“We are truly blessed by the American Heart Association and American Stroke Association. Being a dual survivor of a stroke and a congenital heart defect, my life as I now know it is a result of their efforts. To a healthier tomorrow!”

Kirk Disrude, a PE teacher and coach in Park Ridge, Ill., who was the picture of good health when he had a stroke at 38, and while his wife Beth was 20-weeks pregnant with their first child. The stroke turned out to be caused by a hole in his heart he’d been born with, requiring surgery to close. Less than a year later, they ran the Chicago Marathon – Kirk’s first, Beth’s second. Throughout their training, they pushed newborn son Logan in a stroller.

“As a young stroke survivor, I want to change the way we view stroke in America to better enable successful reintegration into our communities. The American Heart Association provides a platform to voice my concerns among decision-makers at the local, state and national levels.”

Amy Edmunds, stroke survivor since 2002, spoke on behalf of the American Stroke Association during the Rally for Medical Research in Washington, D.C., to urge restored funding for the National Institutes of Health. During Lobby Day activities in April 2013, she also was featured in full-page advertisements in Politico and Roll Call.
from the chairman of the board and president

Improving the cardiovascular health of all Americans and reducing cardiovascular and stroke deaths are the driving motivation for the American Heart Association. Over the past year, our organization continued toward those goals while also laying a foundation of improved health for current and future generations.

Our forward focus was perhaps best emphasized by a revamping of our research portfolio and the creation of a CEO Roundtable. In both cases, we tapped into our strengths to build something even stronger. Research is the backbone of our organization, and a yearlong evaluation of our award portfolio led to the creation of four new categories. Through the CEO Roundtable, we are bringing together leaders from 24 of the nation’s largest and most influential corporations to ask and answer questions that can improve the health of workplaces and communities.

Preparing for the future also means investing in our youth. That’s why we are so pleased to have two new programs aimed at stamping out childhood obesity. And we have two great partners in these programs, with the Robert Wood Johnson Foundation collaborating with us on “Voices for Healthy Kids” and the William G. McGowan Charitable Fund collaborating on “Healthy Way to Grow.” We also are comforted in knowing that millions of teenagers will be trained to become lifesavers through new laws making CPR training a requirement for high school graduation. Our advocacy efforts also led to more states requiring that newborns get screened for heart defects with a simple, non-invasive pulse-oximetry device.

Of course, our primary focus remains a 20 percent improvement in cardiovascular health and a 20 percent reduction in cardiovascular and stroke deaths by the year 2020. The latest metrics on our 2020 Impact Goal show that we are on pace to reach the mortality goal. We are seeing health improvements in smoking and in cholesterol, but there’s still work to be done elsewhere. Our new campaign, Together to End Stroke, can help by increasing awareness that stroke is largely preventable, treatable and beatable.

Challenges remain, and we continue to embrace them. We take pride in the progress made during our tenure, and we are excited about the future under the new volunteer leaders.

from the chief executive officer

With volunteers like 15-year-old Tommy Watson of Vermont, the American Heart Association has ample reason for optimism about the future. Tommy received our 2013 Youth Advocate of the Year Award this spring for his efforts to advance CPR in Schools legislation. Just a few weeks later, he reached a personal milestone when he trained his 1,000th person in Hands-Only CPR.

As family and friends congratulated him on these achievements, Tommy was already setting his sights on his next goal: Training 2,000 people in Hands-Only CPR.

Tommy’s making an extraordinary impact on our nation’s health. His forward-thinking outlook is key to his success, and that same outlook is reflected in every one of our more than 22 million volunteers and supporters. Their actions, day after day, speak to the urgency they feel for our mission. As much as we accomplish, there is always more to do in the fight against heart disease and stroke.

Without our volunteers and supporters, we wouldn’t have been able to launch the unprecedented F.A.S.T. campaign, which has already helped millions of people learn how to spot signs of a stroke and call for help. Our 2014-17 Strategic Vision for Research was developed by science volunteers who contributed their knowledge and expertise to keep our research program at the vanguard of medical discovery. In communities across the country, volunteers organized events in their homes and workplaces to celebrate the 10th year of Go Red For Women.

