

American Heart Association®

Target: Aortic Stenosis™

2027

HOSPITAL RECOGNITION CRITERIA

(based on 2026 data)

80%

PRIMARY MEASURE

Timely Treatment for Severe Aortic Stenosis from Class I Indication Date

Percentage of patients with a Class I Indication for Aortic Valve Replacement who receive definitive treatment (SAVR or TAVI) within 90 days of initial diagnosis

6 patients minimum in denominator

55%

Defect-Free Timely Diagnosis of Aortic Stenosis Severity

Percentage of echoes with potential severe Aortic Stenosis who have all necessary evaluation and testing completed to clarify severity and determine whether a Class I Indication exists

30 echoes minimum in denominator

Supporting Measures: Must report, but no threshold set for achievement and no minimum requirement for denominator

Key Findings in Echo Report and Summary/Conclusion

Evaluation by Multidisciplinary Team

Timely Follow up Echocardiogram Completed

VOLUME CRITERIA

Must have 40 patients with encounters dated in 2026 entered into the registry
