Cardiovascular Consultants Medical Group  
Stanford Healthcare

[nwhite@stanfordhealthcare.org](mailto:nwhite@stanfordhealthcare.org)

Walnut Creek and Concord, California

# HEART FAILURE BY THE NUMBERS

**OVER HALF**  
OF THE HEART FAILURE COSTS  
ARE SPENT ON HOSPITALIZATION

**5.1 MILLION PEOPLE**  
IN THE U.S. SUFFER FROM HEART FAILURE<sup>2</sup>

**1000000+**

OVER 1 MILLION HEART FAILURE ADMISSIONS  
EACH YEAR<sup>3</sup>

BY 2030, EVERY U.S.  
TAXPAYER COULD PAY  
**\$244** EACH YEAR  
FOR HEART FAILURE EXPENSES<sup>4</sup>

## CURRENT APPROACHES

PHYSICIANS TYPICALLY MANAGE HEART FAILURE BY  
MONITORING SYMPTOMS SUCH AS BODY WEIGHT AND  
BLOOD PRESSURE USING A TELEHEALTH SCALE

EVEN WITH DAILY SELF-MONITORING<sup>5</sup>

**25%** OF HEART FAILURE PATIENTS ARE  
READMITTED TO THE HOSPITAL  
WITHIN 30 DAYS

**50%** OF HEART FAILURE PATIENTS ARE  
READMITTED TO THE HOSPITAL  
WITHIN 6 MONTHS

[ESTIMATED U.S. HEART FAILURE COST<sup>4</sup>]

**\$31 BILLION**

2009

**\$70 BILLION**

2030

- **Sociodemographic Factors**
  - Age
  - Sex
  - Race
  - Living Status
  - Insurance

# Traditional Model For Out Patient HF Care

# New Model For Out Patient HF Care

- **Multidisciplinary Disease Management**
  - **Components**
    - **Pre-discharge Education to enhance self-care**
    - **Nurse-led coordination of care and post-discharge surveillance**
    - **Access to providers with specialty expertise in heart failure**
  - **Estimated Impact**
    - **25% reduction in overall mortality**
    - **26% reduction in HF (re)hospitalization**
    - **19% reduction in overall hospitalization**
  - **Generally cost-saving or cost-neutral**
  - **Greatest Impact in the early post-discharge period**

Not a clinic where pts are seen for a visit

We don't bill pts

A different MD doesn't see the pt –so no interference

An “RN Navigator” follows pt through transition of care

Pts can get access to Home health etc

“RN Navigator” interacts with pt + Primary Cardiologists

Visits to ER can be often aborted

We provide scales to patients

# Current CMS John Muir Readmissions for HF

## Rate of unplanned readmission for heart failure patients

Why is this important?

Hide Graph

U.S. national rate of unplanned readmission for heart failure patients = 23.0%

# Current CMS John Muir Mortality for HF Readmissions

## Death rate for heart failure patients

Why is this important?

Hide Graph

U.S. national death rate for heart failure patients = 11.7%

# Conclusions

- **Models for predicting readmission may have limited utility beyond triage in clinical practice**
- **Durable impact on preventing heart failure readmissions requires a focus beyond 30 days**
- **No single intervention is likely to be universally effective**
- **Different approaches may be necessary to manage different phases of illness**
- **Noncardiovascular comorbidities, adherence, and social/environmental factors must be addressed in tandem with heart failure management**
- **Alternatives to the ED for ambulatory triage and intervention are essential**

## New tool-Heart Failure-ST2

**UC Irvine Health**

## ST2

# 2013 ACCF/AHA Guideline for the Management of HF

---

As a biomarker of myocardial fibrosis, soluble ST2 is not only predictive of hospitalization and death in patients with HF but also additive to natriuretic peptide levels in their prognostic value. Strategies that combine multiple biomarkers may ultimately prove beneficial in guiding HF therapy in the future.

