Advancing Million Hearts in Rhode Island

August 9, 2016

Providence, Rhode Island

Million Hearts®

**Goal: Prevent 1 million heart attacks
and strokes by 2017**

- National initiative co-led by CDC and CMS in partnership with federal, state, and private sectors
- To address the causes of 1.5M events and 800K deaths a year, \$316.6 B in annual health care costs and lost productivity and major disparities in outcomes

Key Components of Million Hearts®

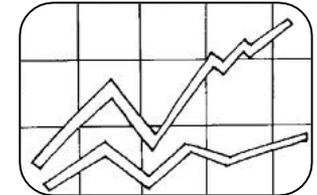

Keeping Us Healthy
Changing the environment

Health
Disparities

Excelling in the ABCS
Optimizing care

Focus on
the **ABCS**

Health tools
and technology

Innovations in
care delivery

Getting to a Million by 2017: *Public Health Targets*

Intervention	Pre-Initiative Estimate 2009-10	2017 Target
Smoking prevalence*	26%	24%
Sodium reduction	3580 mg/day	2900 mg/day
Trans fat reduction	0.6% of calories	0% of calories

* Includes all forms of combustible tobacco – cigarettes, pipes, and cigars

Getting to a Million by 2017: Targets for the ABCS

Intervention	Pre-Initiative Estimate 2009-2010	2017 Population-wide Goal	2017 Clinical Target
A spirin when appropriate	54%	65%	70%
B lood pressure control	52%	65%	70%
C holesterol management	33%	65%	70%
S moking cessation	22%	65%	70%

Million Hearts® Accomplishments*

Changing the Environment

Reduce Smoking

Almost 4 million fewer cigarette smokers[†]

Reduce Sodium Intake

More than 2 billion meals/year will have reduced sodium[‡]

Draft Voluntary Guidance to Industry Released June 1, 2016

Eliminate Trans Fat Intake

Accomplished: FDA issued the final determination on artificial trans fat[§]

* Note this is a select set of notable Million Hearts® accomplishments.

[†] National Health Interview Survey, comparing 2011 data to 2014 data

[‡] Aramark pledge <http://blog.heart.org/aha-aramark-join-on-meals-initiative/>

Million Hearts® Accomplishments

Optimizing Care in the Clinical Setting

Focus on the ABCS

Millions of Americans are covered by health care systems that are recognizing or rewarding performance in the ABCS**

Health Tools and Technology

Over half a million patients have been identified as potentially having hypertension using health IT tools**

Innovations in Care Delivery

Millions of dollars in public and private funds have been leveraged to focus on improving the ABCS**

** CMS Physician Compare and HRSA Uniform Data Set

†† Unpublished data from AMGA/MUPD and NACHC HIPS project

‡‡ CMS Million Hearts Risk Reduction Model, AHRQ EvidenceNOW, AHA Southwest Affiliate HTN project

Million Hearts Progress to Date

- Engagement and activation
- Clinical Quality Measure alignment
- Understand what works, where, and why
- Resources that help
- Extraordinary support for prevention

Million Hearts® Hypertension Control Champions

59 Champions

Representing
Solo to 70,000
Clinicians

Serving over 13
million people

>70% Control
Rate

- Practices and systems achieved control rates \geq 70%
- Champions used evidence-based strategies
 - Hypertension treatment protocols
 - Self-measured blood pressure monitoring
 - Frequent check-in's
 - Registries and proactive outreach
 - Team-based care.
- ***Next Million Hearts® Hypertension Control Challenge planned for launch in Feb 2017***

Standardizing Treatment through Protocols

- Hypertension Treatment Protocol
 - Use is on the Rise
 - All Indian Health Service clinical settings
 - Many Federally Qualified Health Centers
 - Practices supported by CMS' Quality Improvement Organizations
- Tobacco Treatment Protocol
 - Released a Tobacco Treatment Protocol in May
 - Customizable templates
 - Implementation guidance
 - coming in July

Protocol for Identifying and Treating Patients Who Use Tobacco

Name of Practice

No level of smoking or tobacco use is safe.¹ Tobacco addiction is a chronic condition, often requiring multiple quit attempts for a tobacco user to become tobacco free.² There are effective, evidence-based, brief clinical interventions available to help patients who smoke. The intervention protocol³ below can be integrated into the tobacco use identification and intervention clinical workflow for every patient aged 13 years and older. This protocol can also serve as a model to build clinical decision support into the electronic health record (EHR) to achieve tobacco use intervention goals. In terms of the core components of a clinical tobacco cessation intervention, all patients can benefit from behavioral counseling. All patients 13 and older, with the exception of pregnant women, adolescents, light smokers, and smokeless tobacco users (due to insufficient evidence), can benefit from medication. The combination of counseling and medication is most effective, and both should form the foundation of a brief cessation intervention.⁴ It is important to monitor patients during their quit attempt for behavioral and medication adherence, efficacy, and side-effects, to provide support, and to offer continued assistance in the case of slips or relapses to tobacco use.

[Reset Form](#)

Tobacco Cessation Brief Clinical Intervention Protocol⁵

YES

ASK
Do you currently use tobacco?⁶

*Currently, there is insufficient evidence on e-cigarettes and other electronic nicotine delivery systems (ENDS) to recommend a clinical intervention.⁷

ICD-10 Tobacco/Nicotine Dependence Codes (See Appendix A) SNOMED Smoking/Tobacco Use Classifications (See Appendix B)

NO

If patient has recently quit (last 6-12 months), assess challenges, confidence, need for support

ADVISE to quit
ASSESS willingness to quit

"The most important thing you can do to improve your health is to quit smoking, and I can help. Are you willing to quit within the next 30 days?"
OR your own scripting.

NO

Provide brief motivational message such as:
"I feel so strongly about tobacco use and its impact on your health that I will ask you about it when I see you next."
OR your own scripting.

ASSIST with a quit plan
(see next page to recommend interactive format)

• Provide and document brief tobacco cessation counseling (1-3 minutes; 3-10 minutes)
Set a quit date within 30 days.
Review past quit attempts, including counseling and medication used.
Discuss potential triggers and coping strategies.

• Discuss, prescribe, and document tobacco cessation medications.⁸ Exceptions (insufficient evidence): pregnant (unless medical clearance and patient consent); adolescent, light smoker (eS cigarettes/day; smokeless/chew tobacco).
FDA approved — Nicotine patch, gum, lozenge, inhaler, and nasal spray; bupropion, varenicline, Patch + bupropion. Use clinical experience/judgment to consider nicotine patch (steady state) + nicotine gum or lozenge (lozenge relief); these combinations are not FDA-approved.

• Make a referral to additional in-depth tobacco cessation counseling:
(800-QUIT-NOW); in-clinic/hospital counseling; community/local counseling.

ARRANGE follow-up

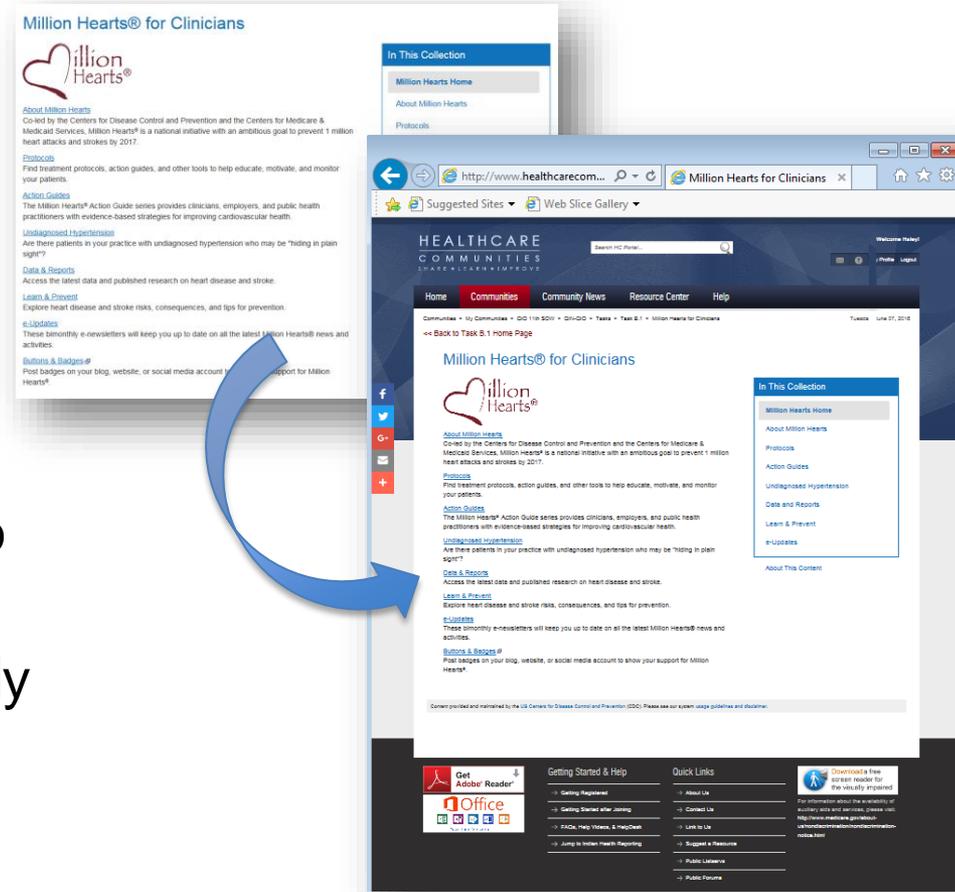

Schedule a telephone or in-clinic follow-up appointment.
"Before you leave today, we are going to schedule a follow-up appointment (phone or in-clinic) around your quit date. We will check in to see how your quit attempt is going. If you have any questions, or if there are ways we can support your quit attempt, please contact us at any point. We are here to help and support you." OR your own scripting.

