

HEART AND STROKE RESEARCH in the Midwest Affiliate 2016-2017

Medical research leads to better ways to prevent, diagnose and treat heart disease and stroke in your community. Since 1949, the American Heart Association has invested more than \$4.1 billion in studies that have led to medical advances such as artificial heart valves, CPR, pacemakers, cholesterol drugs, microsurgery and drug-coated stents.

More Research Support is Needed

In spite of this investment, in 2016-2017 we lacked another \$128,695,584 million to fund 797 proposals in our affiliate - which means that many highly meritorious scientific projects were shelved, deferring the knowledge that would result from their completion. For easy-to-understand summaries of new studies published in American Heart Association medical journals, visit heart.org/simplescience.
