

## February 2018 – Million Hearts® Messaging: Make Heart Healthy Lifestyle Changes

Honor American Heart Month by encouraging patients age 35-64, especially young adults, to make heart healthy lifestyle changes, such as increasing physical activity and managing blood pressure. Making heart healthy changes at a young age will benefit lives now and for years to come.

### February's Focus

The rates of heart attacks and stroke among individuals between the ages of 35 and 64 are rising, which is why Million Hearts® 2022 has designated this group as a priority population. Current data show that individuals in the younger age groups who have high blood pressure or high cholesterol may be less likely to receive medication for their conditions, leaving them at greater risk for heart attacks and

stroke. Additionally, risk factors for younger adults – such as physical inactivity and tobacco use – are increasing. Million Hearts® is calling on health professionals to honor American Heart Month by encouraging patients age 35-64, especially young adults, to make heart healthy lifestyle changes now.

### **Did you know?**

- American Heart Month is a federally designated event that has taken place every year since February 1964, when heart disease accounted for more than half of all U.S. deaths.
- Now, cardiovascular disease accounts for about 844,000 deaths in the U.S. each year. That's about 1 in every 3 deaths.
- New research shows that heart disease death rates are declining more slowly than they have in the past, especially among adults age 35 to 64.
- In many communities across the U.S., death rates are increasing among adults age 35-64.
- Additionally, young adults' rates of risk factors, such as physical inactivity, tobacco use and hypertension, are increasing.

The health of an individual at the age of 50 can be a window into their health in older age. That's why it's critical to encourage young adults to make heart healthy changes now. Doctors, nurses and other health care professionals should seek out those who would benefit from earlier treatment of elevated blood pressure and lipids. Additionally, young adults should be encouraged to increase their physical activity, eat heart healthy foods and reduce tobacco use. Make American Heart Month count by helping patients make a change that will benefit their heart health now and for years to come.

### **Heart Month events happening in February:**

- The American Heart Association's Go Red for Women campaign is sponsoring [National Wear Red Day](#) on Friday, Feb. 2. Use the following hashtags: #WearRedandGive #WearRedDay #GoRedGetFit
- Woman's Day magazine's [Red Dress Awards](#) will take place in New York City on Tuesday, Feb. 6.
- [Congenital Heart Defect Week](#) is Feb. 7-14, a week to raise awareness about CHD and recognize families and patients.
- The American Heart Association's Go Red for Women campaign's [Red Dress Collection 2018](#), presented by Macy's, will be broadcast at 8 p.m. EST on Feb. 8. Follow #RedDressCollection
- The annual Congressional Women Go Red Photo will be taken on Feb. 14.
- The Ohio State University is re-launching its [Million Hearts® Fellowship module](#) on Thursday, Feb. 15, from 3-4 p.m. EST. This free, online module serves as a teaching tool for health sciences' students and healthcare professionals who will learn to provide community outreach through cardiovascular screenings and education that improves cardiovascular health. Nurses, physicians, community health workers, health sciences' faculty, and all healthcare professionals are encouraged to participate in this important initiative. Dial-in telephone number: 1-877-820-7831; Participant Passcode: 636580# Or, click [here](#) to connect online.
- CDC's [Public Health Grand Rounds](#) on Tuesday, Feb. 20, will focus on Million Hearts® 2022: A Compelling Call to Action. Tune in at 1 p.m. EST to watch via a live Web stream.
- The [American Kidney Fund is hosting a free Webinar](#) on Thursday, Feb. 22, titled, "How to be a Heart Healthy Kidney Patient: The Role of Sodium and Fluid." Tune in at 1 p.m. EST.
- National [Heart Valve Disease Day](#) will take place on Feb. 22.

#### **Honor American Heart Month by challenging young adults to make heart healthy choices**

American Heart Month is a federally designated event that has taken place every year since February 1964, following a proclamation by President Lyndon B. Johnson. Back then heart disease accounted for more than half of all U.S. deaths. Now, cardiovascular disease accounts for about 844,000 deaths in the U.S. each year. That's about one in every three deaths.

While much progress has been made to slow the rate of deaths caused by cardiovascular disease, new research shows that heart disease death rates are declining more slowly than they have in the past, especially among adults age 35 to 64. In many communities across the U.S., cardiovascular disease death rates are increasing among adults age 35-64 and their rates of risk factors, such as physical inactivity, tobacco use and hypertension, are also increasing. Current data show that individuals in the younger age groups who have high blood pressure or high cholesterol may also be less likely to receive medication for their conditions, leaving them at greater risk for heart attacks and stroke.

The health of an individual at the age of 50 can be a window into their health in older age. That's why it's critical to encourage young adults to make heart healthy lifestyle changes now. Doctors, nurses and other health care professionals should seek out those who would benefit from earlier treatment of elevated blood pressure and lipids. Additionally, young adults should be encouraged to increase their physical activity, eat heart healthy foods and reduce tobacco use. Make American Heart Month count by helping patients making a change that will benefit their heart health now and for years to come.