We can point to these – and so many other significant steps forward – because our volunteers and supporters never stop setting new goals and dreaming new dreams. Here’s to the future!

about the american heart association

Who We Are: The American Heart Association is the nation’s oldest and largest voluntary health organization dedicated to fighting heart disease and stroke.

Founded by six cardiologists in 1924, our organization now includes more than 22 million volunteers and supporters. We fund innovative research, advocate for stronger public health policies and provide critical tools and information to save and improve lives.

Our nationwide organization includes 154 local offices and nearly 2,800 employees. We moved our national headquarters from New York to Dallas in 1975 to be more centrally located. The American Stroke Association was created as a division in 1997 to bring together the organization’s stroke-related activities.

Our Mission: Building healthier lives, free of cardiovascular diseases and stroke. Our mission drives everything we do.

What We Do: To improve the lives of all Americans, we provide public health education in a variety of ways. We’re the nation’s leader in CPR science, education and training. We help people understand the importance of healthy lifestyle choices. We provide science-based treatment guidelines to healthcare professionals to help ensure the best treatment for every patient, every time. We educate lawmakers, policymakers and the public as we advocate for changes to protect and improve the health of our communities.

Our volunteer experts select scientific research most worthy of funding – with great results. We have invested more than $3.5 billion in research, more than any organization outside the federal government. We have funded 13 Nobel Prize winners and many lifesaving research advancements such as the first artificial heart valve, cholesterol-inhibiting drugs, heart transplantation, and CPR techniques and guidelines.

Why We’re Needed: Heart disease is the No. 1 killer of Americans. Stroke ranks fourth and is a leading cause of severe disability. Far too many families are losing loved ones of all ages. Each year, these diseases kill more than 788,000 Americans, which is roughly the same as the entire population of Charlotte, N.C., or Fort Worth, Texas.

Some form of cardiovascular disease affects more than one in every three adult Americans. Many suffer terribly from disabilities caused by these diseases.

The American Heart Association wants everyone to understand the threat – and to know that cardiovascular diseases and stroke are largely preventable. Risks can be lowered by adhering to what we call Life’s Simple 7: not smoking, being physically active, maintaining a healthy body weight, eating a healthy diet, controlling blood pressure, controlling cholesterol and controlling blood sugar.

Our 2020 Goal: We are working toward improving the cardiovascular health of all Americans by 20 percent, and reducing deaths from cardiovascular diseases and stroke by 20 percent, all by the year 2020.

Our programs, educational resources and advocacy initiatives are all targeted at helping people identify and adopt healthier lifestyles.

To assess your cardiovascular health, all you need to do is visit MyLifeCheck.org and answer a few questions. You will learn about modest changes that could make major differences.

For more information, visit heart.org or call 1-800-AHA-USA1.
Our offices are spread all over the United States to fight and prevent heart disease and stroke nationwide. Local offices are organized into geography-based affiliates to maximize our coverage of the entire country. Here is the breakdown of our seven affiliates:
Imagine Americans getting more physically active, eating healthier and not smoking. Imagine your doctor equipped with better ways to care for your health, and hospitals better prepared to save lives. The American Heart Association and American Stroke Association work toward those goals every day.

We do this as part of a carefully developed Strategic Plan that is focused on an ambitious health goal we’ve set for the entire nation. We call it our 2020 Impact Goal: to improve the cardiovascular health of all Americans by 20 percent while reducing deaths from cardiovascular diseases and stroke by 20 percent. Meeting this goal will require changes in personal choices, public policies and healthcare systems. Along with our volunteers, we work with individuals, schools, lawmakers, healthcare providers and others to ensure everyone has access to healthier lifestyle choices and proper health care.

Our 2020 goal exists to save lives. We also use this target to measure the success of our work. Accountability is critical to the American Heart Association, and it’s a key reason we have been one of the world’s most respected health organizations for nearly 90 years.

All of the work we do to fulfill our Strategic Plan and meet the 2020 goal can be broken down into three general areas shown below. And, of course, everything we do is guided by science.

---

**science & research**

Everything we do is guided by science. That means support for groundbreaking research into cardiovascular diseases and stroke, and creating treatment guidelines and scientific statements that have become standards of patient care. That also means all of our healthy living programs, awareness campaigns, advocacy efforts, education and training, and hospital quality improvement programs are based on the latest evidence-based findings.

