions: Casinos, Smoking Bars, outdoor spaces such as beaches and parks.

- There is no risk-free level of exposure to secondhand smoke exposure. Secondhand Smoke is a US EPA Class A Carcinogen.
- Exposure to secondhand smoke leads to stroke, nasal irritation, lung cancer, coronary heart disease and reproductive issues in adults. SHS exposure is now known to increase the risk of strokes in nonsmokers by up to 30%.
- Secondhand smoke exposure is higher among people with low incomes. Most exposure to secondhand smoke occurs in homes and workplaces.
- Secondhand smoke drifts from unit to unit through air ducts, under doors, holes for piping, electrical outlets, wall and ceiling fixtures, exterior windows, and other pathways.

http://www.cdc.gov/tobacco/data_statistics/fact_sheets/secondhand_smoke/general_facts/

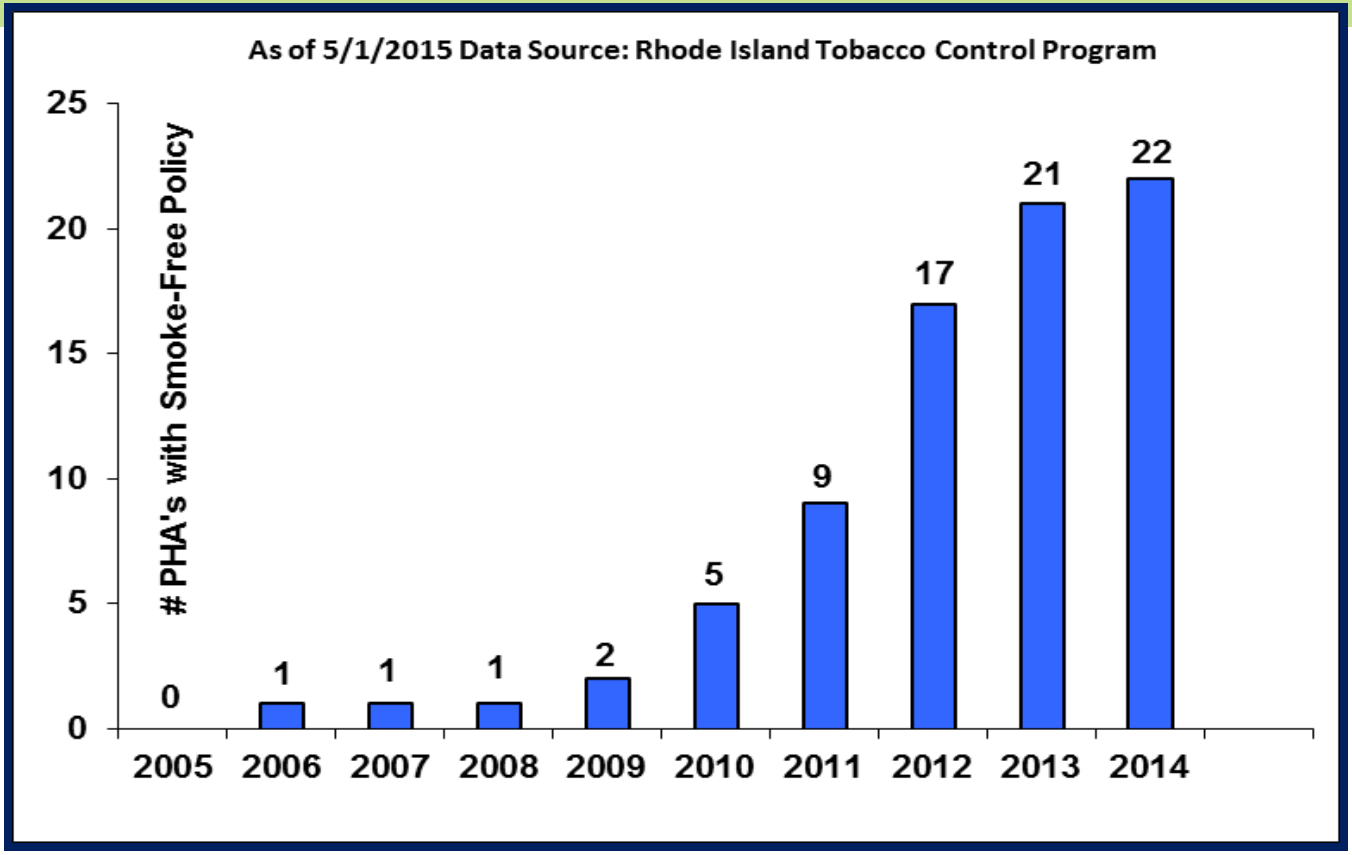
Live Smoke Free Program

Live Smoke Free Campaign launch 2011

- Campaign kick off using traditional and social media.
- Live Smoke Free web site with downloadable, property manager & resident toolkits, fact sheet and publications.
- Individual technical assistance for PHAs, boards, resident councils and affordable property management groups.
- No cost quarterly workshops for all property types.
- Scope expanded to include smoke free beaches, parks and tobacco free college campuses.

www.livesmokefree.ri.gov

Rhode Island Smoke Free Public Housing Authorities



Description	PHAs with smoke free policies	All PHAs in state
Number of PHAs	22	25
Number of Units	9266	9467
Number of residents	15436	15686

Health Equity Zone (HEZ) Goals

- Defined geographic location; place-based
- Use of local assessments to establish baseline;
- Community assets mapping and community readiness;
- Collective impact framework;
- Sustainability

- HEZ are contiguous geographic areas that have measurable and documented health disparities, poor health outcomes, and identifiable social and environmental conditions to be improved.
  - HEZ must be “small” enough so the plan of action/interventions can have a significant impact on the population (5K minimum)

Health Equity Zone (HEZ) Goals

- Improve health of communities with high rates of illness, injury, chronic disease, or other adverse health outcomes
- Improve birth outcomes
- Reduce health disparities
- Improve the social and environmental conditions of the neighborhood
- Support the development and implementation of policy and environmental change interventions

