American
Heart
Association.

Protocols and Quality Improvement Goals and Responsibilities

- Assess how many of the participating organizations have existing AMI protocols

- Identify process to review individual organization and system needs for a standardized regional assessment, treatment and transport protocol set

- Identify elements required for a standardized regional protocol set

- Identify process to review different protocols and start assimilating

- Identify process to evaluate implementation of and outcomes of new standardized regional protocol set

- Assess how the region or county can create a regular and sustainable QI process to measure system performance

- Identify barriers to data collection and reporting in participating organizations (EMS)

- Identify ways to help capture and measure "system" level items like reperfusion to recognition (R2R) or symptom onset through arterial reperfusion (SOAR)

- Assess internal QI process and frequency in participating organizations