# Biomarker : “ST2, Serum”

# How is it being implemented here?

---

- For Acute HF admission:
  - ST2 on admission
  - and 48 hours after 1<sup>st</sup> draw
- Management in the out-patient clinic
  - Baseline ST2
  - If <35 repeat with acute HF symptom
  - If <35 repeat within 6-12 months
  - If  $\geq 35$  Repeat 2-3 weeks after change in QDMT

# ST2 Could Drive Resource Allocation

# PA Pressure monitoring (CardioMEMs)

## UC Irvine Health first in Orange County to use remote heart failure monitoring system

Implanted CardioMEMS sensor helps reduce heart failure-related hospital readmissions

February 10, 2015

UC Irvine Health is the first medical center in Orange County to offer heart failure patients a wireless system that allows cardiologists to remotely monitor their pulmonary artery pressure and heart rate measurements.

Real-time access to this data enables doctors to proactively manage a patient's condition, helping to reduce the rate of hospital readmission related to heart failure, the leading cause of hospitalization among adults 65 and older in the U.S., according to the American College of Cardiologists.

Dr. Pranav Patel, UC Irvine Health

Heart failure refers to the progressive weakening of the heart muscle until it no longer pumps enough blood to meet the body's needs. Advances in treatment allow more patients to survive hospitalization for heart failure, but more than 50 percent of them experience a new onset of symptoms and end up being readmitted within six months. Cardiologists hope the CardioMEMS Heart Failure System will help break this cycle.

Dr. Pranav Patel, chief of the UC Irvine Health Division of Cardiology, implanted the sensor in an 84-year-old male patient on Feb. 6.

"This technology will help change the way we manage heart failure patients," said Patel. "Once the patient returns home, they must pay careful attention to changes in weight, ankle or abdominal swelling and shortness of breath. CardioMEMS monitors their heart rate and artery pressure daily, and transmits that information to a secure database at the hospital or clinic for review by a physician or a nurse. We can identify early warning signals before the patient

# UC Irvine Health Readmission Interventions

## Future Intervention

---

- Lacier LACE score with Dx algorithm and age
- Standardized approach (cross-training)
- Enhance PM discharge huddles
- Increase collaboration of multidisciplinary team
- Improve discharge instructions for social aspects
- Increase referrals to medication safety clinics
- Increase use of novel approach (PA pressure monitoring & ST2)
- Expand on ED Transitions of Care
  - CM and SW screening in ED
- **Creation of a inpatient transition of care team**
- **Opening of a transition of Care Clinic**

**THANK YOU**

## Performance Metrics for Cardiovascular Care

### Myocardial infarction

**Inclusion criteria:** All patients admitted with MI (ACS symptoms + abnormal troponin level)

**Performance metrics:**

- Aspirin prescribed at discharge
- Beta-blocker prescribed at discharge
- Statin prescribed at discharge
- ACE-I or ARB prescribed at discharge if LVEF < 40%
- Measurement of LVEF during the current hospitalization (echo, nuclear, or ventriculogram)
- Referral to cardiac rehabilitation before discharge
- Smoking cessation counseling for patients who have smoked in the previous year

### Heart failure

**Inclusion criteria:** All patients with a diagnosis of heart failure during the current admission

**Performance metrics:**

- ACE-I or ARB prescribed at discharge if LVEF < 40%
- HF-specific beta blocker (carvedilol or metoprolol succinate) prescribed at discharge
- Measurement of LVEF before arrival, during hospitalization, or planned after discharge
- Follow-up appointment scheduled and documented (including location, date, and time for follow-up visit)

*Front*

### ICD

**Inclusion criteria:** All patients with a new ICD implanted during the current admission

**Performance metrics:**

- ACE-I or ARB prescribed at discharge if LVEF < 40%
- Beta-blocker prescribed at discharge if LVEF < 40%
- Beta-blocker prescribed if there is a history of myocardial infarction

### PCI

**Inclusion criteria:** All patients undergoing PCI (coronary angioplasty or stent) during the current admission

**Performance metrics:**

- Aspirin prescribed at discharge
- P2Y12 inhibitor (clopidogrel, prasugrel, or ticagrelor) prescribed at discharge
- Statin prescribed at discharge

### Notes

- ◆ A patient may fall into multiple categories (e.g. a patient may be included in PCI, MI, and HF registries).
- ◆ If a medication is contraindicated, the reason for the contraindication must be documented.