---

**healthy living**

Stretching beyond disease prevention, this emphasizes a better, healthier lifestyle. Our goal is the create a culture of health. That means eating foods that taste great and happen to be healthy. It also means walking, jogging or other exercise to feel better and enjoy a more active lifestyle with family and friends. Whatever you need to get started or remain motivated, we can help.

---

**treatment & education**

If you or a loved one needs information about cardiovascular diseases or stroke, we are here for you. No matter your gender, ethnicity or age, we have something tailored to you. Our education efforts go beyond the consumer as well. Our expertise and leadership helps guide state and federal lawmakers, as well as policymakers at the United Nations.

---

**emergency & hospital care**

Cardiovascular events and stroke require immediate attention from skilled people. We work to give all Americans the best care possible whenever and wherever it’s needed. For example, CPR training can turn anyone into a lifesaver. We also work with hospitals of all sizes to evaluate and improve the quality and effectiveness of their care.
As the data builds, so does the progress toward reaching our 2020 Impact Goal. Fewer people are dying of heart disease and stroke, keeping us in line to meet half of our goal: reducing deaths by 20 percent. So far, we’ve seen a drop of 8.8 percent over the last four years for which statistics are available. Going deeper within those numbers, we find significant progress in the key areas of coronary heart disease (12.1 percent decrease) and stroke (10.1 percent decrease). While the combined category of “other cardiovascular diseases” went up slightly in latest annual figures from the Centers for Disease Control and Prevention, that group shows a 3.2 percent improvement from the starting point.

The other component of our 2020 Impact Goal is improving the cardiovascular health of all Americans by 20 percent, and the early results continue to be mixed. We’ve seen improvement in reducing smoking among adults and kids, and more adults are controlling cholesterol and improving diet. We’ve also seen minimal or no improvement in the areas of glucose control and high blood pressure among adults and kids, as well as obesity in kids and physical activity for kids.

Please bear in mind that these results merely measure a single statistical “data point” within a time period. It’s also especially important to know that because of how long it takes for the government to measure this detailed information, the most up-to-date statistics for this report are for 2010 – and 2010 was the year we launched the 2020 Impact Goal. Thus, only now are the numbers catching up to the start of our efforts to target these areas.

So we look forward to continued progress once we have quantifiable results from our Healthy Living initiatives, our Treatment and Education programs and our advancements in Emergency and Hospital Care. These are all reflections of our investments in science and research, and a reflection of our commitment to a healthier nation by 2020.
Saving and improving lives is at the core of what we do, and science is at the core of how we do it. We lead the way in cardiovascular thought through our scientific meetings, journals and professional membership. We develop treatment guidelines and scientific statements that have become the standard of care for patients. And, remaining true to our founders’ vision to grow and improve the field, we fund hundreds of research projects each year in an ongoing effort to accelerate science.

expanded research portfolio
We continued our role as the largest funder of cardiovascular and stroke research outside the federal government by funding 978 research projects, chosen from more than 6,000 applicants. Our commitment to the best scientific innovation was affirmed by a yearlong review of our already robust research portfolio. Relying on input from hundreds of volunteers and outside experts, we announced four new research awards that will strengthen our emphasis in key areas. Three programs will be offered beginning in 2013-14: The Collaborative Science Award to foster innovative new collaborations leading to unique and novel discoveries; a mentoring award to benefit early career awardees, especially those who could benefit from mentoring not available at their own institution; and Strategically Focused Research Networks. The Board of Directors chose the topic of Prevention for the first Strategically Focused Research Network. Inaugural awards for outstanding individual merit will be offered in 2015-16. We believe these changes will enable us to better focus resources on mission-critical areas where gaps in knowledge exist, while enhancing collaboration among scientists and ensuring that we continue to support the best and brightest in the field.

conferences and meetings
Our professional membership continued to increase, reaching more than 30,000 members from 110 countries and representing 75 specialties. Many of those scientists, healthcare providers and educators attended Scientific Sessions, the leading cardiovascular meeting in the United States and a significant destination for the international cardiovascular medicine community. A record number of Late-Breaking Clinical Trials were presented at Sessions, further establishing it as the premier gathering of cardiovascular thought. Our International Stroke Conference remains the most impactful and well-attended meeting for cerebrovascular science and experienced a record number of abstract submissions. In all, about 21,000 global cardiovascular professionals attended our scientific conferences.