What Must Happen To Prevent a Million?

Reduce Smoking

6.3M fewer smokers

- Year-round media campaigns; pricing interventions
 - Targeted outreach to drive uptake of covered benefits
 - Systematic delivery of cessation services through use of cessation protocols, referrals to quit lines, and training of clinical staff
 - Widespread adoption of smoke-free space policies
 - Awareness of risks of second-hand smoke and the health benefits of smoke-free environments
-

Control Hypertension

10M more patients

- Detection of those with undiagnosed hypertension
 - Systematic use of treatment protocols & other select QI tools
 - Practice of self-measured BP monitoring with clinical support
 - Recognition of high performers; dissemination of best practices
 - Connection of clinical & community resources to benefit people with HTN
 - Enhanced medication adherence
 - Intense focus on those with high burden and at high risk
-

Decrease Sodium Intake

20% reduction

- Adoption of Healthy Food Service Guidelines
- Voluntary sodium reduction and expansion of choices by food industry
- Recognition of high performers and dissemination of best practices
- Clear communication of the evidence supporting the health benefits of population-level sodium reduction

Events will also be prevented by improving aspirin use, cholesterol management, and utilization of cardiac rehab, and by eliminating artificial trans-fat consumption

Focus of 2016

- Smoking cessation
 - Facilitate implementation of tobacco cessation protocols
 - Promote smoke-free spaces
- Hypertension control
 - Facilitate use of self-measured BP monitoring, treatment protocols, and processes to find the undiagnosed
 - Share best practices by promoting action guides that identify and control hypertension
- Sodium reduction
 - Advance adoption of procurement guidelines
 - Disseminate healthy eating resources

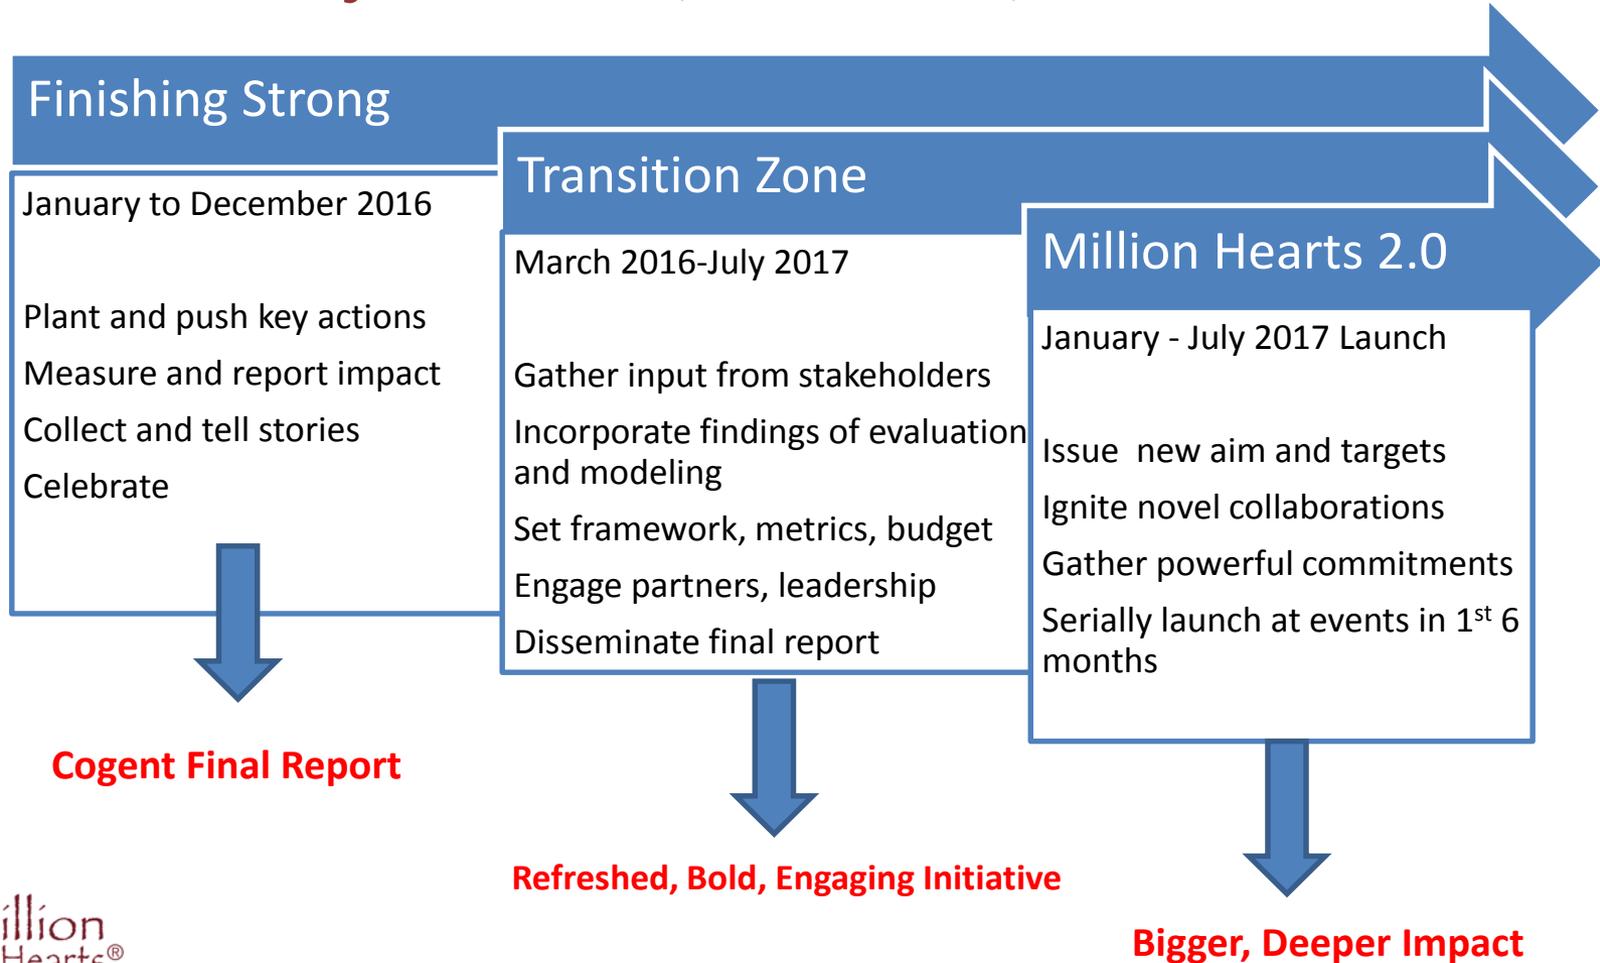

Focus of 2016

- Cholesterol management
 - Implement statin measure across clinical settings
 - Support partner actions currently underway
- Cardiac rehab
 - Facilitate collective actions to increase referral and participation
- Embed ABCS measures in value-based models
- Capture and tell the story of your success
- Recognize high performers & share best practices
 - Learn about the successes of the Hypertension Control Champions and share their lessons learned.

Million Hearts® Targets

Changing the Environment

Reduce smoking

By 2017...

The number of American smokers has declined from 26% to 24%

Reduce sodium intake

Americans consume less than 2,900 milligrams of sodium each day

Eliminate trans fat intake

Americans do not consume any artificial trans fat

Optimizing Care in the Clinical Setting

Focus on the ABCS

Use health tools and technology

Innovate in care delivery

Aspirin use when appropriate

Of the people who have had a heart attack or stroke, 70% are taking aspirin

Blood pressure control

Of the people who have hypertension, 70% have adequately controlled blood pressure

Cholesterol management

Of the people who have high levels of bad cholesterol, 70% are managing it effectively

Smoking cessation treatment

Of current smokers, 70% get counseling and/or medications to help them quit

Million Hearts® promotes clinical and population-wide targets for the ABCS. The 70% values shown here are clinical targets for people engaged in the health care system. For the U.S. population as a whole, the target is 65% for the ABCS.

