Resource Guide: Clinical Practice Questions

This Resource Guide is intended as a supportive tool for answering the Clinical Practice Questions (Q7-Q11) included as part of the formal data submission process for 2024 Target: Type 2 Diabetes achievement awards. These questions are meant to serve as an assessment of your organization’s practices for diabetes care, particularly assessing and managing risk for cardiovascular disease (CVD), use of guideline-based medical therapies, and preventing chronic kidney disease (CKD).

These questions are required to receive an achievement award but do not affect award level. To see a full list of questions and find instructions for submitting data, please download the 2024 Target: Type 2 Diabetes Data Collection Worksheet.

Clinical Practice Questions

- Protocols & Treatment Plans (Q7 – Q8)
- Guideline-Based Pharmacologic Therapy (Q9 – Q10)
- Kidney Health (Q11)

Note:

- The 2024 recognition cycle is based on the performance period of the 2023 calendar year (1/1/2023 – 12/31/2023)
- Please consider the organizational area your data submission represents. For example, if the facility name in the data platform is ABC Health System – North Clinic, and the other data submitted are specific to this facility, please answer the below questions with only North Clinic in mind. However, if you are submitting data on behalf of the entirety of ABC Health System, please answer the below questions with the whole of ABC Health System in mind, to the best of your ability.

PROTOCOLS & TREATMENT PLANS

Protocols & Treatment Plans (Target: Type 2 Diabetes Questions 7 & 8):

Q7. Which of the following key characteristics do your clinical teams address for patients with type 2 diabetes as part of organizational standard protocols? Select All that Apply.

- Current lifestyle
- Co-morbidities i.e. ASCVD, HF, CKD
- Clinical characteristics associated with increased CVD risk i.e. age, blood pressure, cholesterol, smoking, age, weight, etc.
- Issues such as motivation and depression
- Social determinants of health (economic and social conditions that may affect a patient’s health)
- Other characteristics not listed
- We don’t have a standard protocol to address key characteristics of patients with type 2 diabetes.
- I don’t know / I’m not sure
Q8. When your organization operationalizes treatment plans for managing patients with type 2 diabetes, which of the following considerations does the treatment plan include as standard process? Select All that Apply.

- Comprehensive lifestyle modification recommendations\(^1\), \(^2\), \(^3\), \(^5\)
- Diabetes self-management education and support\(^2\), \(^1\), \(^3\)
- Use of guideline-based treatment algorithms (such as the ADA Standards of Care treatment algorithm or ACC/AHA treatment of T2DM for primary prevention of CVD algorithm) by providers and care teams\(^2\), \(^2\)
- Use of ACC/AHA ASCVD Risk Calculator\(^4\) for CVD risk-based treatment decisions related hypertension and lipid management in patients with type 2 diabetes\(^2\), \(^4\)
- Use of guideline-based pharmacologic therapy\(^3\) inclusive of cardio protective antihyperglycemic agents, such as SGLT-2 inhibitors and GLP-1 receptor agonists\(^2\), \(^5\)
- We don’t operationalize a specific treatment plan for patients with type 2 diabetes.
- None of the above
- I don’t know / I’m not sure

# Guideline-Based Pharmacologic Therapy (Target: Type 2 Diabetes Questions 9 & 10):

**9A-9F.** Please indicate where the following therapies are being prescribed for patients with type 2 diabetes, to the best of your knowledge.

**Therapies:**

- **A.** Angiotensin system blockers (ACE inhibitor, ARB, or ARNI)
- **B.** Other antihypertensive medications such as beta-blockers, diuretics, etc. EXCEPT ACE/ARB/ARNI
- **C.** Lipid-lowering therapies
- **D.** Dipeptidyl Peptidase-4 (DPP4) inhibitors
- **E.** GLP-1 receptor agonists
- **F.** SGLT-2 inhibitors

**Within my organization, [A-F individually], are prescribed for patients with type 2 diabetes in:**

Select All that Apply.

- Family medicine or internal medicine
- Another specialty or specialties (example: general cardiology, endocrinology, etc.)
- Specialty clinic(s), such as those focused solely on lipid or cardiometabolic care
- None of the above – we refer to external specialty providers
- None of the above – my organization neither prescribes these therapies nor has a process for referral
- I don’t know / I’m not sure

**10.** What barriers does your organization experience related to initiation of guideline-directed medical therapy for cardio protective antihyperglycemic agents, such as SGLT-2 inhibitors and GLP-1 receptor agonists, for patients with type 2 diabetes?

Select all that apply.

- System-based barriers such as formulary or prior authorization limitations
- Clinicians unsure who is the primary lead in prescribing cardio protective antihyperglycemic agents, i.e., whether to refer to specialty provider for prescribing
- Prescriber reluctance to modify or add to patients’ medications
- Lack of access to specialist for referral
- Patient reluctance, such as concerns about adverse effects or negative perception of pharmacotherapy in general
- Cost/affordability concerns expressed by patients
- Other circumstantial barriers for patients, such as lack of transportation, lack of pharmacy access, homelessness, etc.
- Other barriers not listed
- No barriers
- I don’t know / I’m not sure

KIDNEY HEALTH

☐ Yes  ☐ No

If “Yes” is selected, please select your processes for evaluating kidney health for patients with diabetes:

☐ Assessment of estimated glomerular filtration rate (eGFR) at least once per year, per patient

☐ Assessment of estimated glomerular filtration rate (eGFR) less frequently than once per year per patient (such as once every 2 years)

☐ Assessment of urine albumin-creatinine ratio (uACR) at least once per year, per patient

☐ Assessment of urine albumin-creatinine ratio (uACR) less frequently than once per year per patient (such as once every 2 years)

☐ Assessment of kidney health using some other metric

☐ We do not have a process to evaluate kidney health in patients with diabetes

☐ I don’t know / I’m not sure