scientific journals and publications
Our 12 journals moved science ahead faster by informing investigators everywhere, and media coverage of that science reached billions of people around the world. Our journals again earned top rankings in several measures of importance and influence from Journal Citation Reports® (Thomson Reuters), a top arbiter of peer-reviewed publications. The most recent addition to our portfolio – Journal of the American Heart Association (JAHA), an “Open Access” journal that is available online – has been accepted into the Thomson Reuters Science Citation Index Expanded, with coverage from Volume 1, 2012.

science & technology accelerator program
Year 2 of this program – which provides investment capital to help propel potentially transformational technologies from lab bench to bedside – provided continuing validation for our initial investment in CytoVas, LLC, a diagnostics company whose Vascular Health Profile blood test has demonstrated ability to assess the status of the linings of a patient’s blood vessels. This may be able to help better predict risk for cardiovascular and stroke events – even in people with normal blood pressure, cholesterol and blood sugar. Our investment is funding a trial to assess the test’s ability to determine effectiveness of preventive therapies. Boosted by the American Heart Association’s involvement, CytoVas received another $2 million from Becton-Dickinson, an industry leader in diagnostic instrument manufacturing.

The Physician of the Year is Gerald Ross Marx, M.D., an internationally recognized pediatric cardiologist and a pioneer in 3-D imaging of congenital heart disease. Dr. Marx is director of ultrasound imaging research at Boston Children’s Hospital and associate professor of pediatrics at Harvard Medical School. He is an important volunteer in science, fundraising and advocacy.
For many years, we encouraged Americans to lower their risk of heart disease and stroke. Now we’re taking the next step and asking everyone to embrace a lifestyle that improves cardiovascular health – simply to feel better and enjoy life more. Our goal is to create a culture of health. With that in mind, we designed and enhanced programs through our My Heart. My Life™ healthy-living initiative and took several other steps to help all Americans make healthier choices.

fighting childhood obesity

One in three children is obese or overweight, setting up a lifetime of hardship. We continue striving for a reversal of this epidemic by targeting environments where positive behaviors can manifest, and we do so in collaboration with prominent organizations.

The Robert Wood Johnson Foundation provided $8.5 million toward “Voices for Healthy Kids,” a new collaboration focused on changing public policies to help children and adolescents eat healthier foods and be more active. The William G. McGowan Charitable Fund donated $5.5 million to create healthier childcare and learning centers for children 5 and under. This program, called “Healthy Way to Grow,” involves Nemours, a nonprofit children’s health organization that specializes in family-centered care.

We continued to be proud our work with the William J. Clinton Foundation and the Alliance for a Healthier Generation, removing calories from school vending machines and showcasing the most successful schools. The Alliance is in 17,000 schools, with a goal of 25,000 by 2015.

More than 2 million kids in about 100,000 classrooms have participated in physical activity through the NFL PLAY 60 Challenge, an effort that will continue as the nation’s most popular sports league extended its support through the 2014-15 school year.

healthier foods, more physical activity

Teaching Gardens help elementary-school kids learn about healthy eating in a fun way: getting their hands dirty planting and growing fruits and vegetables. Research indicates children in such programs are more likely to eat fruits and vegetables because they’ve nurtured them themselves. More than 200 gardens have been funded across 30 states, reaching more than 80,000 students and countless parents and siblings. New this year: indoor gardens where it’s too cold to plant outdoors during the school year and non-school locations, such as community centers.

More companies are offering a healthier environment, and we continue recognizing them as Fit-Friendly Worksites. The list grew this year to about 8 million employees at more than 3,600 companies. We also offer Walking Paths to help people stay active wherever they are.

shaking the salt habit

This year we continued working to reduce consumption of sodium – which the average American consumes far too much of, raising risks for heart disease and stroke. We used National Eating Healthy Day to launch the “Salty Six” campaign educating people about common foods they may not realize are often loaded with sodium. We also offered consumers a 21-day Sodium Swap Challenge and released “Eat Less Salt,” a book with 60 low-sodium recipes.

stopping tobacco

The first results are in from our tobacco-fighting partnership with the Robert Wood Johnson Foundation, the American Cancer Society and the Campaign for Tobacco-Free Kids. The biggest success is a new $1.60 per pack increase in cigarette taxes in Minnesota, which is expected to keep more than 47,700 children from becoming addicted adults, reduce the youth smoking rate by 16 percent and save more than 25,700 Minnesotans from premature death from smoking. The tobacco tax also was increased by $1 per pack in Massachusetts, and funding for tobacco prevention programs was increased in Oregon and Iowa.