1 in 3 RI Adults has High Blood Pressure

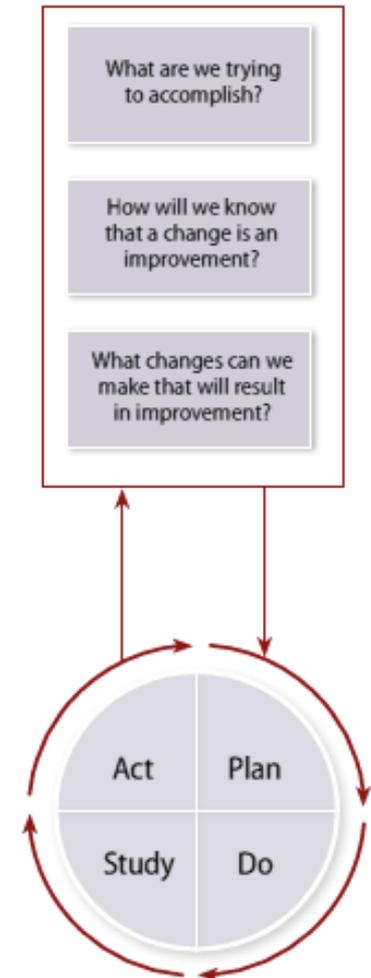

Estimated # of RI adults with hypertension: 281,300

● % adults not reporting hypertension
● % adults ever diagnosed with hypertension

In the U.S.	
Prevalence of hypertension	29.0%
% uncontrolled	53.5%
Of the uncontrolled, % unaware of having hypertension	40.0%

- 14 Practices
 - Federally Qualified Health Centers
 - Hospital Based Clinic
 - Free Clinic
- Work includes
 - Review data
 - Plan-Do-Study Act cycles
 - Network/ share
 - Submit progress reports

- Hypertension Control is a Priority
- Accurate Blood Pressure Measurement
- Evidence-based guidelines and protocols
- Facilitate Patient Self-Management
 - Goal Setting, Self-Measured Blood Pressure
- Team Based Care
- Technology
 - EMR assessment/ workflow analysis

Accurate Measurement

Accurate Measurement

	Possible effect on systolic blood pressure
Cuff too small*	+10-40 mm HG *Most Frequent Error is wrong cuff size, especially too small
Cuff too large *	-5-25 mm HG
Cuff placed over clothing	+/- 10-40 mm HG
Arm above heart level	+2 mm/ hg per inch above heart level
Arm below heart level	+ 2 mm/ hg per inch above heart level
Feet not flat on floor	+ 5 – 15 mm/hg
Back not supported	+6 mg/HG (diastolic)
Legs crossed	+ 5-8 mm/HG
Patient doesn't rest 5 minutes before	+ 10-20 mm/Hg
Patient talking	+10- 15 mm/Hg
Full bladder	+10- 15 mm/Hg
Tobacco or Caffeine Use	+6-11 mm/Hg

Self-Measured Blood Pressure

- 5 RICCC practices focus on SMBP:
 - Provide BP monitor
 - Developed written agreements
 - Teach patient how to SMBP
 - Utilize AMA checklists
 - Provide Instruction on how to follow up
 - Frequency to take measurements
 - Record & utilize home measurements

Undiagnosed Hypertension

Identify and develop a system to follow up with:

- Patients: ≥ 2 blood pressure readings ≥ 140 mmHG and/ or ≥ 90 mmHG
 - 2 separate visits, including the most recent
- No diagnosis of hypertension

Definition	Percent of patients who do not have a diagnosis of hypertension with two or more blood pressure readings ≥ 140 mmHg SBP and/or ≥ 90 mmHg DBP.
Numerator	Patients in the denominator who have systolic blood pressure ≥ 140 mmHg and/or diastolic blood pressure ≥ 90 mmHg at two separate medical visits, including the most recent visit, during the past 12 months.
Denominator	Active patients* age 18-85 years old who do not have a diagnosis of hypertension and were seen during the last 12 months.
Exclusions	Patients less than 18 years of age <ul style="list-style-type: none">• Patients diagnosed with Hypertension (ICD-9: 401.xx; ICD-10 codes: I10)• Pregnancy (ICD-9 codes – 630.xx-679.xx, V22.xx, V23.xx, V28.xx; ICD-10 codes: O00.1 – O9A.519, Z33-Z36)• ESRD: ICD-9 code: 585.6x; ICD-10 code: N18.6

Well-Integrated Screening and Evaluation for WOMen Across the Nation

- CDC Funded Program
- Additional services for WCSP
 - Screenings, medical evaluation, health coaching, lifestyle programs

TEAMWorks

- Group visits for hypertension, diabetes, or CVD
- TEAMWorks Health Care Provider office
 - Provider (MD, PA, NP)
 - group presentation, and one-on-one with patient, if applicable
 - TEAMWorks pharmacist
 - individual assessment
 - TeamWorks dietitian
 - meets with each patient

Impact of Different Factors on Risk of Premature Death

Source: Schroeder, SA (2007). We Can Do Better- Improving the Health of the American People. NEJM. 357:1221-8

Located at: <http://kff.org/disparities-policy/issue-brief/beyond-health-care-the-role-of-social-determinants-in-promoting-health-and-health-equity/>

Rhode Island Smoke Free Public Places & Workplaces Law

“Public Health and Workplace Safety Act” passed in June 2004. Exemptions: Casinos, Smoking Bars, outdoor spaces such as beaches and parks.

- ⊘ There is no risk-free level of exposure to secondhand smoke exposure. Secondhand Smoke is a US EPA Class A Carcinogen.
- ⊘ Exposure to secondhand smoke leads to stroke, nasal irritation, lung cancer, coronary heart disease and reproductive issues in adults. SHS exposure is now known to increase the risk of strokes in nonsmokers by up to 30%.
- ⊘ Secondhand smoke exposure is higher among people with low incomes. Most exposure to secondhand smoke occurs in homes and workplaces.
- ⊘ Secondhand smoke drifts from unit to unit through air ducts, under doors, holes for piping, electrical outlets, wall and ceiling fixtures, exterior windows, and other pathways.