Addressing Nutrition

CATEGORY	DAILY	3 MEALS, 2 SNACKS		3 MEALS, NO SNACK	PREPARATION
		PER MEAL	PER SNACK	PER MEAL	
TOTAL KCALS	1,500-2,000 kcals (average low-average high)	550 kcals	175 kcals	670 kcals	The daily recommended intake is 3 meals, 2 snacks with calories (kcals) distributed evenly across meals (breakfast, lunch, and dinner). Meal breakdown recommendations are based on a 2,000 kcal diet.
SODIUM	≤ 2,000 mg	≤ 550 mg	≤ 175 mg	≤ 660 mg	Avoid processed and preserved foods to limit sodium levels. Utilize spices and fresh herbs as much as possible.
CHOLESTEROL	≤ 250 mg	≤ 65 mg	≤ 28 mg	84 mg	Replace or eliminate high cholesterol foods in your recipe with lower cholesterol options like egg whites and lean cuts of meat.
CARBOHYDRATES	55% of daily caloric intake (210-275 g for 1500-2000 kcal diet)	50-60 g (1.5-2 oz)	15-30 g (0.5-1 oz)	100 g (≤ 3.5 oz)	When at all possible, use complex carbohydrates; no fried, high sugar foods.
DIETARY FIBER	≥ 30 g	≥ 7 g	≥ 4.5 g	≥ 10 g	Choose ingredients high in fiber whenever possible.
TOTAL FAT	30% of daily caloric intake (50-67 g for 1500-2000 kcal diet)	≤ 20 g	≤ 12 g	≤ 28 g	Using low-fat proteins and finishing with fats that are liquid at room temperature helps to reduce the total fat in a dish.
SATURATED FAT	≤ 10% of daily caloric intake for fat (5-7 g for 1500-2000 kcal diet)	≤ 2 g	≤ 1.2 g	≤ 3 g	Low saturated fat items should be used whenever possible substitute liquid fats and oils listed below when possible.
TRANS FAT	0% added trans fats	0% added	0% added	0% added	Certain foods naturally contain trans fats; additional trans fats should not be added due to associated increase of LDL cholesterol.
LIQUID FATS AND OILS	2-3 tsp (34-45 g)	9-12 g	3.5-4.5 g	12-15 g	Use monunsaturated, and polyunsaturated fats like olive, peanut, canola, corn, soybean, safflower, and sesame oils.
ADDED SUGAR	< 5 Tbsp (75 g) per week	1 Tbsp (15 g) per day	none	1 Tbsp (15 g) per day	Limit added sugars to any meal. If needed, add sugar to one meal in total menu for day.
FRUITS & VEGETABLES	12-16 oz (350-454 g) fruit, 20-24 oz (567-680 g) vegetables, variety of colors and types	8-10 oz (227-285 g)	4-5 oz (136-142 g)	11-13 oz (312-369 g)	50% of meal should be a variety of colorful, low starch fruits and/or vegetables. Potatoes, corn, and other starchy vegetables should be counted as carbohydrates.

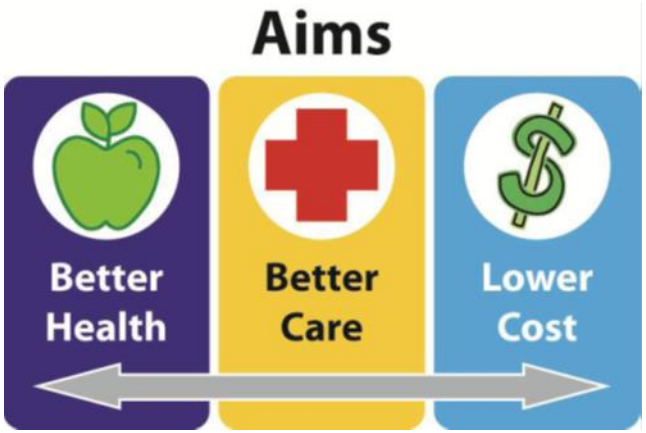
QIN-QIOs

- CMS's QIO Program Approach to Clinical Quality – **Triple Aim**:



- QIN-QIOs are regional, multistate entities providing services to **2 to 6 states for 5 year contracts**
- Highly competitive proposal process - **only 14 QIN-QIO contracts were awarded**

This material was prepared by the New England Quality Innovation Network-Quality Improvement Organization (QIN-QIO), the Medicare Quality Improvement Organization for New England, under contract with the Centers for Medicare & Medicaid Services (CMS), an agency of the U.S. Department of Health and Human Services. The contents presented do not necessarily reflect CMS policy. 11SOWQIN-B1_201608_0678

Quality Improvement Organizations
Sharing Knowledge. Improving Health Care.
CENTERS FOR MEDICARE & MEDICAID SERVICES

NEW ENGLAND QUALITY INNOVATION NETWORK
Administered By Healthcentric Advisors in Partnership with Qualidigm

New England QIN-QIO

- Two successful QIOs *pool expertise and resources* to engage beneficiaries and providers **in improving care, improving health and reducing costs across New England**

- Identified throughout six-state region as:

New England QIN-QIO

- Led and administered by **Healthcentric Advisors**
  - Focus areas: MA, ME, RI

- Partner – **Qualidigm**
  - Focus areas: CT, NH, VT

Cardiac Health

Cardiac Health Task Goals

Improve Cardiac Health implementing Million Hearts® ABCS:

- **A**spirin therapy
- **B**lood pressure control
- **C**holesterol control
- **S**moking cessation

- Reduce Cardiac Healthcare Disparities

Cardiac Health Task Goals

Increase Electronic Data Reporting

- Physician Offices
  - 8 practices (30 providers)
  - The Physician Quality Reporting System (PQRS)

- Home Health Agencies
  - 14 HHAs
  - HHQI National Cardiovascular Data Registry

Improvement Strategies

- Implement Team Care Model
- Data capture
- Actionable data analysis
- Workflow evaluation and redesign
- PDSAs to mitigate barriers
- Sharing Million Hearts & HHQI tools & resources
- Spreading best practices

Case Study

Internal Medicine practice

- EHR- PQRS reporting on HTN control
- PCMH
- 6 Providers
  - 5 providers scoring well above the state median (65%)
  - 1 provider scoring below state median (60%)

Interventions

- Team engagement
- Education on proper technique
- Correction to documentation
- BP at every visit not just annual exam
- Outreach calls for follow-up visits
- BP Action Plan Information sheets for pts

Case Example HTN Control

	12/3/2015	3/31/2016	6/30/2016
Percentage	60.60%	67.20%	75.60%

Sustainability

- Continue quarterly data analysis
- Continue BP at every visit
- Increase pt engagement
  - Shared decision making
  - Action plans
- Follow-up visits
- Team Engagement

Q & A

Overview of the American Heart Association and Programs and Resources that align with Million Hearts®

