Our Mission and Vision

Mission: Eliminate Heart Attacks and Strokes in San Diego.

Vision: Make San Diego the first heart attack and stroke free zone in the country.

Comprehensive Approach to Cardiovascular Health

Policy, Systems and Environmental Change at Work

At the Crossroads of Community, Medicine and Justice

12

Southeastern San Diego Cardiac Disparities Project

Goal

Improve CVD health of African American adults in Southeastern San Diego through increased healthy behaviors and the management of risk factors to end heart attacks and strokes in the historically under-resourced southeastern region of the City of San Diego

Objectives

- Increase awareness of cardiovascular risk factors
- Increase referrals from faith-based organizations to clinicians
- Increase medication initiation and adherence

13

SESD Faith Community Response

"We believe that each person is born with dignity and divinity with purpose. Chronic heart disease has robbed so many in our community of the greatest joy of fulfilling their purpose. We will no longer sit idly by. We will 'Be There' for every member of our community to lift them to their greatness in health."

14

Results

- 22 churches and mosque formed faith-based learning community for resource-sharing and capacity-building
- Each completed own "Heart Health Plan"— PSEs to raise awareness of risk factors, manage chronic diseases and support linkages to physicians

15

PSEs by the numbers

- 66 PSE interventions implemented by 22 faith-based organizations
 - 22 BP Monitoring Interventions
 - 22 Healthy Food Policies
 - 22 Physical Activity Interventions
- Jan-Dec. 2017 no. of self-reported clinical referrals: 826

Key partners of the Million Hearts® initiative are public health departments— they play a critical role in addressing cardiovascular health needs through collaboration with community partners.

The Community Clinical-Linkages Toolkit adds to the collection of Million Hearts® tools and is intended to help public health practitioners further the Million Hearts® goal of preventing heart attacks and strokes through the development and strengthening of effective community-clinical linkages.

CCL Toolkit Structure

- The toolkit is organized using the framework outlined in the Practitioner's Guide. Use the drop down menu for each strategy!
- **LEARN** about community and clinical sectors
- **IDENTIFY** and engage key stakeholders from community and clinical sectors
- **NEGOTIATE** and agree on goals and objectives of the linkage
- **KNOW** which operational structure to implement
- **AIM** to coordinate and manage the linkage
- **Grow** the linkage with sustainability in mind
- **EVALUATE** the linkage

CCL Toolkit Resources

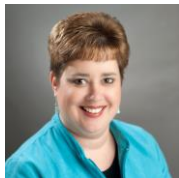

- ▶ Resources were obtained from state- and local-level organizations to help implement each strategy. The resources have links and brief descriptions of their contents.
- ▶ Resources include:
 - white papers
 - case studies
 - examples of referral forms and clinic check-off lists
 - strategies that demonstrate how to incorporate community health workers, community pharmacy programs, primary care and community outreach
 - how to use of electronic health records (EHR) and data to identify areas of need and activate funding sources

The Evaluation of a Regional Faith Community Network's Million Hearts Program

Jennifer Cooper, DNP, RN, PHNA-BC, and Wendy Zimmerman, BS, RN, BC

ABSTRACT: *Objective:* The goal of the Million Hearts initiative is to prevent and reduce heart disease and stroke by 20% by 2020. The goal of this study was to evaluate the impact of the Million Hearts program on blood pressure management and stroke prevention in a rural community. *Methods:* This study was a descriptive, cross-sectional study of a rural community. The study included a survey of 100 individuals who were members of the Million Hearts program. The survey included questions about blood pressure management, stroke prevention, and health behaviors. *Results:* The study found that 60% of participants had blood pressure that was not well managed. The study also found that 40% of participants had a history of stroke. The study found that 30% of participants had a history of heart disease. The study found that 20% of participants had a history of diabetes. The study found that 10% of participants had a history of kidney disease. *Conclusion:* The study found that the Million Hearts program had a positive impact on blood pressure management and stroke prevention in a rural community. The study found that 60% of participants had blood pressure that was not well managed. The study also found that 40% of participants had a history of stroke. The study found that 30% of participants had a history of heart disease. The study found that 20% of participants had a history of diabetes. The study found that 10% of participants had a history of kidney disease.