Live Smoke Free Program

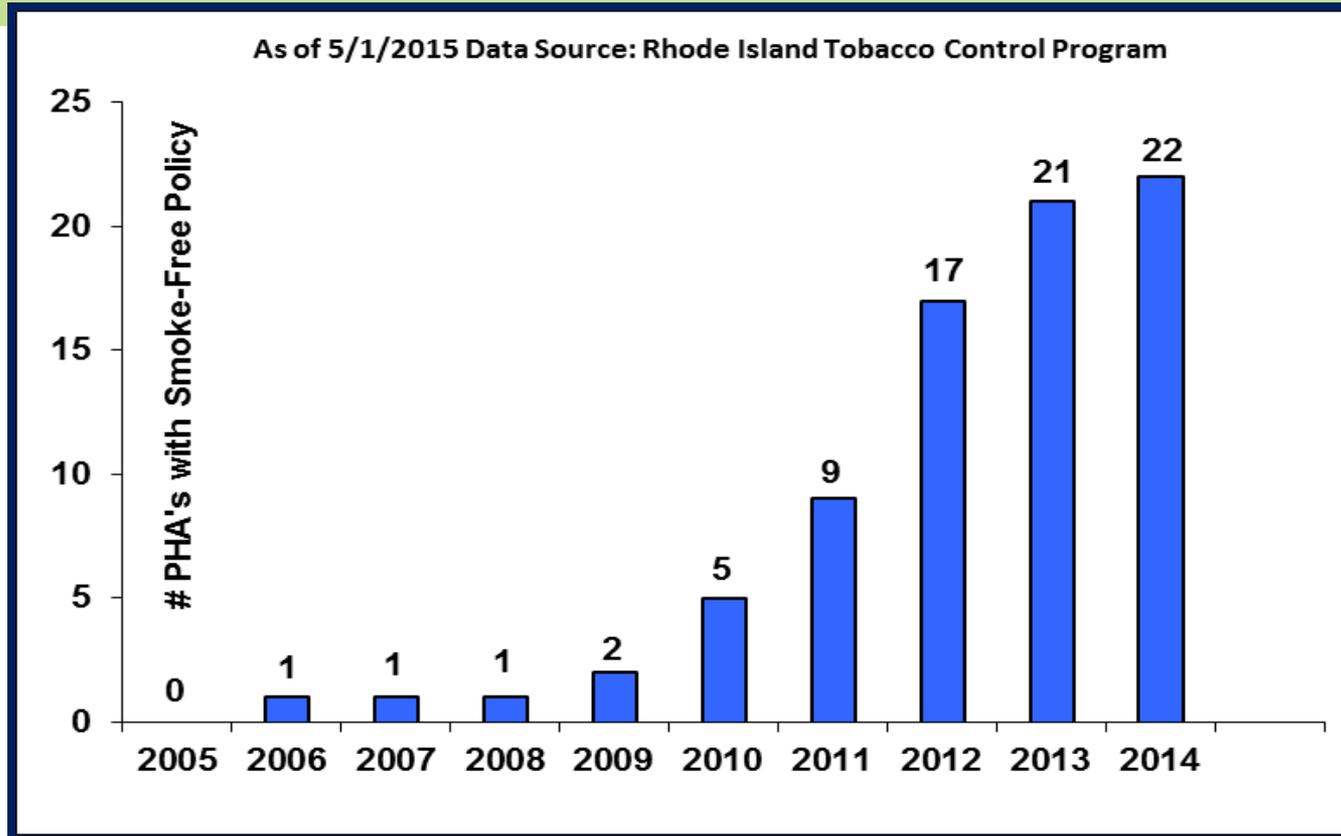

Live Smoke Free Campaign launch 2011

- Campaign kick off using traditional and social media.
- Live Smoke Free web site with downloadable, property manager & resident toolkits, fact sheet and publications.
- Individual technical assistance for PHAs, boards, resident councils and affordable property management groups.
- No cost quarterly workshops for all property types.
- Scope expanded to include smoke free beaches, parks and tobacco free college campuses.

www.livesmokefree.ri.gov

Rhode Island Smoke Free Public Housing Authorities

Description	PHAs with smoke free policies	All PHAs in state
Number of PHAs	22	25
Number of Units	9266	9467
Number of residents	15436	15686

Health Equity Zone (HEZ) Goals

- Defined geographic location; place-based
 - Use of local assessments to establish baseline;
 - Community assets mapping and community readiness;
 - Collective impact framework;
 - Sustainability
-
- HEZ are contiguous geographic areas that have measurable and documented health disparities, poor health outcomes, and identifiable social and environmental conditions to be improved.
 - HEZ must be “small” enough so the plan of action/interventions can have a significant impact on the population (5K minimum)

Health Equity Zone (HEZ) Goals

- Improve health of communities with high rates of illness, injury, chronic disease, or other adverse health outcomes
- Improve birth outcomes
- Reduce health disparities
- Improve the social and environmental conditions of the neighborhood
- Support the development and implementation of policy and environmental change interventions

Addressing Nutrition

CATEGORY	DAILY	3 MEALS, 2 SNACKS		3 MEALS, NO SNACK	PREPARATION
		PER MEAL	PER SNACK	PER MEAL	
TOTAL KCALS	1,500-2,000 kcals (average low-average high)	550 kcals	175 kcals	670 kcals	The daily recommended intake is 3 meals, 2 snacks with calories (kcals) distributed evenly across meals (breakfast, lunch, and dinner). Meal breakdown recommendations are based on a 2,000 kcal diet.
SODIUM	≤ 2,000 mg	≤ 550 mg	≤ 175 mg	≤ 660 mg	Avoid processed and preserved foods to limit sodium levels. Utilize spices and fresh herbs as much as possible.
CHOLESTEROL	≤ 250 mg	≤ 65 mg	≤ 28 mg	84 mg	Replace or eliminate high cholesterol foods in your recipe with lower cholesterol options like egg whites and lean cuts of meat.
CARBOHYDRATES	55% of daily caloric intake (210-275 g for 1500-2000 kcal diet)	50-60 g (1.5-2 oz)	15-30 g (0.5-1 oz)	100 g (≤ 3.5 oz)	When at all possible, use complex carbohydrates; no fried, high sugar foods.
DIETARY FIBER	≥ 30 g	≥ 7 g	≥ 4.5 g	≥ 10 g	Choose ingredients high in fiber whenever possible.
TOTAL FAT	30% of daily caloric intake (50-67 g for 1500-2000 kcal diet)	≤ 20 g	≤ 12 g	≤ 28 g	Using low-fat proteins and finishing with fats that are liquid at room temperature helps to reduce the total fat in a dish.
SATURATED FAT	≤ 10% of daily caloric intake for fat (5-7 g for 1500-2000 kcal diet)	≤ 2 g	≤ 1.2 g	≤ 3 g	Low saturated fat items should be used whenever possible substitute liquid fats and oils listed below when possible.
TRANS FAT	0% added trans fats	0% added	0% added	0% added	Certain foods naturally contain trans fats; additional trans fats should not be added due to associated increase of LDL cholesterol.
LIQUID FATS AND OILS	2-3 tsp (34-45 g)	9-12 g	3.5-4.5 g	12-15 g	Use monounsaturated, and polyunsaturated fats like olive, peanut, canola, corn, soybean, safflower, and sesame oils.
ADDED SUGAR	< 5 Tbsp (75 g) per week	1 Tbsp (15 g) per day	none	1 Tbsp (15 g) per day	Limit added sugars to any meal. If needed, add sugar to one meal in total menu for day.
FRUITS & VEGETABLES	12-16 oz (350-454 g) fruit, 20-24 oz (567-680 g) vegetables, variety of colors and types	8-10 oz (227-285 g)	4-5 oz (136-142 g)	11-13 oz (312-369 g)	50% of meal should be a variety of colorful, low starch fruits and/or vegetables. Potatoes, corn, and other starchy vegetables should be counted as carbohydrates.

QIN-QIOs

- CMS's QIO Program Approach to Clinical Quality –
Triple Aim:

- QIN-QIOs are regional, multistate entities providing services to **2 to 6 states for 5 year contracts**
- Highly competitive proposal process - **only 14 QIN-QIO contracts were awarded**

New England QIN-QIO

- Two successful QIOs *pool expertise and resources* to engage beneficiaries and providers **in improving care, improving health and reducing costs across New England**
- Identified throughout six-state region as:

New England QIN-QIO

- Led and administered by **Healthcentric Advisors**
 - Focus areas: MA, ME, RI
- Partner – **Qualidigm**
 - Focus areas: CT, NH, VT

Cardiac Health

“You’ve got the blood pressure of a teenager – who lives on junk food, TV and the computer.”

Cardiac Health Task Goals

Improve Cardiac Health implementing
Million Hearts® ABCS:

- **A**spirin therapy
- **B**lood pressure control
- **C**holesterol control
- **S**moking cessation
- Reduce Cardiac Healthcare Disparities

Cardiac Health Task Goals

Increase Electronic Data Reporting

- Physician Offices
 - 8 practices (30 providers)
 - The Physician Quality Reporting System (PQRS)
- Home Health Agencies
 - 14 HHAs
 - HHQI National Cardiovascular Data Registry

Improvement Strategies

- Implement Team Care Model
- Data capture
- Actionable data analysis
- Workflow evaluation and redesign
- PDSAs to mitigate barriers
- Sharing Million Hearts & HHQI tools & resources
- Spreading best practices

Case Study

Internal Medicine practice

- EHR- PQRS reporting on HTN control
- PCMH
- 6 Providers
 - 5 providers scoring well above the state median (65%)
 - 1 provider scoring below state median (60%)