American Heart Association | American Stroke Association

life is why™

American Heart Association | American Stroke Association
life is why™

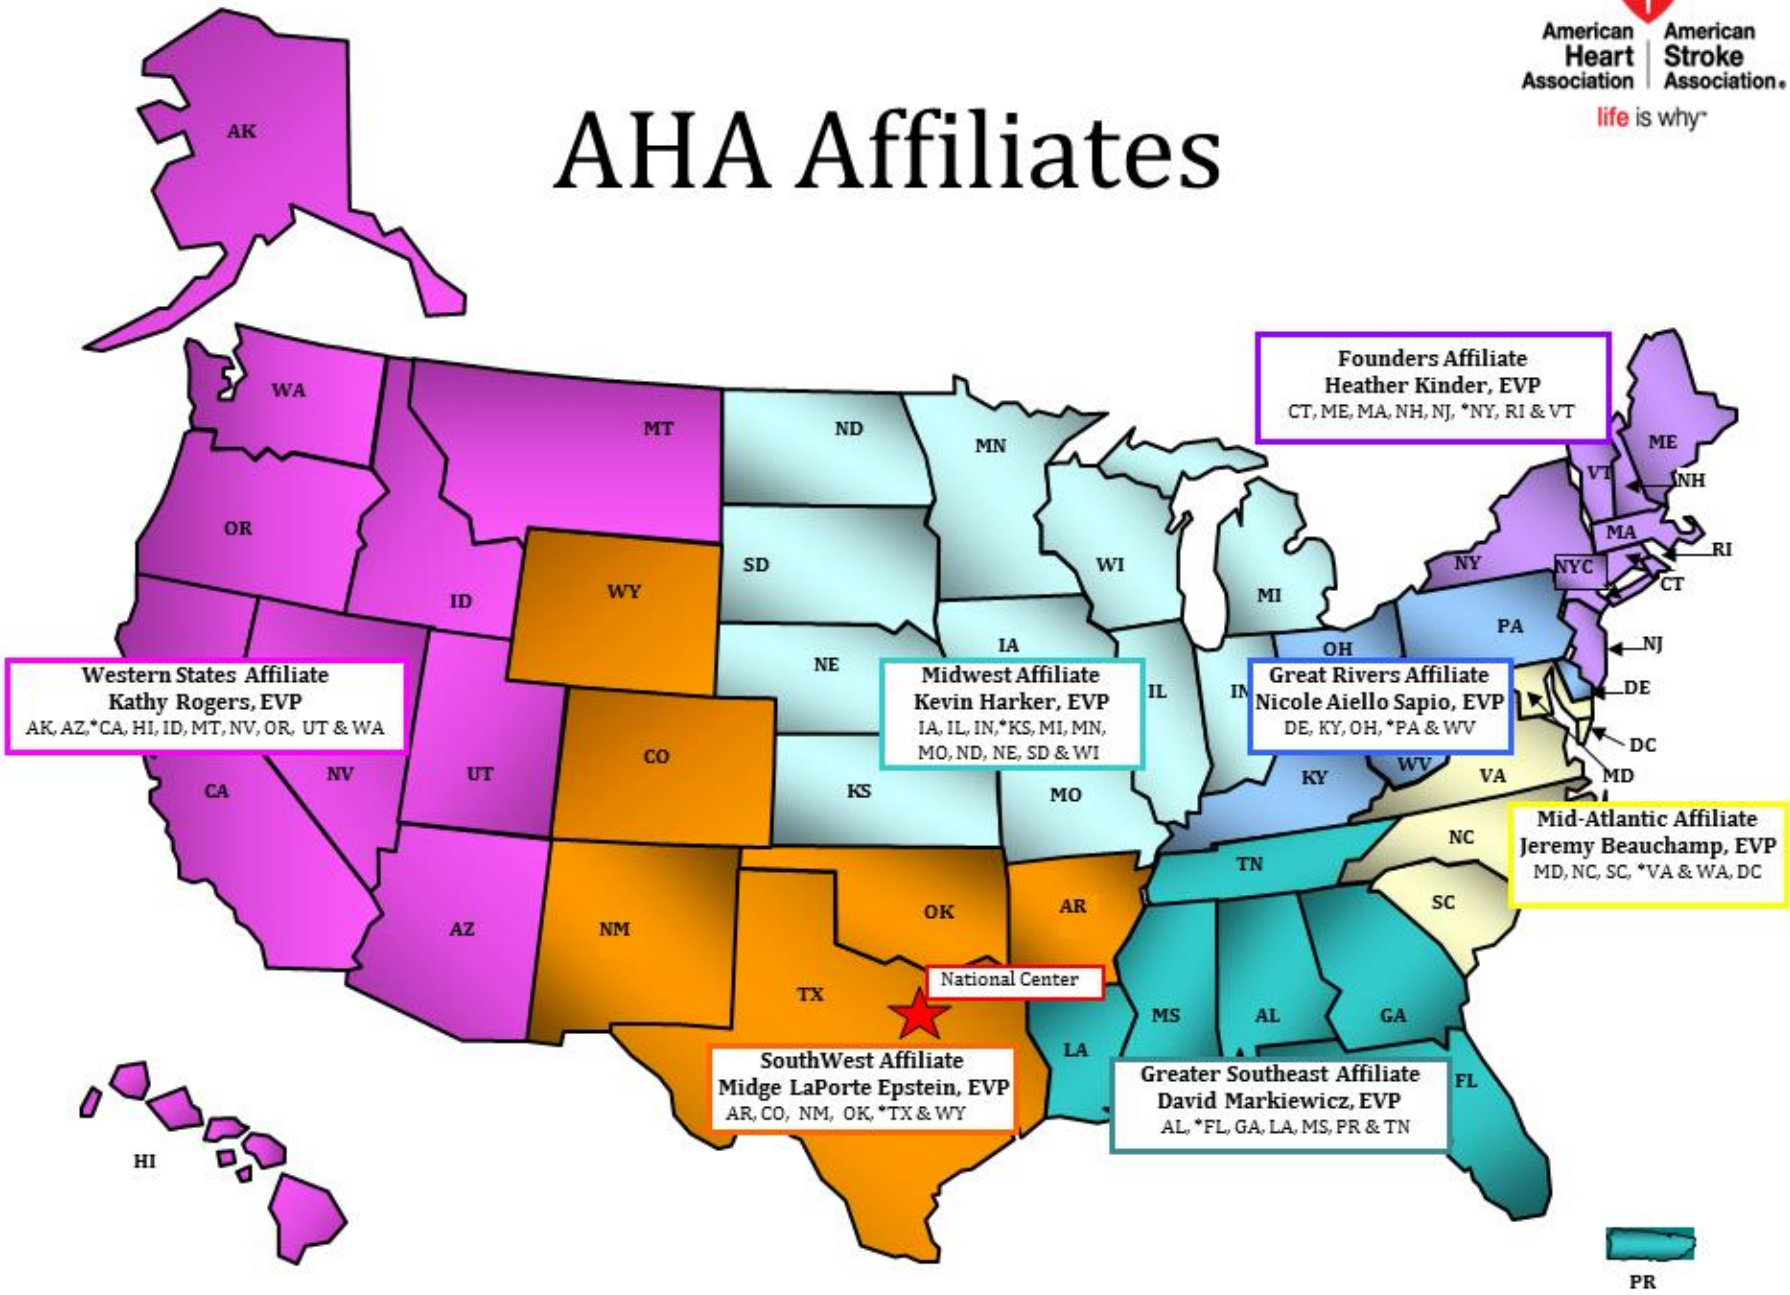
Mission

Building healthier lives, free of cardiovascular diseases and stroke.

Our 2020 Impact Goal

By 2020 to improve the cardiovascular health of all Americans by 20% while reducing deaths from cardiovascular diseases and stroke by 20%.

AHA Affiliates



Building a Culture of Health

A culture in which people live, work, learn, play and pray in environments that support healthy behaviors, timely quality care and overall well-being.