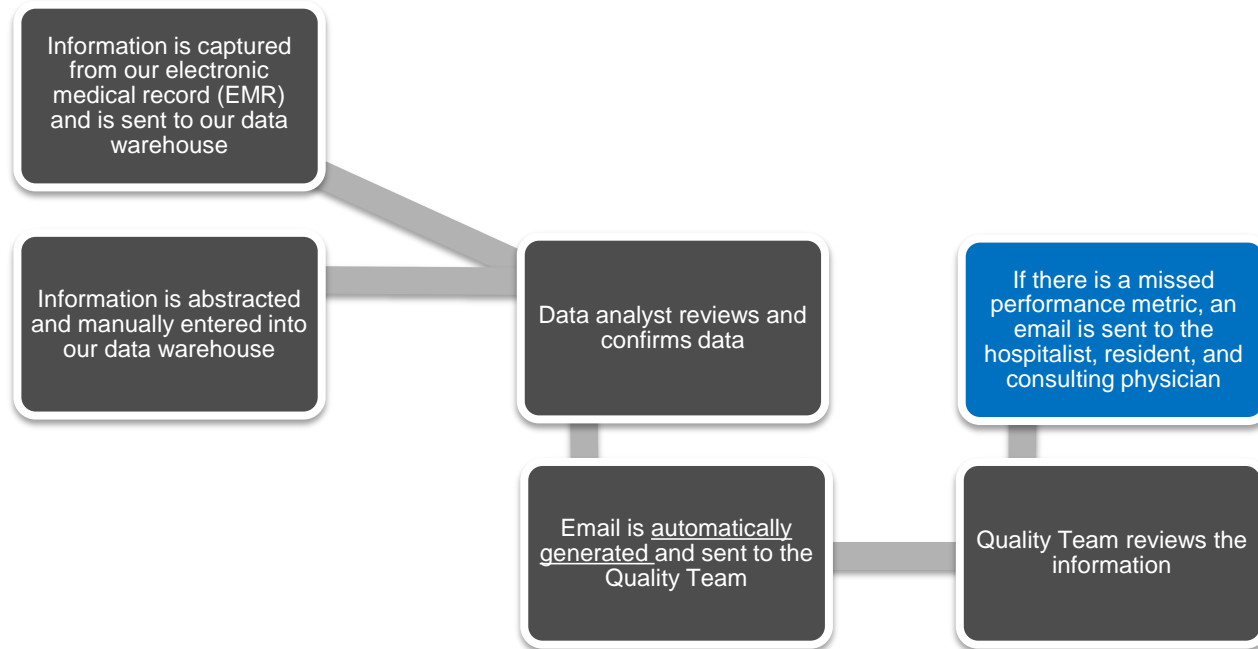

---

Please contact [drew.baldwin@virginiamason.org](mailto:drew.baldwin@virginiamason.org) with any questions about the cardiovascular care performance metrics.

# Open Access Scheduling

## Key features:

- Goal of open schedules is to allow for maximum flexibility
- No holds blocking the schedule
- Duration of appointment types standardized, across providers
- Simplified scheduling process allowing the software to easily

The screenshot displays a scheduling software interface for a date in November 2015. The main window is titled "Scheduling Appointment Book" and shows a grid of appointment slots for various providers. The providers listed at the top of the grid are Baldwin MD, Chan MD, Fellows MD, Gold MD, Holmes MD, Hwang MD, Kritzer MD, Longo MD, Rho MD, Weiss MD, Woo MD, Blancher ARNP, and Davis A. The grid shows appointment types such as "Card FW General", "Hospital Rounds", "Card DT General", "Card IS General - A", "Card LY General-A", "Card DT General", "Card DT Cath/EP", "Card DT Echo Read", and "Card BV General-B". The interface includes a menu bar (Task, Edit, View, Help), a toolbar, and a yellow header section for patient information (Name, MRN, DOB, Age, Sex, Person Comments).