“Seeing him on the field left me both cheering and tearing up. I thought about all the families we’ve befriended along this journey, and how Hunter represented those kids and everyone else with congenital heart defects.”

Wendy Paulin of Indian Head, Md., mother of 10-year-old Hunter Paulin, who ran to midfield of the Superdome with the official football for the Super Bowl in February 2013 on behalf of NFL PLAY 60, our partnership with the NFL that encourages kids to be active for an hour each day. Hunter was 5 days old when he underwent the first of many surgeries to battle his six heart defects.
serving all americans

As part of our commitment to all Americans, we seek to eliminate healthcare disparities for people at higher risk for heart disease and stroke. We had many noteworthy accomplishments this year in our programs for women, African-Americans and Hispanics/Latinos.

Go Red For Women celebrated its 10th annual National Wear Red Day, a milestone in the movement’s effort to raise awareness that heart disease is the No. 1 killer of women. More than 1.6 million women have joined and, most importantly, more than 627,000 lives have been saved – about the equivalent of the population of Nashville, Tenn.

A new study shows awareness among women has nearly doubled over 15 years. While the study also showed knowledge is lagging among minorities and younger women, we know we're making strides with those groups as applications more than doubled for our Go Red Multicultural Scholarships.

Our Power To End Stroke movement helps empower African-Americans, who are twice as likely to have a first-ever stroke. Initiatives include the Power Physical Activity Challenge, which saw participants log well over 1 million miles walking and running in the first few months. Check. Change. Control. encourages monitoring, treating and counseling for high blood pressure. It is on pace to reach an enrollment of 30,000 by the end of 2014.

To reach more Hispanics – the nation’s largest ethnic or racial minority – we published our first Spanish-English recipe booklet and expanded our Spanish-language presence online though Vida Saludable (Healthy Living) and Noticias Cientificas (Science News).

battling stroke

With nearly 800,000 strokes occurring every year, we are committed to helping people identify a stroke and call emergency help when one occurs. With the support of our inaugural sponsor, Covidien, the Together to End Stroke initiative teaches Americans that stroke is largely preventable, treatable and beatable, and our new Spot a Stroke F.A.S.T. campaign offers a memorable way to recognize the signs and symptoms of a stroke.

executive innovation

Chief Executive Officers are working together to improve the health of their employees and communities through our new CEO Roundtable. Together, our Roundtable members are creating and testing new approaches that will result in a roadmap for achieving better health among employees and reducing healthcare costs. The Roundtable is co-chaired by Henry Kravis of KKR and Terry Lundgren of Macy’s and includes CEOs representing 24 Fortune 500 companies.

global focus

The United Nations has set a goal to reduce premature mortality from non-communicable diseases by 25 percent by 2025, and also to reach eight other health-improvement targets. We continue our work with the Non-Communicable Disease Alliance and other global partners toward the prevention and treatment of heart disease and stroke.

Our programs are taking root around the globe, too. In China, 91 hospitals were designated Professional Resource Centers. Go Red For Women has been implemented in more than 40 countries. And the Brazilian Society of Cardiology will be promoting Go Red For Women and Hands-Only CPR.

“I’m reaping the benefits of early diagnosis and intervention. Remember, ‘Time lost is brain lost!’”