AHA and Million Hearts® Spotlight on Rhode Island

Advocacy Priorities

- Healthier Food Choices in Public Places
- School Marketing
- Physical Education
- Bikeway Development
- Tobacco Control Funding
- Tobacco 21

AHA and Million Hearts® Spotlight on Rhode Island

Target BP

- Nationwide initiative to help healthcare providers and patients achieve better blood pressure control at the best levels to improve health
- Support physicians and care teams in helping their patients with high blood pressure reach a blood pressure goal of lower than 140/90 mm Hg, based on current AHA guidelines

AHA and Million Hearts® Spotlight on Rhode Island

Target BP

- Health Impact: Driving toward moving 13.6 million individuals from uncontrolled to controlled blood pressure, through Federally Qualified Health Centers (FQHC) and clinics serving underserved/vulnerable populations and clinics within large healthcare systems.

AHA and Million Hearts® Spotlight on Rhode Island

Multicultural Health Priorities/Target BP

- Increase # of registered FQHCs and clinics
- Increase # of adult patients reached

AHA and Million Hearts® Spotlight on Rhode Island

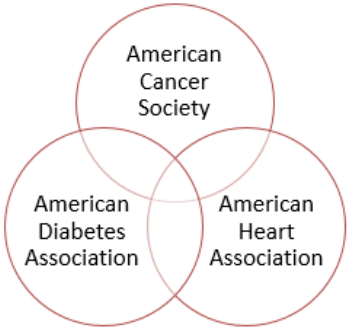
Multicultural Health Priorities/Target BP

- Face to Face meeting with clinical lead
- Provide trainings on Target: BP tools and resources
- Equip clinics with consumer education tools
- Connect clinics to community-based programs for self-monitoring like Check. Change. Control.
- Consulting services provided
- Clinical lead or team invited and attending workshop/ webinar or hospital recognition event

The Guideline Advantage (TGA)

THE GUIDELINE ADVANTAGE

The Tri-Agency Relationship



- A joint program of the American Cancer Society, the American Diabetes Association, and the American Heart Association
- Each organization has long developed scientific statements and guidelines specific to prevention and disease management
- Shared goals:
  - Sets national goals and objectives that compliment their guidelines
  - Common interest in translating those guidelines into practice

THE GUIDELINE ADVANTAGE

Advantages to Practices & Physicians

- Qualified Clinical Data Registry (QCDR) and Specialized Clinical Data Registry for Meaningful Use Stage 2
- Comprehensive Data Assistance
- AHA Quality & Systems Improvement Consultation and expertise
- State-of-the-art population health management technology
- Clinic and system aggregation, with available physician-level reporting
- Tools for creating action lists
- Alignment with key national initiatives
- National and State Benchmarking
- Quality Improvement Community

TGA Fact Sheet

- Million Hearts Measures in TGA: High Blood Pressure Control, Tobacco Use Screening, Tobacco Use Cessation Intervention, Ischemic Vascular Disease Use of Aspirin or Other Antithrombotic

- New as of Aug 8, 2016 – physicians at TGA participating practices may now receive Maintenance of Certification Improvement in Medical Practice (Part IV) credit for their engagement

Tools and Resources

- AHA online tools:
  - Heart 360
  - My Life Check®
  - Heart Attack Risk Calculator
- Sodium Leadership Community
- Multi-Cultural/Faith-based Initiatives: EmPowered to Serve
- Get With The Guidelines (TGA) hospital-based quality improvement program
- Communications
- Healthy Workplace Food & Beverage Toolkit
- You're the Cure – www.yourethecure.org

Discussion

1. Is there a program you were unaware of that you would like to explore further for implementation or application in the state?
2. On which topics would you like additional information?
3. Other questions