# Educating and Getting Physicians Involved

## PART 1

CHF - Depart - CISTEST, SURGINET

🔄 🗨️

### Congestive Heart Failure

**Type of heart failure:**

- Systolic heart failure
- Diastolic Heart Failure
- Combined systolic and diastolic HF
- Right Heart Failure
- Other:

**Acuity of heart failure:**

- Acute
- Chronic
- Acute on Chronic
- Unspecified

Charting will add a Heart Failure problem to the patient's Problem List if not already present.

### Measurement of Left Ventricular Systolic Function

**Left ventricular systolic function measured before or during this hospitalization:**

- LVEF > or Equal to 40%
- LVEF < 40%
- LVEF Not Measured

**Reason LVEF not measured:**

- LVEF measurement planned after discharge
- Patient Left Against Medical Advice
- Comfort Measures Only
- Hospice Care
- Patient refused an echocardiogram
- Other:

### Medications

**ACE-inhibitor or ARB prescribed at discharge\*:**

- Prescribed at Discharge
- Not Prescribed at Discharge

**Reason ACE-inhibitor or ARB not prescribed:**

- LVEF > or Equal to 40%
- Contraindicated Due to Allergy
- Contraindicated Due to Cough
- Contraindicated Due to Low Blood Pressure
- Contraindicated Due to Kidney Disease
- Contraindicated Due to Hyperkalemia
- Hospice Care
- Comfort Measures Only
- Patient refused
- Other:

\*Required if LVEF < 40%, unless contraindicated.

# Educating and Getting Physicians Involved

## PART 2

**HF-specific beta blocker prescribed at discharge\*:**

- Carvedilol prescribed at discharge
- Metoprolol prescribed at discharge
- Bisoprolol prescribed at discharge
- Not prescribed

**Reason HF-specific beta blocker not prescribed:**

- LVEF > or Equal to 40%
- Allergy
- Bradycardia or conduction abnormality
- Hypotension or low blood pressure
- Reactive Airway Disease
- Patient Left Against Medical Advice
- Comfort Measures Only
- Hospice Care
- Patient refused medication
- Other:

**\*Required if LVEF < 40%, unless contraindicated. Evidence-based HF-specific beta blockers are carvedilol, metoprolol succinate, and bisoprolol.**

## PART 3

### Follow Up Appointment Documented

The date, time, and location of the scheduled appointment must be documented in the chart before the patient is discharged.

**Follow-up appointment documented:**

- Follow-up appointment documented
- Follow-up appointment not documented

**Reason follow-up appointment not documented:**

- Appointment for home health visit documented instead
- Transferred to another hospital
- Discharged to skilled nursing facility
- Discharged to inpatient rehab facility
- Discharged to hospice
- Patient Left Against Medical Advice
- Medical reason for no follow-up scheduled
- Patient refused to seek follow-up
- Patient refused medication
- Other:

# Patient Engagement Tools

# New Heart Failure Patient Packet

**The Heart Failure Patient Education Packet was recently revised because we needed:**

More focused language on individual patient needs

Simple and informative visuals

Tools that guide conversation and provide teach-back opportunities

Packets that could be used in the inpatient and outpatient settings

## Salt, Sodium, Fluid and Heart Failure Patient Guide

**Too much salt and liquid is not good for you**

Sodium (Na) and water swell together in the body, so when there is excess salt, there is excess water. Since the heart's pumping function is weakened, the excess fluid backs up from the heart into the lungs, making it hard to breathe.

**How to prevent fluid retention:**

- Do not add extra salt to your food. Many foods already have salt in them.
- Read the "Nutrition Facts" label on food.
- Have no more than 2000 milligrams (mg) total of sodium per day.
- Do not drink excessive amounts of liquid (like water, coffee, tea, etc., milk).
- Drink less than 6 liters or 6 measuring cups of liquid a day. Anything that melts at room temperature is also considered a liquid (like cream and JELL-O).