Interventions

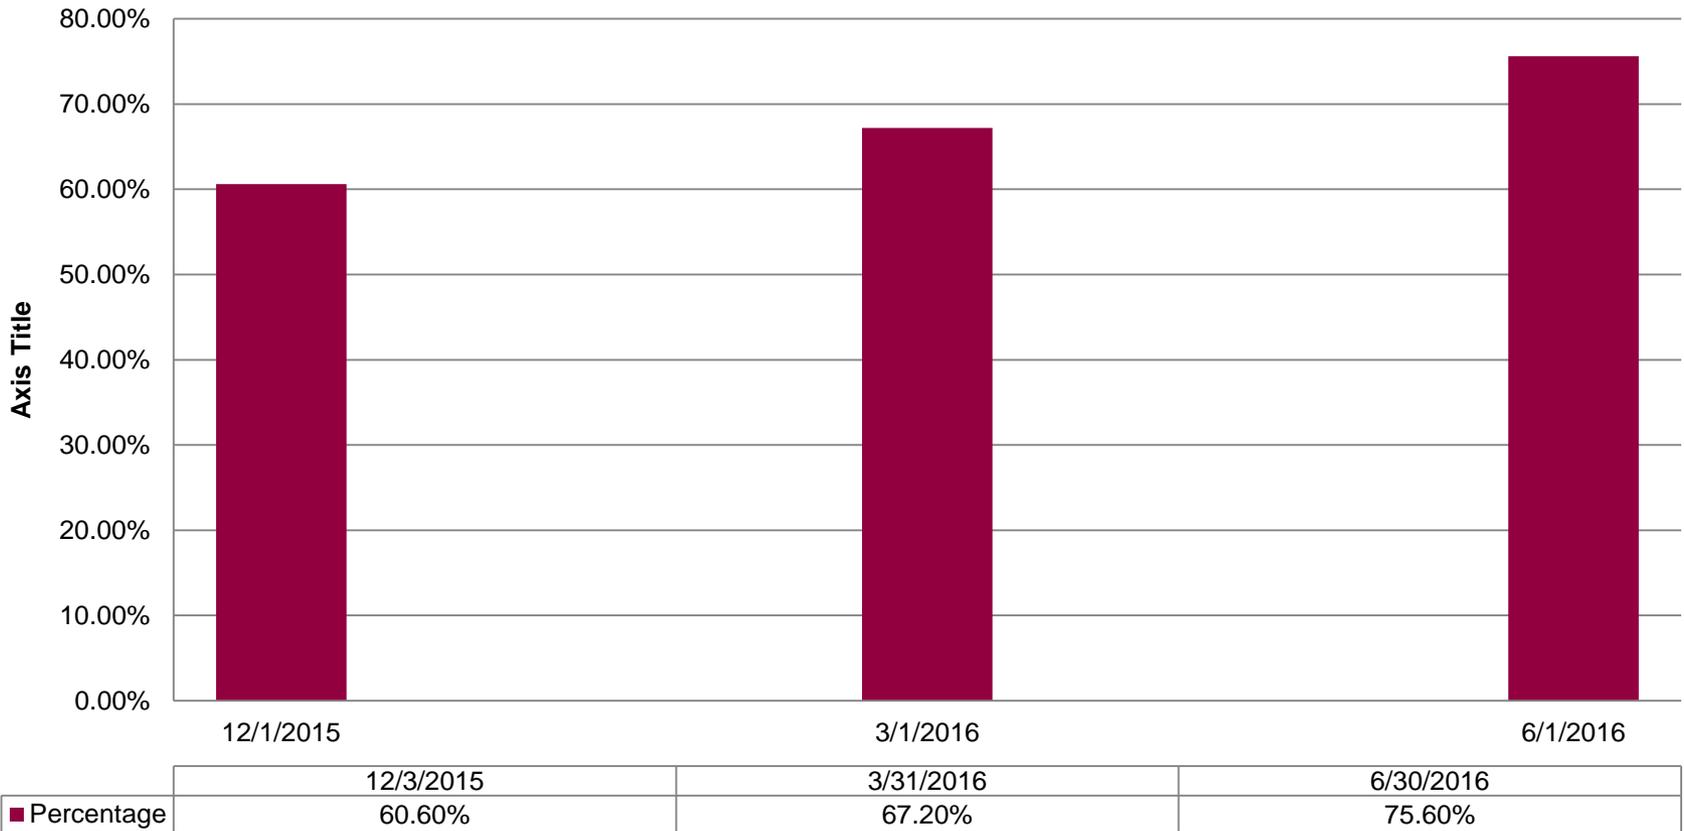

- Team engagement
- Education on proper technique
- Correction to documentation
- BP at every visit not just annual exam
- Outreach calls for follow-up visits
- BP Action Plan Information sheets for pts

Case Example HTN Control

Percentage

Sustainability

- Continue quarterly data analysis
- Continue BP at every visit
- Increase pt engagement
 - Shared decision making
 - Action plans
- Follow-up visits
- Team Engagement