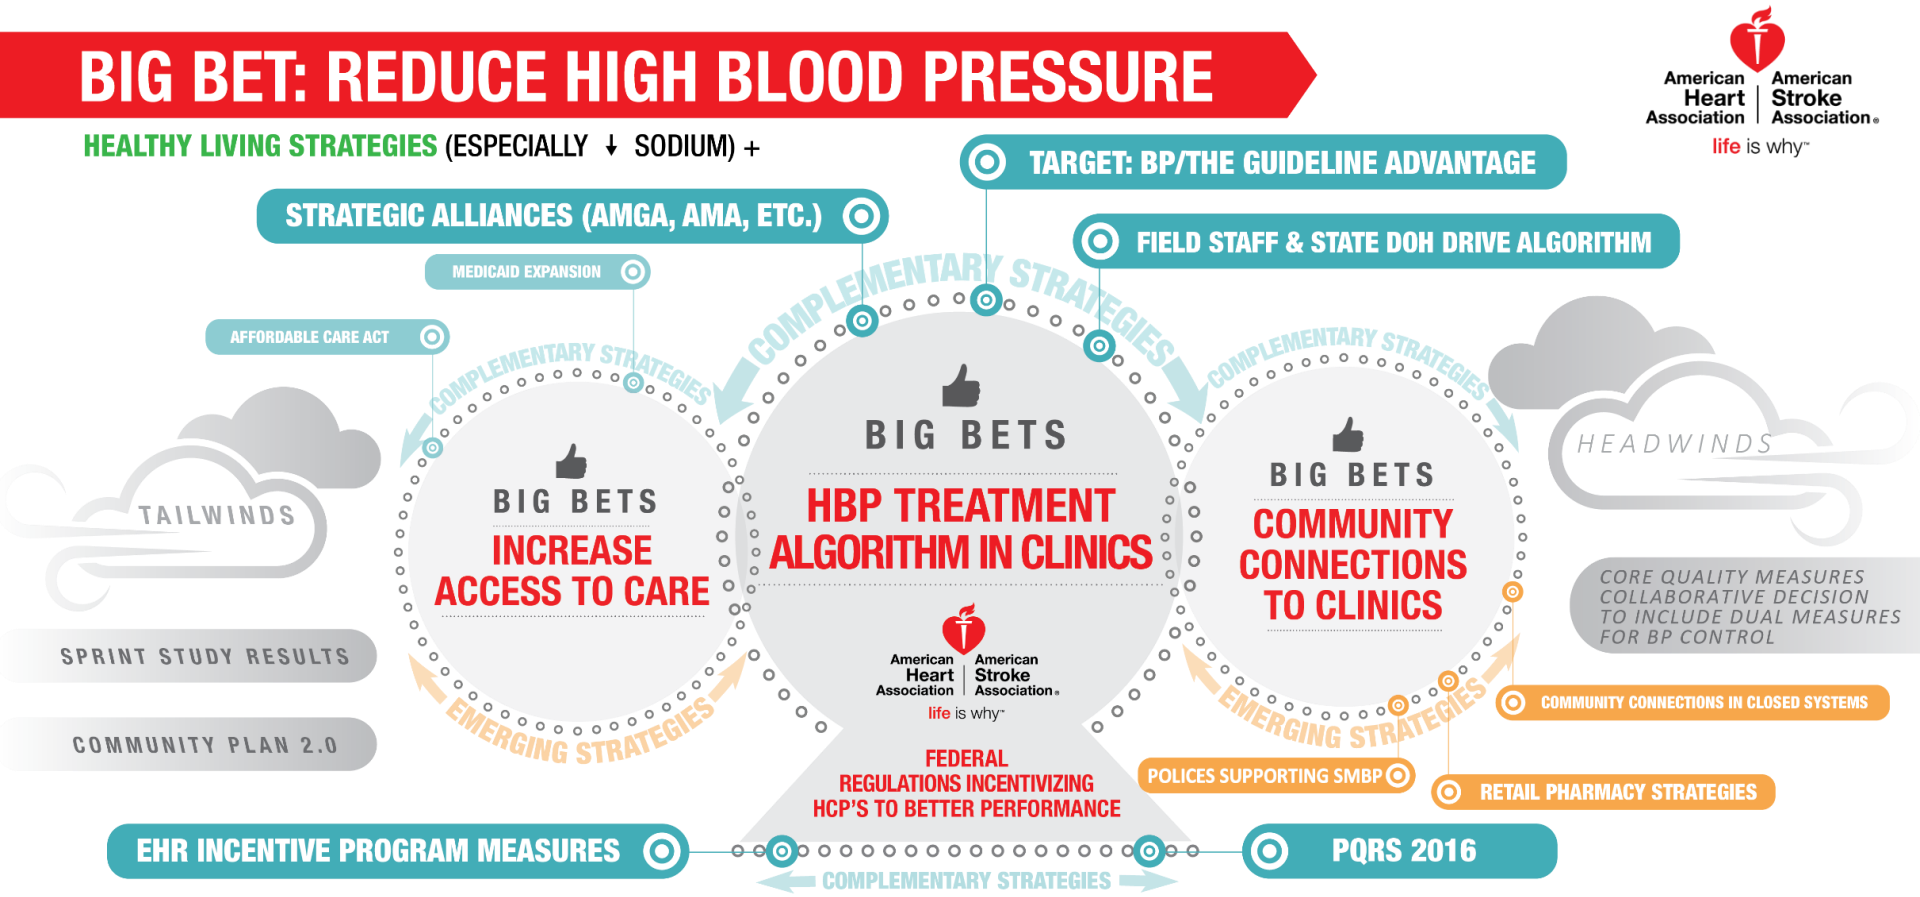
BIG BET: REDUCE HIGH BLOOD PRESSURE



Check. Change. *Control.*™

Building a Sustainable HBP Program

Clinical Pharmacists
2008 – 2010

- ✓ Remote Monitoring Study via Kaiser Clinical Pharmacists
- ✓ Six month SBP control significantly higher than control group. Suggests healthcare cost saving

Community Settings
2010 - 2011

- ✓ Check It. Change It. Community-based intervention in Durham County
- ✓ In patients that began the study with a BP of > 150/90, systolic BP decreased by 24.2 mmHg and diastolic BP decreased by 10 mmHg.

Enlisting Partners
2012 - Present

- ✓ AHA joined with Million Hearts to host a forum that included partners across industries positioned to impact the issue of HBP
- ✓ Initial meeting was the impetus for the launch of AHA's HBP Leadership Community based on attendees' desire to continue the innovation, sharing and exchange of solutions

Innovation in the Field
2012 - 2013

- ✓ Check It. Change It. set the stage for larger, community-based model run by the AHA focused on high-risk pop.
- ✓ Grants to local market staff designated for rapid development, execution and testing of programs using partners and volunteers.
- ✓ Similar results to Check It. Change It. Lowering BP by 5 mmHG, with more significant drops between 11mmgHG and 26 mHG in high risk groups

CHECK IT CHANGE IT
The Durham Blood Pressure Challenge

Check. Change. Control.™

American Heart Association | American Stroke Association
life is why™

Why it Works: Key Evidence-Based Scientific Principles

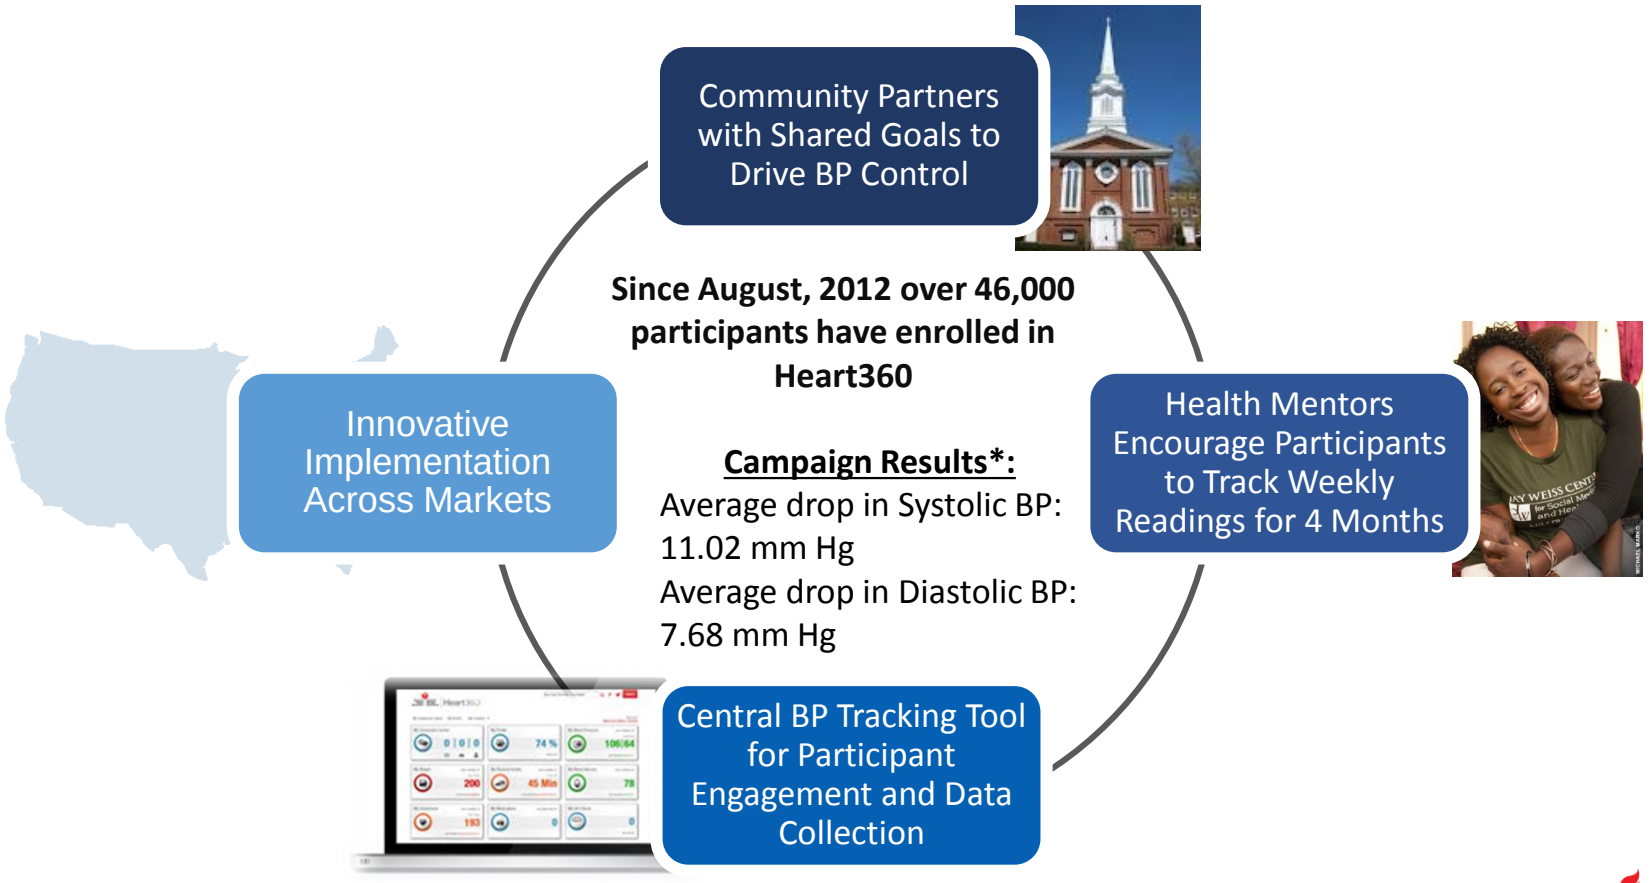
Self Monitoring Makes a Difference
Proven track record for taking blood pressure readings at home or outside of the healthcare provider office setting.