**What you can eat:**

- Fresh or most frozen (not salted) fruits and vegetables
- Canned fruit
- Fresh meats (chicken, turkey, steak, hamburger, pork chops)
- Grains and cereal - Many cereals like oatmeal or cereal of wheat and branals have less than 10 mg of sodium. You can eat braned (not dry) and unsalted rice
- Beans made from scratch or in a can with "no added salt" on the label
- Alks and yogurt - 1 to 2 servings a day (swimming in ice cup)
- Unsalted nuts and unsalted peanut butter
- Oil and vinegar salad dressing

**Foods to limit:**

- You can occasionally eat small amounts of the high sodium foods listed below if you keep your total sodium per day less than 2000 mg.
- Processed foods (like those in fast-food or convenience stores that have a lot of sodium)
- Cheese and processed cheese (like Velveeta® or Cheddar White®)
- Canned meats, canned or smoked meat and some fish including:
  - bacon
  - corned beef
  - ham
  - sausage
  - hot dogs
  - jerky
  - salami
  - protein
- Canned soups and canned vegetables, beanitos, burrito cubes
- Salt substitutes are not generally recommended
- Condiments including catsup, mustard, chili sauce, soy sauce, ranch dressing, barbecue sauce, meat sauce, salad dressings, teriyaki sauce
- Olives, pickles, pickles, bottled salad dressing

**How to reduce the amount of sodium you eat:**

- Do not use the salt shaker at the table or add salt when you cook
- Buy unsalted butter and unsalted spreads like popcorn, pretzels, chips
- Buy unsalted nuts and sodium-free
- Use herbs, garlic, lemon, or other salt-free seasonings
- Try a special diet such as low, dash or salt-free diet

**Should Note:** You can still be able to taste the food on a special diet because of the natural flavors of the ingredients.

**Too much sodium is easy to get**

Read the "Nutrition Facts" label

- Note the serving size on the label. Nutritional values are based on one serving.
- If you eat more than one serving, you must add the amount of sodium for each serving to your daily total of sodium.
- Your total sodium for each meal or snack should be less than 200 milligrams (mg) or that your daily total is less than 2000 mg.
- The sodium content is listed on the label.
- Foods that are less than 10 mg sodium per serving are considered low sodium.

**Favorite sources or items:**

- Some frozen entrees are low in sodium, however they are hard to find.
- Health food grocery stores (like Food Max, Whole Foods, PCC Natural Market, Central Market, Mission Market) may have them.
- Some low salt brands are Amy's®, Kashi®, Organic Blue®, Smart Ones®, Mission®

**Avoid eating just after being discharged from the hospital:**

- Fast food and convenience meals are very high in sodium.
- Do not eat "fast food" or at restaurants.
- The fast-food lines leaving the hospital, and home-cooked meals you can make sure they are low in sodium.
- When you are in a car or on a plane, avoid eating when it's OK to eat at restaurants.
- This gives you time to get stronger and helps prevent fluid retention.

**Nutrition Facts**

<b>Total Sodium</b>	
Amount	% Daily Value*
100 mg	20%
*Percent Daily Values are based on a diet of other people's secrets.

# UNDERSTANDING HEART FAILURE

## Managing and Treating Your Chronic Heart Condition

## Heart Failure Action Plan

Same time, Same way, Every day

**Under Control**

- No shortness of breath
- No swelling
- Weight is stable
- Symptoms are stable

**Green Zone (Under Control)**

- No shortness of breath
- No swelling
- Weight is stable
- Symptoms are stable

**Green Zone Means:**

- Keep up the good work!
- Continue taking your medications and following your diet.
- Follow up with your provider on a regular basis.