**Overview of the
American Heart Association and
Programs and Resources
that align with Million Hearts[®]**

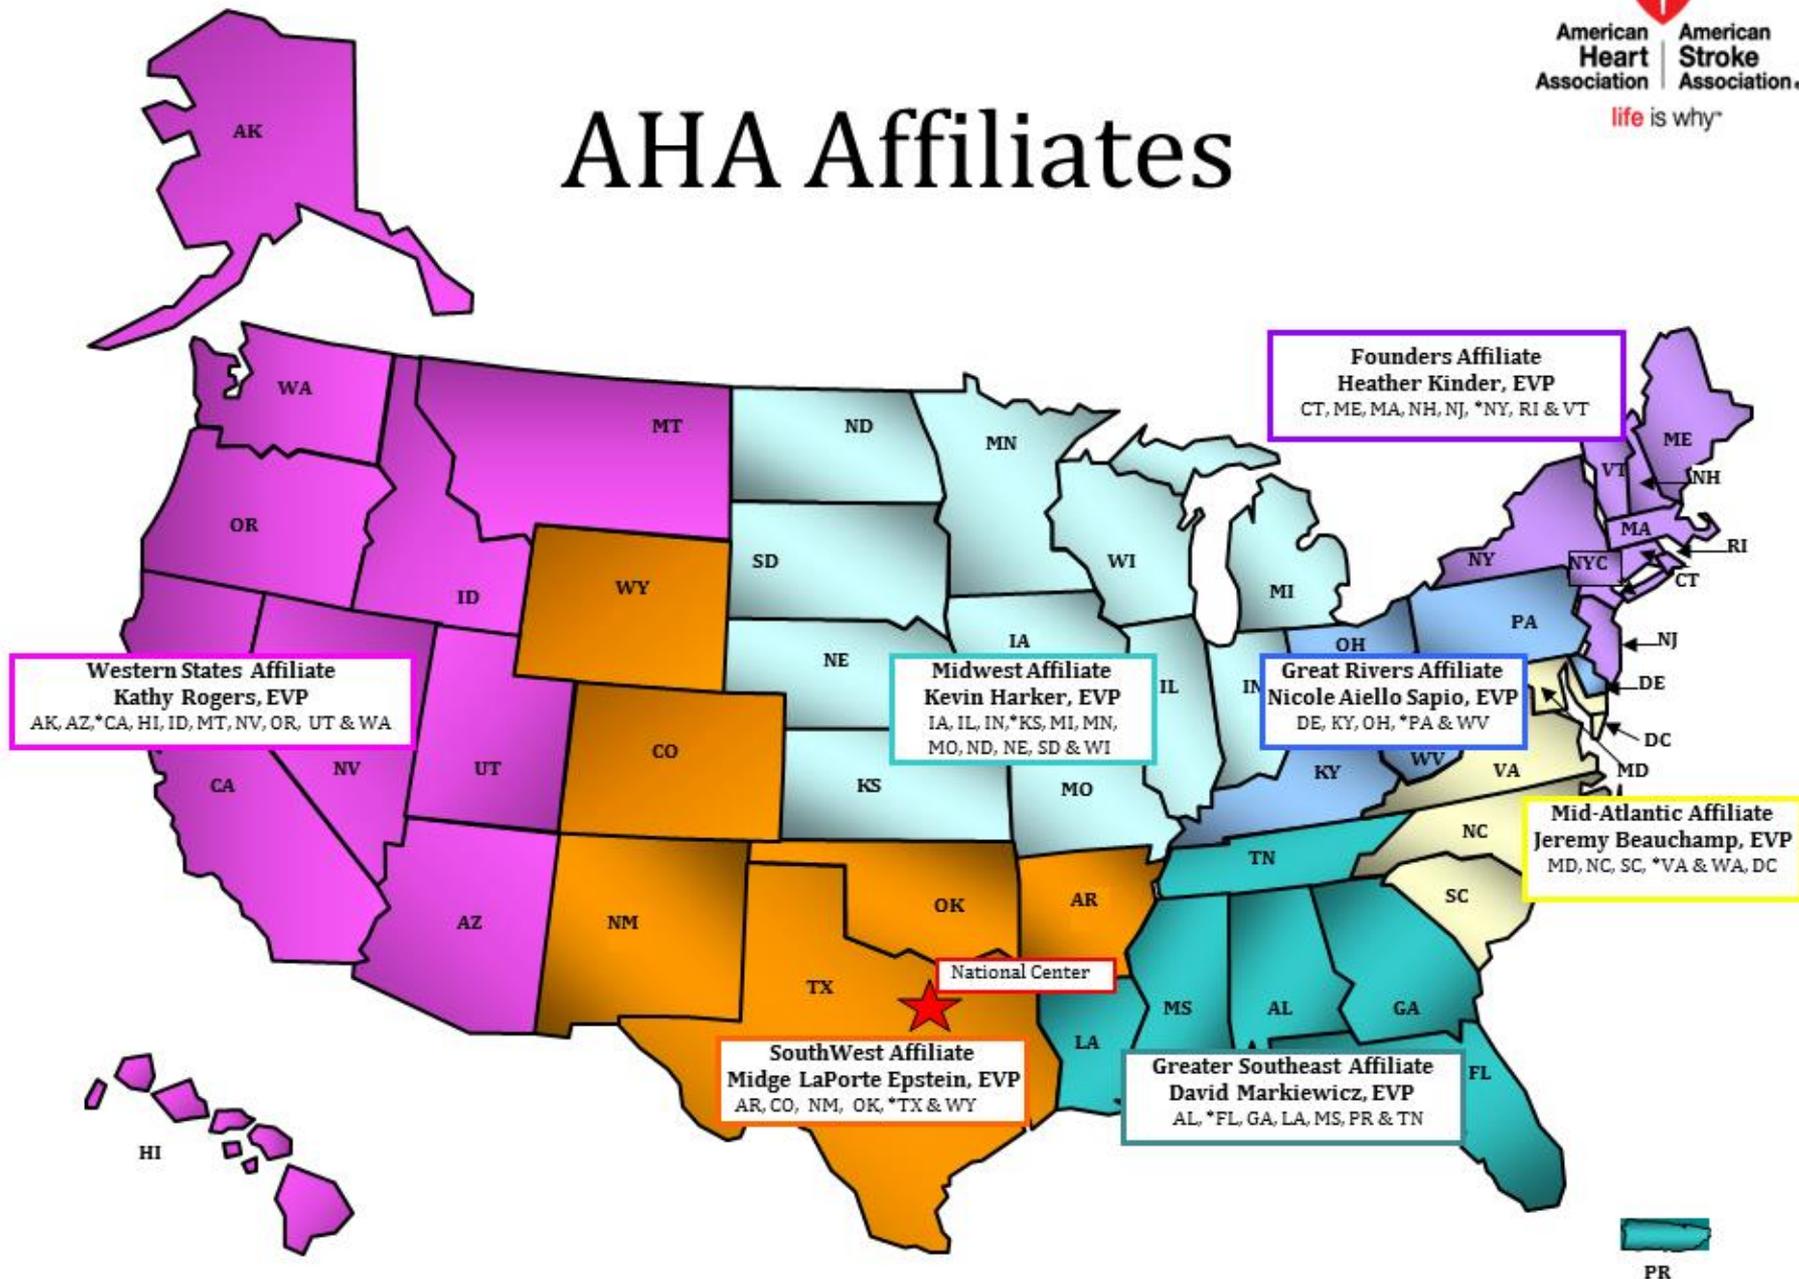

Mission

Building healthier lives, free of cardiovascular diseases and stroke.

Our 2020 Impact Goal

By 2020 to improve the cardiovascular health of all Americans by 20% while reducing deaths from cardiovascular diseases and stroke by 20%.

AHA Affiliates

Building a Culture of Health

A culture in which people live, work, learn, play and pray in environments that support healthy behaviors, timely quality care and overall well-being.

AHA and Million Hearts® Spotlight on Rhode Island

Advocacy Priorities

- Healthier Food Choices in Public Places
- School Marketing
- Physical Education
- Bikeway Development
- Tobacco Control Funding
- Tobacco 21

AHA and Million Hearts® Spotlight on Rhode Island

Target BP

- Nationwide initiative to help healthcare providers and patients achieve better blood pressure control at the best levels to improve health
- Support physicians and care teams in helping their patients with high blood pressure reach a blood pressure goal of lower than 140/90 mm Hg, based on current AHA guidelines

AHA and Million Hearts® Spotlight on Rhode Island

Target BP

- Health Impact: Driving toward moving 13.6 million individuals from uncontrolled to controlled blood pressure, through Federally Qualified Health Centers (FQHC) and clinics serving underserved/vulnerable populations and clinics within large healthcare systems.

AHA and Million Hearts® Spotlight on Rhode Island

Multicultural Health Priorities/Target BP

- Increase # of registered FQHCs and clinics
- Increase # of adult patients reached

AHA and Million Hearts® Spotlight on Rhode Island

Multicultural Health Priorities/Target BP

- Face to Face meeting with clinical lead
- Provide trainings on Target: BP tools and resources
- Equip clinics with consumer education tools
- Connect clinics to community-based programs for self-monitoring like Check. Change. Control.
- Consulting services provided
- Clinical lead or team invited and attending workshop/webinar or hospital recognition event

The Guideline Advantage (TGA)

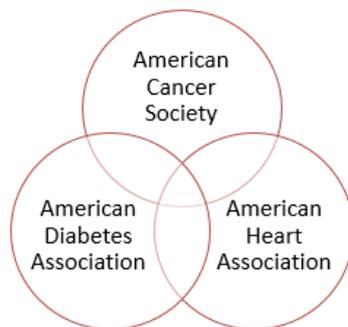

THE GUIDELINE
ADVANTAGE

THE GUIDELINE
ADVANTAGE

The Tri-Agency Relationship

- A joint program of the American Cancer Society, the American Diabetes Association, and the American Heart Association
- Each organization has long developed scientific statements and guidelines specific to prevention and disease management
- Shared goals:
 - Sets national goals and objectives that compliment their guidelines
 - Common interest in translating those guidelines into practice

Advantages to Practices & Physicians

- Qualified Clinical Data Registry (QCDR) and Specialized Clinical Data Registry for Meaningful Use Stage 2
- Comprehensive Data Assistance
- AHA Quality & Systems Improvement Consultation and expertise
- State-of-the-art population health management technology
- Clinic and system aggregation, with available physician-level reporting
- Tools for creating action lists
- Alignment with key national initiatives
- National and State Benchmarking
- Quality Improvement Community

TGA Fact Sheet

- Million Hearts Measures in TGA: High Blood Pressure Control, Tobacco Use Screening, Tobacco Use Cessation Intervention, Ischemic Vascular Disease Use of Aspirin or Other Antithrombotic
- New as of Aug 8, 2016 – physicians at TGA participating practices may now receive Maintenance of Certification Improvement in Medical Practice (Part IV) credit for their engagement

Tools and Resources

- AHA online tools:
 - Heart 360
 - My Life Check®
 - Heart Attack Risk Calculator
- Sodium Leadership Community
- Multi-Cultural/Faith-based Initiatives:
EmPowered to Serve
- Get With The Guidelines (TGA) hospital-based quality improvement program
- Communications
- Healthy Workplace Food & Beverage Toolkit
- You're the Cure – www.youarethecure.org

Discussion

1. Is there a program you were unaware of that you would like to explore further for implementation or application in the state?
2. On which topics would you like additional information?
3. Other questions