- Use of digital self-monitoring and communication tool
- Charting & tracking improves self-management skills related to blood pressure management

Personal Interaction Makes a Difference
Health mentors can motivate and encourage participants.

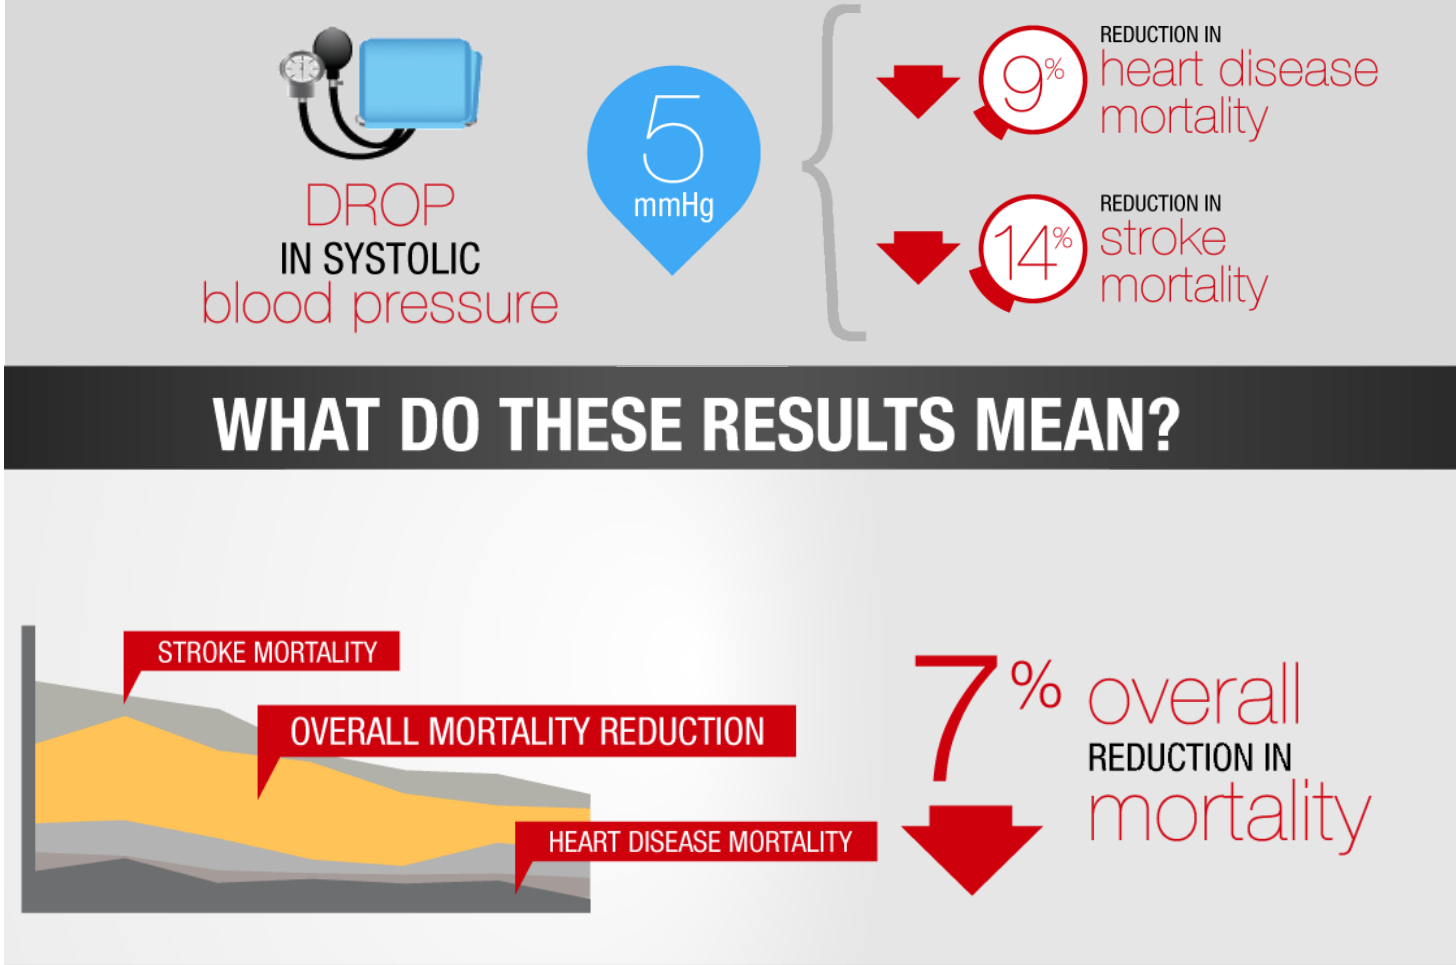
Multicultural Program Investments Make a Difference
Hypertension creates a health disparity for African-Americans.

Program Components



Benefits extend even with partial engagement:

Even those participants who did not meet the full retention criteria saw declines in BP numbers.



American Heart Association®
life is why™

AMA
AMERICAN MEDICAL ASSOCIATION

TARGET: BP™

Target: BP *is a national movement aimed at improving blood pressure control, to reduce the number of Americans who have heart attacks and strokes. Target: BP provides physician practices and health systems resources and support to achieve a 70% blood pressure control rate with a* ***target*** *of achieving 80% or higher.*

Why launch Target: BP now?

SPrINT study results

Increased access to care

Policies incentivize HCP's to better control

AHA 2020 goals are imminent

Synergizing with Million Hearts program

American Heart Association | American Stroke Association

life is why™

What is Target: BP?

- A call to action motivating hospitals, medical practices, practitioners and health services organizations to prioritize blood pressure control
- Recognition for healthcare providers who attain high levels of blood pressure control in their patient populations, particularly those who achieve 70 or 80 percent control
- A source for tools and assets for healthcare providers to use in practice, including the AHA/ACC/CDC Hypertension Treatment Algorithm and the AMA's M.A.P. Checklist

FAST FACTS

M.A.P. (Measure accurately. Act rapidly. Partner with patients, families and communities.)