**Caution**

- Increased shortness of breath
- Increased swelling
- Increased weight (weight gain of three pounds in one day or five pounds over target weight)

**Yellow Zone (Caution)**

- Increased shortness of breath
- Increased swelling
- Increased weight (weight gain of three pounds in one day or five pounds over target weight)

**Yellow Zone Means:**

- Your symptoms are progressing; get help soon.
- Call your health care provider to schedule an appointment.
- Do not try to fix this yourself.
- If it's an emergency, call 911.

**Alert**

- Shortness of breath or chest tightness at rest
- Weight gain more than five pounds in one day
- Fainting
- Severe symptoms

**Red Zone (Alert)**

- Shortness of breath or chest tightness at rest
- Weight gain more than five pounds in one day
- Fainting
- Severe symptoms

**Red Zone Means:**

- Your symptoms could potentially be serious.
- Call your provider or go to the emergency room.
- If it's an emergency, call 911.

**Virginia Mason**

## Sodium Content of Foods

Many foods contain some amount of sodium. Some foods contain more sodium than others. The amount of sodium in a food is listed on the label. The amount of sodium in a food is listed on the label. The amount of sodium in a food is listed on the label.

Food	Sodium (mg)
Beef, Pork & Lamb	100-200
Poultry & Fish	100-200
Milk, Cheese & Eggs	100-200
Fruits & Vegetables	100-200

**PEAS**

# Heart Failure - My Care Plan

## Patient Guide

Heart failure is when your heart does not pump as well as it should. Heart failure is a chronic condition, but it can be managed.

### Medications - Take Medications as Directed

Medication can improve heart function and help you live longer.

#### What you can do:

- Follow instructions about taking your medication.
- Learn what your medications do (like lower blood pressure).
- Keep a current list of all your medications.
- Take your list to all your appointments with your doctors or nurse practitioners.

I have a system to keep track of when to take each medication.  Yes  No

I have a system to keep confirm that I took each medication at the right time.  Yes  No

Challenges with taking my medications include \_\_\_\_\_

### Stop Smoking - Quit for Your Health

Smoking makes your heart work harder and your heart failure worse.

#### What you can do:

- If you smoke, stop for your health.
- Create a plan with your doctor or nurse practitioner to quit smoking.

I do not smoke  I have a plan to quit smoking \_\_\_\_\_

### Weight - Watch for Weight Gain

Gaining weight quickly can mean excess fluid is beginning to build up.

#### What you can do:

- Weigh yourself every morning after going to the bathroom - same time, same way, every day.
- Record your weight in your daily weight diary.
- Take your daily weight diary with you to every appointment.
- Call your doctor or nurse practitioner if you gain more than 3 pounds in 3 days, you gain more than 3 pounds overnight, or you are more than 5 pounds over your target weight.

I have a scale at home  Yes  No

I agree to weigh myself daily  Yes  No

### Symptoms - Watch for Symptoms like Swelling

If you notice change, you may need to adjust.

#### What you can do:

- If you notice any of the following, call your Heart Failure Team at 206-341-1111.
- Increased swelling in your belly, legs or feet. Weight gain of more than 3 pounds in 3 days. Increased cough or shortness of breath.
- Increase in number of pillows to sleep.
- Chest pain.
- You must sit in a chair to sleep.

### Diet - Limit Foods High in Salt and Liquids

Sodium (salt) and water travel together in the body, so when there is excess salt, there is excess water. Since the heart's pumping function is weakened, the excess fluid backs up from the heart into the lungs, making it hard to breathe.

#### What you can do:

- Do not add extra salt to your food. Many foods already have salt in them.
- Read the "Nutrition Facts" label on food.
- Have no more than 2000 milligrams (mg) total of sodium per day.
- Do not drink excessive amounts of liquid (like water, coffee, soup, tea, milk).
- Drink less than 2 liters or 8 measuring cups of liquid a day. Anything that melts at room temperature is also considered a liquid (like ice cream and JELL-O).

I can lower my sodium by \_\_\_\_\_

### Activity - Stay Active and Pace Yourself

The heart is like any other muscle. It needs exercise to stay healthy.

