

Heart and Stroke Research in the Midwest Affiliate 2012-2013

Medical research leads to better ways to prevent, diagnose and treat heart disease and stroke in your community. Since 1949, the American Heart Association has invested over \$3.3 billion in studies that have led to medical advances such as artificial heart valves, CPR, pacemakers, cholesterol drugs, microsurgery and drug-coated stents.

This list includes 197 new multi-year studies funded in 2012 that are being conducted at 34 research institutions in our Midwest Affiliate at a cost of nearly \$21.4 million.

More Research Support Is Needed

In spite of this investment, in 2012 we lacked another \$25.57 million to fund 187 highly meritorious proposals -- a critical gap which means that many scientific projects were shelved and the knowledge that would have resulted from them was lost or deferred.
