## **PROGRAM OVERVIEW**

This is a multidisciplinary symposium that will provide cutting-edge information and best practices for diagnosis and treatment of shock/critical illness with topics including cardiac arrest, septic shock, pulmonary thromboembolism, toxicological emergencies, hemorrhagic shock, and more. Sessions are innovative and interactive with nationally recognized speakers. In addition, the Symposium will include an original research poster session and those interested may submit an abstract for consideration.

## **LEARNING OBJECTIVES**

At the completion of this activity, the learner will be better able to:

- Identify challenges and strategies in the diagnosis and management of patients with shock/critical illness.
- Evaluate controversies and resuscitation strategies for patients with cardiac arrest.
- Apply latest approaches in the management of shock/resuscitation.