Protocols to guide evidence-based prescribing

Did you know?

National experts recommend that clinical teams use hypertension treatment protocols to manage patients with hypertension.[1] Just as a football team's playbook describes what players should do during a play, a treatment protocol clearly spells out what a care team should do.

Why are protocols important?

Studies show that getting blood pressure under control quickly reduces the risk for heart attacks, strokes and even death.[2] Treatment protocols help clinicians and staff work together as a team to identify which patients to treat, when to treat them, what medications to use, what the target blood pressure should be and how often follow-up should occur.[3] However, it is important to note that clinicians should not use a protocol to replace sound medical decision-making for a given patient's unique situation.

Where can you find examples of evidence-based treatment protocols to use?

If your organization has not already developed an evidence-based treatment protocol, the Million Hearts® initiative has a Web page containing several examples of evidence-based treatment protocols for improving blood pressure control. Located at http://millionhearts.hhs.gov/resources/protocols.html, these evidence-based treatment protocols help the clinical team to address:

- **When** patients should receive treatment
  - Establish treatment initiation cut points—In the case of the Million Hearts® interactive protocol for controlling hypertension in adults, the treatment initiation cut off is set at ≥140/90 mm Hg for most patients.
- **What** evidence-based treatment patients should receive
  - Evidence-based lifestyles changes—such as losing weight, using the dietary approaches to stop hypertension (DASH) eating plan or engaging in regular aerobic exercise—can reduce a patient's systolic blood pressure by 10–15 mm Hg.
  - Four medication classes are recommended for most patients: thiazide diuretics, calcium channel blockers, and either ACE inhibitors or ARBs, but **not** both.
  - Single-pill combination therapy is recommended for patients with high blood pressure, especially those with a blood pressure of 160/100 mm Hg or higher.
  - Most patients (up to 90 percent based on the ALLHAT Trial) should be able to achieve blood pressure control by taking one to three medications.[4]
- **How** a practice or health center should follow up after treatment begins
  - Early and frequent follow-up (every two to four weeks) is recommended so that patients can be advised to rapidly adjust or fine-tune their treatment until their blood pressure is controlled.
  - Keep in mind that follow-up does not always have to mean a visit with a primary care provider. Many practices or health centers have built successful follow-up programs around self-measured blood pressure monitoring or drop-in blood pressure checks with medical assistants or RNs.

Always make sure patients know what to do should they have a blood pressure measurement that is outside the pre-determined acceptable range or if they experience any symptoms with a high or low blood pressure measurement, including seeking emergency treatment if appropriate. This guidance to the patient should be individualized by the clinician and reinforced by clinical staff at the initiation of any SMBP monitoring program.

Elements Associated with Effective Adoption of Protocols

Practice Team-Base Care

- Make hypertension control a priority.
- Fully use the expertise and scope of practice of every member of the health care team.
- Include the patient and family as key members of the team.
- Learn about community resources and recommend them to patients.
- Conduct pre-visit planning to make the most of the care encounter.
- Look for opportunities to check in with patients between visits and adjust medication dose as needed.

Control Is Their Goal: Million Hearts Recognizes the 2015 Hypertension Control Champions

18 Champions are being recognized for achieving high rates of blood pressure control for their patients.

Press Release

For immediate Release: Thursday, May 5, 2016

Contact: Media Relations
(404) 639-3286

The 2015 Hypertension Control Champions used evidence-based strategies and patient engagement to help their patients achieve blood pressure control rates at or above the Million Hearts target of 70 percent. The 18 Champions, ranging from small practices to large health care systems throughout the U.S., provide care to nearly 1.5 million adults.

“Clinicians are our first line of defense against the hundreds of thousands of deaths caused by high blood pressure each year,” said CDC Director Tom Frieden, M.D., M.P.H. “We applaud the 2015 Champions and hope other health care teams learn from these successes and save even more lives.”

Nearly 1 in 3 American adults has high blood pressure, a leading cause of heart disease and stroke. Nearly half of adults with high blood pressure do not have their condition under control. Even more alarming, millions of Americans have high blood pressure that is undiagnosed or untreated. High blood pressure may also contribute to the development of dementia. The U.S. Department of Health and Human Services launched the Million Hearts national initiative, with public and private partners, in 2011.

The 2015 Million Hearts Hypertension Control Champions are:

- AHRC Health Care Inc. (dba Access Community Health Center); New York City
- Albany Area Primary Health Care Inc.; Albany, Georgia
- Altru Health System; Grand Forks, North Dakota
- Atrius Health; Newton, Massachusetts
- Baltimore Medical System at Middlesex; Baltimore
- Hamakua Kohala Health; Honokaa, Hawaii
- International Community Health Services; Seattle
- Jason Infeld, M.D., FACC, Stern Cardiovascular Foundation; Germantown, Tennessee
- Kaiser Permanente Georgia and The Southeast Permanente Medical Group; Atlanta
- Kelsey-Seybold Clinic; Pearland, Texas
- Mercy Clinic East Communities; St. Louis, Missouri
- OHSU Family Medicine at Richmond; Portland
- Petaluma Health Center; Petaluma, California
- Reliant Medical Group; Worcester, Massachusetts
- Thundermist Health Center; Woonsocket, Rhode Island
- Unity Family Medicine at St. Bernard’s; Rochester, New York
- WESTMED Medical Group; Purchase
- Zufall Health Center; Dover, New Jersey

Saving lives through better blood pressure control has been a longstanding CDC priority. By recognizing the Champions' performance and sharing their lessons learned, CDC aims to help other health care professionals achieve the same success in communities nationwide.

"We are excited to host this Challenge and showcase successful strategies used by our 2015 Champions to keep blood pressure under control, prevent heart attacks and strokes, and save lives," said Janet Wright, M.D., a board-certified cardiologist and executive director of Million Hearts.

"Health care teams can follow our Champions' lead to take steps to identify patients in their practice who are at risk for or who have high blood pressure and connect them to the care they need."

To be eligible, entrants shared verifiable high blood pressure control data and highlighted successful strategies and best practices adopted by the practice or system, such as the use of health information technology and team-based care. All Champions achieved control rates of 70 percent or greater for their adult patients by using a variety of approaches, including:

- Making high blood pressure control a priority
- Using evidence-based treatment guidelines and protocols
- Using health care teams to increase the frequency of contact with patients
- Implementing consistent, strategic use of electronic health records that include clinical decision support tools, patient reminders, and registry functionality
- Staying engaged with patients by offering free blood pressure checks and implementing the use of a patient navigator or care coordinator

Million Hearts is a national initiative to prevent 1 million heart attacks and strokes in five years. CDC co-leads Million Hearts with the Centers for Medicare & Medicaid Services. For more information about the initiative and to access resources, visit http://millionhearts.hhs.gov.

Tools and Resources

http://www.heart.org

Online Tools

- **Heart360** (www.heart360.org)– Heart360® is an easy-to-use tool which helps you understand and track the factors that affect your heart health - including blood pressure, physical activity, cholesterol, glucose, weight, and medications.

