

Screening Tool to Assess Need for Rehabilitation

REHABILITATION:

** Rehabilitation evaluation is essential for optimal patient outcome. PT, OT and ST consults should be obtained, depending upon the resources available within the facility. Consider the use of telehealth for these services.

Rehabilitation Scale for determining need of Acute Inpatient Rehabilitation Facility			
Consider an Ac	ute Inpatient Rehab	ilitation Facility, even if it means trav	rel for the patient and family.1
Does your patie	nt need assistance w	ith any of the following?	
Transfers	ility Yes No Yes No Yes No		□ Yes □ No □ Yes □ No □ Yes □ No
Feeding Grooming Dressing	Yes No Yes No Yes No Yes No Yes No Yes No		
	7. 7	more items in One (1) or more categor patient rehabilitation facilities. (see CAI	<i>31</i>
Medical Stal Adequate th	erapy tolerance- at lea	g criteria: accepting rehabilitation physician. ast 3 hours daily, 5 days per week or mor mine therapy tolerance.	e. Therapy notes from referring
		s- PT and OT and possibly ST and/or Pro tation nursing services.	osthetic and Orthotic Services
 Discharge anticipated to Non-Institutional setting- family and/or caregiver may need to be identified prior to admission, especially if the patient is likely to need assistance after discharge. 			
Admission is usually subject to financial review prior to acceptance for in-patient rehabilitation.