**Overview of the
American Heart Association and
Programs and Resources
that align with Million Hearts[®]**

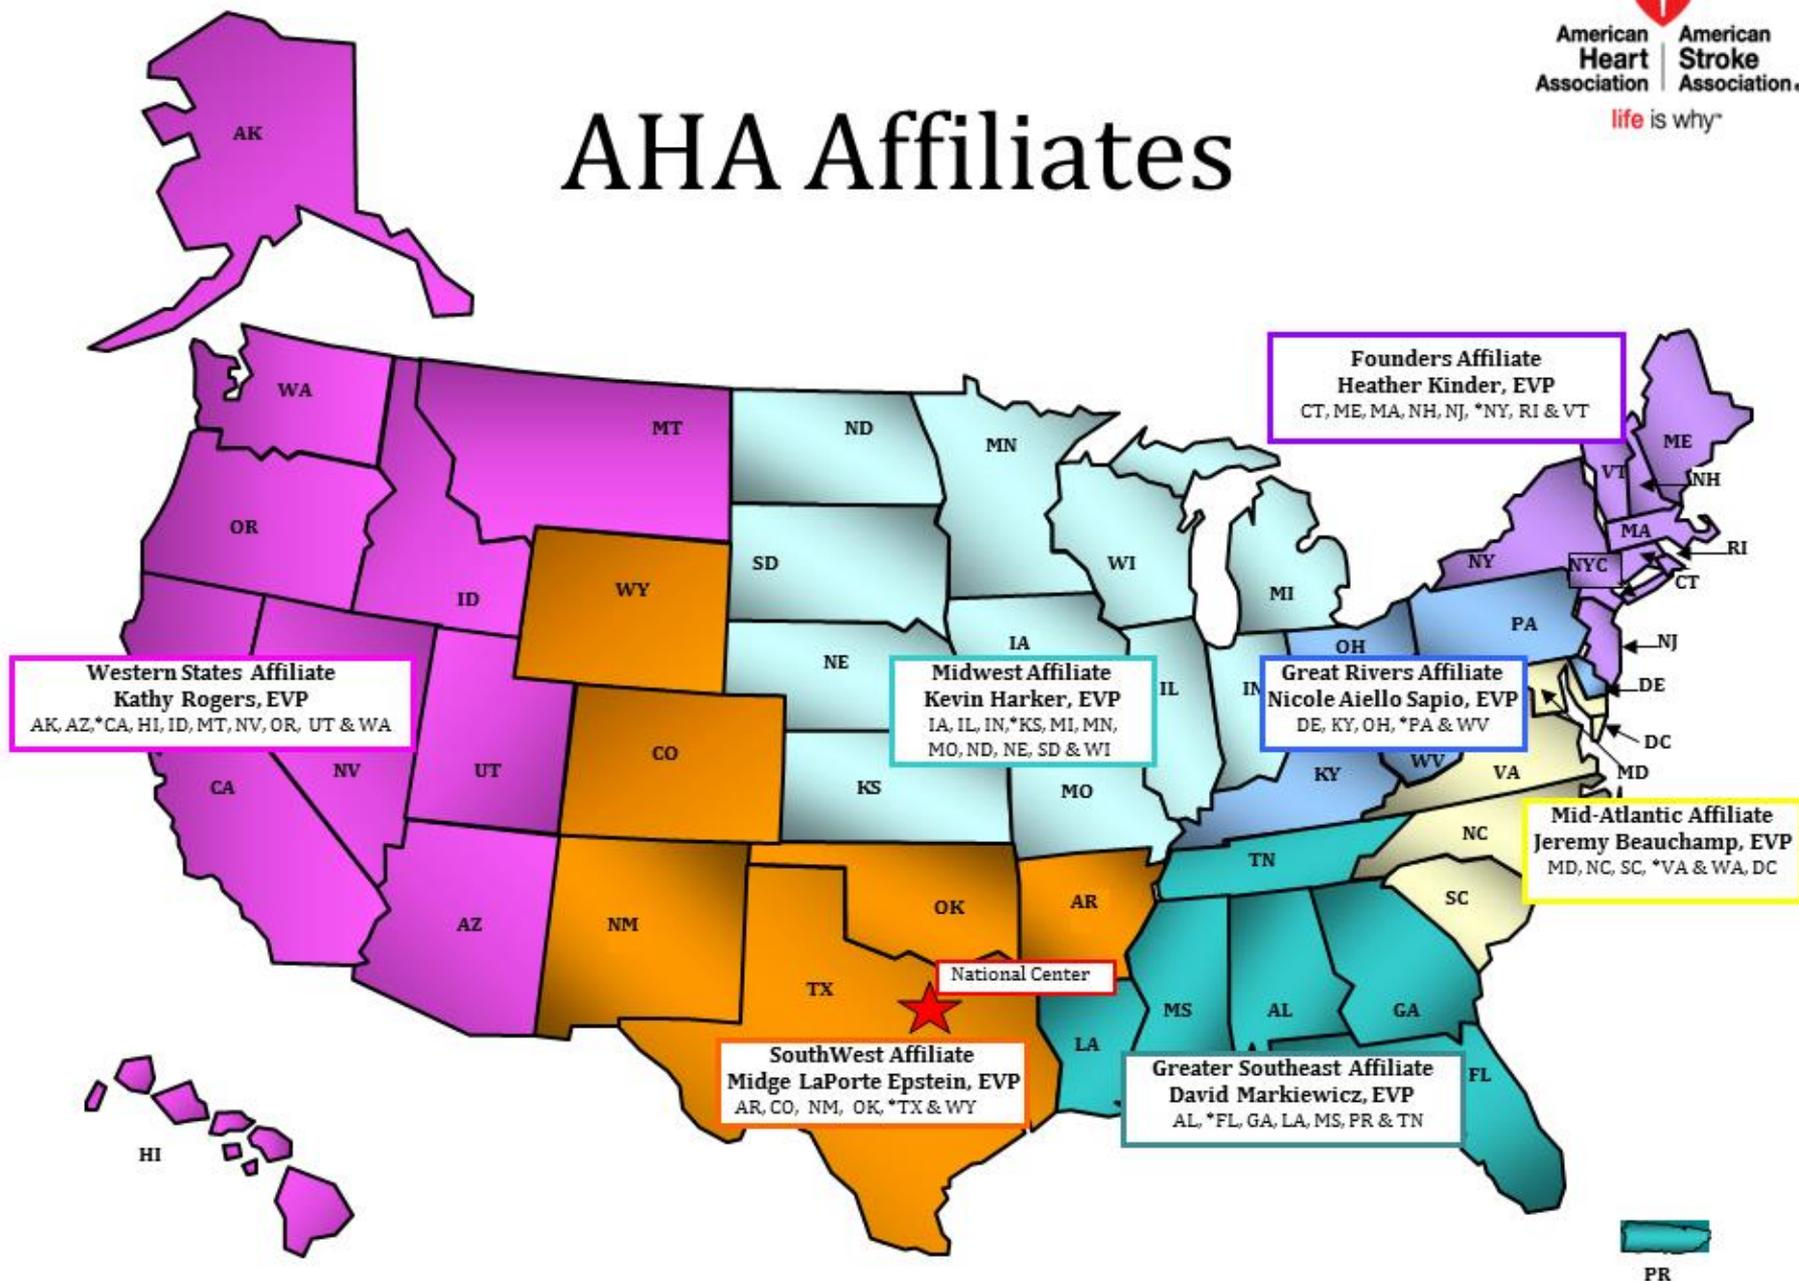

Mission

Building healthier lives, free of cardiovascular diseases and stroke.

Our 2020 Impact Goal

By 2020 to improve the cardiovascular health of all Americans by 20% while reducing deaths from cardiovascular diseases and stroke by 20%.

AHA Affiliates

Building a Culture of Health

A culture in which people live, work, learn, play and pray in environments that support healthy behaviors, timely quality care and overall well-being.

AHA and Million Hearts®

Spotlight on Idaho

Advocacy Priorities

- Health Insurance Coverage - Close the Gap
- Time Sensitive Emergencies - Stroke and STEMI Designations and Registries
- Healthy and Active Programs - Safe Routes to School, P.E.
- Tobacco Free – Smoke Free Air, Tobacco Free Idaho, Tobacco to 21

Advancing Million Hearts®:

AHA and Heart Disease and Stroke Prevention

Building a Sustainable HBP Program

Clinical Pharmacists

2008 – 2010

- ✓ Remote Monitoring Study via Kaiser Clinical Pharmacists
- ✓ Six month SBP control significantly higher than control group. Suggests healthcare cost saving

Community Settings

2010 - 2011

- ✓ Check It. Change It. Community-based intervention in Durham County
- ✓ In patients that began the study with a BP of > 150/90, systolic BP decreased by 24.2 mmHg and diastolic BP decreased by 10 mmHg.

Enlisting Partners

2012 - Present

- ✓ AHA joined with Million Hearts to host a forum that included partners across industries positioned to impact the issue of HBP
- ✓ Initial meeting was the impetus for the launch of AHA's HBP Leadership Community based on attendees' desire to continue the innovation, sharing and exchange of solutions

Innovation in the Field

2012 - 2013

- ✓ Check It. Change It. set the stage for larger, community-based model run by the AHA focused on high-risk pop.
- ✓ Grants to local market staff designated for rapid development, execution and testing of programs using partners and volunteers.
- ✓ Similar results to Check It. Change It. Lowering BP by 5 mmHG, with more significant drops between 11mmHG and 26 mHG in high risk groups

Check.
Change.
Control.™

Why it Works: Key Evidence-Based Scientific Principles

Self Monitoring Makes a Difference

Proven track record for taking blood pressure readings at home or outside of the healthcare provider office setting.

- Use of digital self-monitoring and communication tool
- Charting & tracking improves self-management skills related to blood pressure management