- **My Life Check** (http://tools.bigbeelabs.com/aha/tools/mlc/)
  Get a full heart health assessment with this tool based on many years of research.

- **High Blood Pressure Health Risk Calculator**
  (http://tools.bigbeelabs.com/aha/tools/hbp/)
  Enter your latest blood pressure reading to learn your risk of having a heart attack, a stroke, and developing heart failure and kidney disease. You'll also learn how a few lifestyle changes can lower your blood pressure and your health risks. You can print your risk report to review and discuss with your healthcare professional.

- **AHA's Smoking Cessation Tools and Resources**

Resources

- **The Guideline Advantage** (http://www.guidelineadvantage.org/)
  The AHA supports coverage of preventive benefits in private and public health insurance plans. The AHA will encourage states to cover CVD-related U.S. Preventive Services Task Force A and B benefits under Medicaid without cost sharing and achieve the 1% federal payment increase.

- **EmPowered to Serve**
  (http://www.empoweredtoserve.org/index.php/about/about-the-movement/)
  A multicultural initiative that works to influence faith-based as well as urban housing channels to build strategic alliances that support a "culture of health" through healthy living, enhancing the chain of survival, and improving the environment.

- **Check. Change. Control. (CCC)**
  (http://www.heart.org/HEARTORG/Conditions/HighBloodPressure/HighBloodPressureToolsResources/Check-Change-Control-Blood-Pressure-Program_UCM_449318_Article.jsp#.V5Jo6vIUX4h)
  This program empowers multicultural audiences to manage their blood pressure through a combination of resources and utilizes Heart360, a powerful online tool to help track health factors including blood pressure.

- **High Blood Pressure Algorithm**
  (http://www.heart.org/HEARTORG/Affiliate/UCM_481444/High-Blood-Pressure-Algorithm-Resource-Page_UCM_481444_SubHomePage.jsp)
  Developed in partnership with the Centers for Disease Control and American College of Cardiology, and is a critical tool focused on 8 principles for an effective, systemic and team-based formula for the healthcare setting.

Million Hearts® Resources

Resources for Clinicians:

- **Hypertension Control: Change Package for Clinicians**
  http://millionhearts.hhs.gov/files/HTN_Change_Package.pdf
  A quality improvement change package with a listing of process improvements that ambulatory clinical settings can implement as they seek optimal hypertension control.

- **Self-Measured Blood Pressure Monitoring: Action Steps for Clinicians**
  http://millionhearts.hhs.gov/files/MH_SMBP_Clinicians.pdf
  A guide to facilitate the implementation of self-measured blood pressure monitoring (SMBP) plus clinical support in preparing care teams to support SMBP, selecting and incorporating clinical support systems, empowering patients, and encouraging health insurance coverage for SMBP plus additional clinical support.

- **Evidence-Based Hypertension Treatment Protocols**
  http://millionhearts.hhs.gov/tools-protocols/protocols.html
  A webpage with a hypertension treatment protocol template and featured evidence-based protocols to help clinicians improve blood pressure control by clarifying titration intervals, revealing new treatment options and expanding the types of staff that can assist in a timely follow-up with patients.

- **Tobacco Cessation Protocol**
  A webpage with a tobacco cessation protocol template and featured evidence-based protocols to help clinicians identify patients who use tobacco and systematically deliver appropriate cessation services.
  http://millionhearts.hhs.gov/tools-protocols/protocols.html#TCP

- **Undiagnosed Hypertension**
  http://millionhearts.hhs.gov/tools-protocols/hiding-plain-sight/index.html
  A webpage that describes the phenomena of patients with uncontrolled hypertension being seen by clinicians, but remaining undiagnosed; resources, references and case studies are provided to help clinicians find their undiagnosed hypertensive patients.
  - **Hypertension Prevalence Estimator**
    https://nccd.cdc.gov/MillionHearts/Estimator/
    An interactive tool health systems and practices can use to start or build on their existing hypertension management quality improvement process by comparing the expected hypertension prevalence generated from the tool with their calculated prevalence.

- **Million Hearts® Clinical Quality Measures (CQM)**
  http://millionhearts.hhs.gov/data-reports/cqm.html
  A webpage that displays national clinical quality measures and targets focused on the Million Hearts® ABCS (Aspirin when appropriate, Blood pressure control, Cholesterol management, and Smoking cessation).

"Advancing Million Hearts®:
AHA and State Heart Disease and Stroke Prevention
Programs Working Together in Idaho"

Partners, Programs and Persons that Align, Ways to Work Together and Next Interactions
Idaho Facilitated Group Discussion Guide

Goal: Identify hypertension and other Million Hearts® related efforts in the state of Idaho

Overview of Task

- Please use the template on the second page to capture information you would like to share on your organization's hypertension and other Million Hearts related efforts in Idaho. You can also note initiatives and other ideas you have heard throughout the day of areas you would like to partner on or seek resources.

- You will be asked to share this information during the facilitated group discussion. This document will be collected to provide a summary to the group.

- The facilitator will be listening for this information throughout the day's presentations and will be capturing it on flip charts under three strategies: Undiagnosed Hypertension, Uncontrolled Hypertension, and Team Based Care. We will also have a flip chart for additional strategies.

- The point of this exercise to hear from you on your programs and interests and better understand what is happening in Idaho around hypertension. It is not meant to create additional work, but rather explore ways to partner or to form alliances but to help each other do our work better and to create synergies around the state.

- Once we hear from all partners, we will have an opportunity to note where we can collaborate with others to help scale and spread the work.

- Finally, we will have a discussion about the key areas noted as partnership opportunities and discuss additional resources and partners necessary to support this work.

- Facilitated Group Discussion Itinerary

1:20pm	Attendees complete ideas on the template.
1:30pm	Prioritization exercise/stretch break Attendees place circle stickers on areas/projects where their organization can see alignment and may want to partner. (Add name/organization on stickers.)
1:45pm	Discuss group priorities and how partners can align. This information is captured on a fourth flip chart (Coordination and Collaboration) identifying for each selected priority - what, who, and by when

Identifying Hypertension Efforts in Idaho

Partner/Organization Name _____
Individual Name _____
Role within your organization _____
Region (if applicable) _____

In the boxes below, please include the following:

1) Activities under each of the categories that you are currently working (focus on main priorities)
2) An area you may like to collaborate on moving forward
3) Resources/tools you have available for others

If you are not working on one of these areas, please feel free to leave it blank. If you have another main priority, feel free to use the space at the end.

Strategy: Identify Undiagnosed Hypertension

ACTIVITY	COLLABORATION / ENGAGEMENT OPPORTUNITIES	RESOURCES / TOOLS

Strategy: Team Based Care

ACTIVITY	COLLABORATION / ENGAGEMENT OPPORTUNITIES	RESOURCES / TOOLS

Strategy: Address Uncontrolled Hypertension

ACTIVITY	COLLABORATION / ENGAGEMENT OPPORTUNITIES	RESOURCES / TOOLS