Lorena Rivera of Jacksonville, Fla., thought she was having migraines when doctors discovered she’d endured two warning strokes. She now helps spread awareness and advocates for stroke-related issues.
EMERGENCY & HOSPITAL CARE
key accomplishments in 2012-13

We hope our Healthy Living and our Treatment and Education programs keep you and your loved ones from ever being in an ambulance or hospital. But if tragedy strikes, take solace in knowing all we are doing to help ensure the best and fastest care possible.

cpr and first aid

More than 14.5 million people learned CPR from us in the past fiscal year, a figure that should continue to increase thanks to continued expansion of our International Training Centers. We added another 90 this year, giving us more than 500 in 60 countries. All told, our training has been conducted in more than 140 countries, with materials in 11 languages. CPR training generated $81.6 million in revenue globally.

better care – it’s the law

CPR training is coming soon to high school classrooms in many states, thanks to our advocacy efforts. At the end of the fiscal year, 12 states required CPR training prior to graduation. Along with other organizations and countless patient and parent advocates, we continued to push for heart-defect screening in newborns using pulse oximetry devices, leading to law changes in 15 states. Also, nine states strengthened systems of care for stroke and heart attacks.

We scored a major federal victory requiring the Food and Drug Administration to develop a report and action plan ensuring availability of more and better information about how new drugs and medical devices affect women, minorities and ethnic groups.

improving treatment systems

Distributing scientific advances to healthcare providers – and ultimately their patients – is the basis of our Get With The Guidelines quality-improvement programs. Each program targets a specific area of care, including the latest addition for atrial fibrillation.

More than 2,000 U.S. hospitals participate in at least one of these programs, combining for almost 5 million patient records since Get With The Guidelines’ inception. There are more than 2.5 million entries in the stroke registry alone. Get With The Guidelines reaches more than 40 percent of all hospitalizations for certain diseases, such as stroke.

As an example of the impact these programs make, Get With The Guidelines-Resuscitation provided research showing that giving CPR for longer than 20 minutes is not futile – as many previously believed.

Mission: Lifeline now covers three of every five Americans. There are now more than 600 systems registered in this program, which provides urgent care for those having dangerous heart attack known as a “STEMI.” Mission: Lifeline has received significant support from the Rural Healthcare Program of The Leona M. and Harry B. Helmsley Charitable Trust. This year, the Trust granted $4.6 million to expand Mission: Lifeline into rural Minnesota. We are deeply thankful for the Trust’s commitment to ensuring that rural Americans receive the same level of healthcare as their urban counterparts.

american heart association/american stroke association accredited & certified hospitals

The Heart-Check mark, long recognized in grocery stores, is now helping Americans find quality health care. Through two years, nearly 1,200 hospitals have been certified or accredited by the American Heart Association/American Stroke Association and our collaborators. This includes co-branded certification programs with The Joint Commission for Primary Stroke Centers, Comprehensive Stroke Centers and Advanced Certification in Heart Failure; and Mission: Lifeline STEMI Receiving and STEMI Referring Hospital Accreditation with the Society of Cardiovascular Patient Care.

“The HEART for Women Act helps all Americans – regardless of gender, race and ethnicity – be protected by the FDA and in equal measure be guided to effective drugs and devices that work for them.”

Dr. Susan K. Bennett, a cardiologist and past president of the Greater Washington (D.C.) Region of the American Heart Association, who suggested the provision.
financial stewardship

Saving lives is our mission, and we fulfill it by investing in science, programs and people. We also take great care to invest wisely in everything we do, because we consider ourselves caretakers of the dollars others have earned and generously donated to our organization.

To uphold the public’s trust, we gladly hold ourselves accountable, both to our donors and to the Americans whose lives we strive to improve.

The pie chart on the next page shows the majority of our expenditures – 79.3 cents of every dollar – went to public health education, research, professional education and training, and community services. In total, we directed $486.9 million into our mission.

Efficiency is crucial to fulfilling our obligations. A perfect example comes from our achievement of top-line growth while maintaining prudent levels of spending. The result of these efficiencies, along with favorable returns from investments, was a 10.7 percent increase to net assets.

“Similar to the previous year, we continued to focus on core revenue streams and have seen consistent growth in these areas, particularly special events and restricted contributions. In addition, implementation of new business models targeted at delivery of CPR training has allowed us to maintain a revenue stream that has historically experienced more peaks and valleys,” said Sunder D. Joshi, FCA, Chief Administrative Officer and Chief Financial Officer.

“While we are pleased with our growth in net assets, growth from operations is particularly important. Excluding the impact of investment gains, unrestricted net assets increased 8.1 percent and total net assets increased 4.3 percent. Replenishment of net assets previously eroded during the financial downturn affords us greater flexibility to direct more dollars toward our mission.”