Personal Interaction Makes a Difference

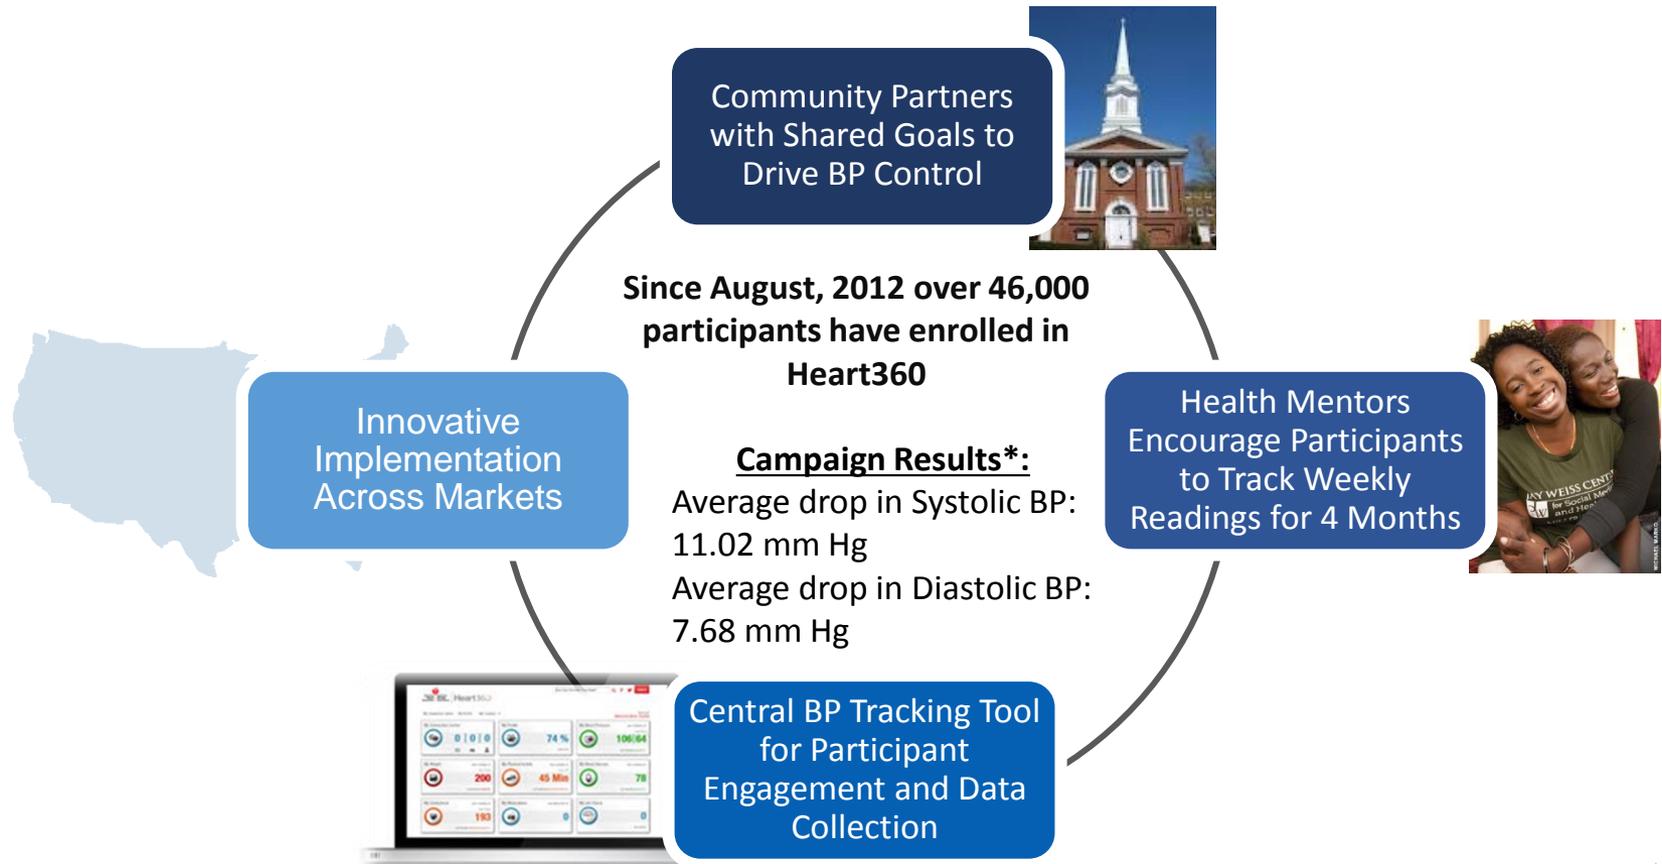

Health mentors can motivate and encourage participants.

Multicultural Program Investments Make a Difference

Hypertension creates a health disparity for African-Americans.

Program Components

Benefits extend even with partial engagement:

Even those participants who did not meet the full retention criteria saw declines in BP numbers.

WHAT DO THESE RESULTS MEAN?

Also, a 5mmHg reduction in systolic blood pressure would increase the prevalence of ideal blood pressure from 44.26% to 65.31%

TARGET: **BP**™

***Target: BP** is a national movement aimed at improving blood pressure control, to reduce the number of Americans who have heart attacks and strokes. Target: BP provides physician practices and health systems resources and support to achieve a 70% blood pressure control rate with a **target** of achieving 80% or higher.*

Why launch Target: BP now?

SPRINT study results

Increased access to care

Policies incentivize HCP's to better control

AHA 2020 goals are imminent

Synergizing with Million Hearts program

What is Target: BP?

- ✓ A call to action motivating hospitals, medical practices, practitioners and health services organizations to prioritize blood pressure control
- ✓ Recognition for healthcare providers who attain high levels of blood pressure control in their patient populations, particularly those who achieve 70 or 80 percent control
- ✓ A source for tools and assets for healthcare providers to use in practice, including the AHA/ACC/CDC Hypertension Treatment Algorithm and the AMA's M.A.P. Checklist

Protocols to guide evidence-based prescribing

Did you know?

National experts recommend that clinical teams use hypertension treatment protocols to manage patients with hypertension.¹ Just as a football team's playbook describes what players should do during a play, a treatment protocol clearly spells out what a care team should do.

Why are protocols important?

Studies show that getting blood pressure under control quickly reduces the risk for heart attacks, strokes and even death.² Treatment protocols help clinicians and staff work together as a team to identify which patients to treat, when to treat them, what medications to use, what the target blood pressure should be and how often follow-up should occur.³ However, it is important to note that clinicians should not use a protocol to replace sound medical decision-making for a given patient's unique situation.

Where can you find examples of evidence-based treatment protocols to use?

If your organization has not already developed an evidence-based treatment protocol, the Million Hearts[®] initiative has a Web page containing several examples of evidence-based treatment protocols for improving blood pressure control. Located at <http://millionhearts.hhs.gov/resources/protocols.html>, these evidence-based treatment protocols help the clinical team to address:

- **When** patients should receive treatment
 - Establish treatment initiation cut points—In the case of the Million Hearts[®] interactive protocol for controlling hypertension in adults, the treatment initiation cut off is set at $\geq 140/90$ mm Hg for most patients.
- **What** evidence-based treatment patients should receive
 - Evidence-based lifestyles changes—such as losing weight, using the dietary approaches to stop hypertension (DASH) eating plan or engaging in regular aerobic exercise—can reduce a patient's systolic blood pressure by 10–15 mm Hg.
 - Four medication classes are recommended for most patients: thiazide diuretics, calcium channel blockers, and either ACE inhibitors or ARBs, but **not** both.
 - Single-pill combination therapy is recommended for patients with high blood pressure, especially those with a blood pressure of 160/100 mm Hg or higher.
 - Most patients (up to 90 percent based on the ALLHAT Trial) should be able to achieve blood pressure control by taking one to three medications.⁴
- **How** a practice or health center should follow up after treatment begins
 - Early and frequent follow-up (every two to four weeks) is recommended so that patients can be advised to rapidly adjust or fine-tune their treatment until their blood pressure is controlled.
 - Keep in mind that follow-up does not always have to mean a visit with a primary care provider. Many practices or health centers have built successful follow-up programs around self-measured blood pressure monitoring or drop-in blood pressure checks with medical assistants or RNs.

Always make sure patients know what to do should their home blood pressure measurement fall outside the pre-determined acceptable range or if they experience any symptoms with a high or low blood pressure measurement, including seeking emergency treatment if appropriate. This guidance to the patient should be individualized by the clinician and reinforced by clinical staff at the initiation of any SBP monitoring program.

Lifestyle + Risk Reduction
Cholesterol

How Can I Monitor My Cholesterol, Blood Pressure and Weight?

High cholesterol, high blood pressure and being overweight or obese are major risk factors for heart disease and stroke. You should be tested regularly to know if you have high cholesterol or high blood pressure. That's because elevated cholesterol and blood pressure have no warning signs. And you should talk to your doctor about a healthy weight for you.

It is important to know your numbers. You can record your blood pressure, cholesterol and weight in the tracker below to track your progress. Work with your healthcare provider to determine your risk and manage it. Then ask how often to measure your levels.

Have your cholesterol levels measured every five years, or more often if needed. A fasting lipoprotein profile is the best measurement. Talk to your doctor about your numbers and how they impact your overall risk.

	Date	Date	Date	Date	Date	Date
Blood Pressure						
Total Cholesterol						
HDL Cholesterol						
Weight						

What can I do to lower my cholesterol and blood pressure?

- Eat a nutritious, well-balanced diet low in added sugars, sodium, and saturated fats and eliminate *trans* fats. A healthy diet includes a variety of fruits, vegetables, whole grains, low-fat dairy products, poultry, fish, legumes, nontropical vegetable oils and nuts. You can adapt this diet to your calorie needs and personal food preferences.
- Eat oily fish, such as salmon, twice a week.
- Limit red meats. If you choose to eat red meats, select lean cuts of meat. Trim all visible fat and throw away the fat that cooks out of the meat.
- Remove the skin from poultry.
- Substitute meatless or "low-meat" main dishes for regular entrees.
- Aim for a diet that achieves 5% to 6% of calories from saturated fats and a reduced percent of calories from *trans* fat.
- Aim to consume no more than 1500 mg per day of sodium. Limit your intake of processed, packaged and fast foods which tend to be high in sodium.

Elements Associated with Effective Adoption of Protocols

Practice Team-Base Care

- Make hypertension control a priority.
- Fully use the expertise and scope of practice of every member of the health care team.
- Include the patient and family as key members of the team.
- Learn about community resources and recommend them to patients.
- Conduct pre-visit planning to make the most of the care encounter.
- Look for opportunities to check in with patients between visits and adjust medication dose as needed.