#### What you can do:

- Stay active. It is important.
- Pace yourself.
- Avoid becoming exhausted.
- Stop and rest during activities if you feel tired or short of breath.
- Discuss activity and exercise with your doctor or nurse practitioner.

A good exercise for me is \_\_\_\_\_

### Get Help - Immediately Call 911 or Your Doctor or Nurse Practitioner

Some symptoms are very serious and require immediate medical attention.

#### What you can do:

- Immediately call 911, your doctor or nurse practitioner if you experience any of the following:

Shortness of breath *unrelieved with rest* Wheezing or chest tightness at rest  
Unrelieved chest pain Fainting

If I am in the red zone I will \_\_\_\_\_

### Follow Up Appointment - Partner with Your Care Team

#### What you can do:

- Make sure you have an appointment with your provider taking care of your heart.
- See them within 4 days of leaving the hospital.
- Make a list of questions you have and take it to your appointment.

My next appointment is on \_\_\_\_\_ at \_\_\_\_\_ AM/PM

With \_\_\_\_\_

Your condition is manageable and you have a very important role.

# Focusing on the Patient's Progress

Concentrated teaching on making sure the patient:

- Weighs him or herself
- Understands a low sodium diet
- Continues medications, even if he or she is feeling better

## CHF Patient Discharge Resource List

-and-

"CHF pick and pull education station"

Does your patient need a scale? Order on Cerner "sup scale"

Does your patient need a Mediset for medications? Vocera "concierge cart" *note: this is not yet available. Coming soon*

CHF education on-demand video: prior to discharge, all CHF patients and/or family should watch the on-demand CHF video #309. *Coming soon: set time/channel each day when video will be played!*

### Education Station Contents:

1. Individual eating habits dietary instructions:
  - a. Meal planning (those who shop/cook @home)
  - b. Low(er) Sodium options for common fast food
  - c. Low sodium options for Frozen Dinners
  - d. Low sodium soups
2. General information Low Sodium diet handout
3. Sticker for Medication List "do not stop taking meds even if you feel better"
4. Sticker for Discharge Instructions "salt and water are friends and attract each other like magnets"

# Plan-Do-Study-Act

PDSA Process Improvement

Testing documentation for the medical chart, with nurses, social workers, and other team members.

Key Learning: **We need nurse-led rounding** to identify heart failure patients before discharge, and to help schedule follow-up appointments.

HF EDUCATION by RN/PharmD:

**Support system:**  
Who helps take care of your health?  
Psychosocial support issues: \_  
Do you feel you need assistance with any of the following?  
 Transportation  
 Taking your meds daily  
 Med refills/Grocery shopping  
 Making follow-up appointments  
 Financial support

**Medications**  
 Medication reconciliation done  
 Medication concerns and side effects addressed  
 Importance of medication adherence discussed  
 barriers to adherence identified: \_  
 Updated medication list printed and given to patient

**Modifying risk for HF progression**  
 Recommend the Influenza and pneumococcus vaccinations be up-to-date  
BP <140/90?  Yes  No  
 Smoking Cessation counseling done  
 Alcohol abstinence counseling done

**Daily weights**  
 Self-care weight diary given.  
 Patient doing daily weight after voiding every morning.  
 If not, barriers to monitoring weight: \_  
 Reviewed home weight (range, average): \_

**Recognition of HF symptom worsening**  
 Stoplight tool discussed with patient  
 Patient able to teach-back the plan for red zone symptoms

**Diet counseling**  
 Customized recommendations to help patient keep daily sodium intake<2g, and fluid intake<2L:  
 Barriers to adherence with low sodium and fluid intake?  
 Referral to Registered Dietician, if indicated (e.g. protein malnourishment, further salt intake education)

**Quality of life**  
HVHC: Enrolled  Yes  No  GPH score (Prev score: \_)  
 GMH (Prev score: \_)

**Activity recommendations**  
 Daily activities customized to patient discussed - [ ] Yes [ ] No

**Other issues:** \_

CHF packet with updated care plan given to patient (AHA recommended)
