Aortic Stenosis: Considerations for Replacing Your Aortic Valve

Are you able and willing to take a blood thinner?

YES

- Age <50: SAVR
- Age 50–65: SAVR
- Age 65–80: SAVR or TAVI
- Age >80: TAVI

NO

Tissue Valve

- Age <65: SAVR
- Age 65–80: SAVR or TAVI
- Age >80: TAVI

Age is not the only factor in making a decision on treatment. It is critical to talk to your care team to weigh the risks and benefits of each approach and take into account your values and preferences.

SAVR - Surgical Aortic Valve Replacement
TAVI - Transcatheter Aortic Valve Implantation
