What types of diabetes are there?

There are two main forms of diabetes: **type 1 diabetes** and **type 2 diabetes**.

Type 2 is the most common. About 90 percent to 95 percent of American adults diagnosed with diabetes have type 2 diabetes. It most often develops in middle-aged and older adults. It’s often linked with being overweight, obese and physically inactive.

Insulin resistance is a condition where the body produces insulin but does not use it efficiently and blood glucose goes up. If uncontrolled, insulin resistance can lead to pre-diabetes or type 2 diabetes.

Type 1 diabetes usually starts early in life, but it can also develop in adults. It results from the body’s failure to produce insulin. People with it must take insulin each day to control their levels of blood glucose.

Am I at risk?

The number of people with diabetes is increasing. More people are overweight or obese, don’t get enough physical activity and don’t eat a healthy diet. These factors can increase risk of type 2 diabetes. While type 2 diabetes has historically been more common in adults, many younger people are developing diabetes at an alarming rate.

People in several ethnic groups seem to be more likely to develop type 2 diabetes. These groups include:

- Hispanics/Latinos
- African Americans
- Native Americans
- Asians (especially South Asians)

How can I control my risk for heart disease and stroke?

Diabetes is a major risk factor for stroke and heart disease. Other major risk factors are smoking, high cholesterol, high blood pressure, physical inactivity or obesity.

If you have diabetes, it’s very important to have (continued)
What Is Diabetes and How Can I Manage It?

regular check-ups. Work closely with your healthcare provider to manage your diabetes and reduce any other risk factors:

• Manage your weight, blood pressure and cholesterol with a heart-healthy eating plan that is low in saturated fat, trans fat, salt (sodium) and added sugars.
• Be physically active. Aim for at least 150 minutes of moderate-intensity physical activity, such as brisk walking, or 75 minutes of vigorous-intensity aerobic activity each week.
• If you drink alcohol, don’t have more than one drink per day for women or two per day for men.
• Lower your blood pressure, if it’s too high. Aim for a normal blood pressure which is less than 120 mm Hg for the systolic (upper) number and less than 80 mm Hg for the diastolic (lower) number.
• Don’t smoke, and avoid second-hand smoke.
• If you take medications, take them exactly as directed. If you have questions about the dosage or side effects, ask your healthcare provider or pharmacist.

Following a heart-healthy eating plan is a great way to manage your diabetes and reduce other risk factors.

How Can I Learn More?

1 Call 1-800-AHA-USA1 (1-800-242-8721), or visit heart.org to learn more about heart disease and stroke.
2 Sign up to get Heart Insight, a free magazine for heart patients and their families, at heartinsight.org.
3 Connect with others sharing similar journeys with heart disease and stroke by joining our Support Network at heart.org/supportnetwork.

Do you have questions for the doctor or nurse? Take a few minutes to write your questions for the next time you see your healthcare provider.