More notable details from our 2012-13 financial statement:

research

Our devotion to scientific research was evidenced by $121.6 million to fund research awards. This marks an increase of $4.8 million, and continues our proud status as being second only to the federal government in the funding of cardiovascular research in the United States.

revenue growth

Special events, our largest revenue stream, grew by $6.2 million, an increase of 2.4 percent over the previous year. This marks a third consecutive year of sustained growth from this crucial revenue source. Restricted contributions continued to experience growth as well and grew 13.1 percent over the previous year. Reductions from in-kind contributions, primarily related to advertising for public service announcements, and bequests offset the growth noted above, resulting in a 1.5 percent reduction in public support revenue.

other revenue

Other revenue was positively impacted by gains from the association’s long-term investment portfolio and increased valuations of split-interest agreements and perpetual trusts. These were the primary contributors to a $54.6 million, or 44.9 percent increase to other revenue.
The figures on this page depict the financial activities of the National Center, affiliates and all components of the American Heart Association and its division, the American Stroke Association, for the fiscal year July 1, 2012, through June 30, 2013.

**ASSETS**  
(in thousands)  
- Cash, Cash Equivalents, Investments $646,129  
- Beneficial Interest in Perpetual Trusts 131,674

**Total Liabilities and Net Assets** $1,101,730

A complete copy of financial statements audited by KPMG, LLP is available upon request from the American Heart Association, Inc., 7272 Greenville Ave., Dallas, TX 75231 or on our website at heart.org.
With roughly 83.6 million Americans fighting cardiovascular diseases and stroke, we realize the impact of our mission. Many people remain at risk, especially among our youth, yet government funding for research is going down. This is why we cherish our donors. Whether small gifts from children or large checks from corporations, we know there’s a reason for each – a thank you for a life saved or changed, or in hopes of finding more ways to save and change lives.

Rylan Karrer is a 10-year-old boy with a freckled face, big smile and failing heart. A one-in-a-million condition prevents the chambers of his heart from filling with blood. The only solution is a transplant, and those odds are steep, too, because he needs a donor with his blood type who weighs within 10 pounds of him.

His health is so fragile that he can’t go to school. He’d be exposed to too many germs that his body couldn’t fight off.

Yet in February 2013, Rylan made a special outing. He shared his story at the Heart Ball in Montgomery County in Conroe, Texas. Six spontaneous gifts of $10,000 followed, on the way to an event-record total of nearly $900,000.

The Karrers were among nearly 90,000 people nationwide who attended Heart Balls this year, generating $59.7 million. Another 85,000 guests enjoyed Go Red Luncheons that raised $36 million. Within these events, our Individual Giving campaigns – such as Circle of Red, Men Go Red, and Open Your Heart – raised more than $17 million.

Our most popular event is the Heart Walk, which promotes physical activity and community service for Americans of all ages. More than 500,000 people all across the country participated, producing $105.6 million. Heart Walks in 31 markets raised more than $1 million each, and seven topped $2 million. The event in Dallas raised a whopping $4.5 million.

Additionally, more than 10 million youngsters were involved in our in-school fundraisers, Jump Rope For Heart (primarily in elementary schools) and Hoops For Heart (primarily middle schools). In addition to learning about the importance of heart health, physical activity and nutrition, nearly 2 million of those students raised more than $54.1 million.

Like many who support the American Heart Association, Rylan’s family wants to help unlock the answers to diagnose, treat and prevent all forms of heart disease. As for dealing with their situation, they make the best of what Rylan’s mom Kristina calls their “new normal.”

“For now we anxiously await the day he gets his new heart and gets to be a typical kid again,” she wrote on the “I Heart Rylan” Facebook fan page on the two-year anniversary of his diagnosis. “Until that day we will keep smiling and laugh ourselves to the next step on our journey.”

Paul Dudley White Legacy Society

This society is named for a founding member and early president of our organization. Paul Dudley White's efforts to improve the quality of patient care earned him the legacy of "Father of American Cardiology." The society recognizes donors who have made an estate gift to the American Heart Association or American Stroke Association. Some donors chose to remain anonymous. While not named here, we give our heartfelt thanks to those supporters as well.
