

The American Heart Association has been working to save and improve lives from heart disease and stroke for more than 90 years, with scientific research at the core of all our efforts.

The Quality and Health IT Team at the AHA/ASA aims to provide excellence in prospective research by ensuring effective study management from start-up through study closeout for research initiatives that directly align with the AHA/ASA mission to build healthy lives free of cardiovascular disease and stroke.

### Clinical Research Solutions:

The AHA/ASA Quality and Health IT Research team (QHIRT), provides a dedicated research team of clinical research professionals to execute on registry studies and prospective research, including real world clinical trials and patient centered outcomes research. Clients can partner with the research team to conduct investigations on the leading edge of cardiovascular and stroke care.

With proven success implementing large multi-center studies, the experienced QHIRT group proactively manages the life cycle of a clinical trial within state of the art HIT platforms. By applying a customer focus approach to each research project, whether national or international, the QHIRT team is committed to ensuring excellence in research innovation.

- The QHIRT functions as a Contract Research Organization, Data Coordinating Center and research partner to conduct novel research utilizing the Registry RCT design in addition to other study designs.
- The AHA is widely known as the most trusted non-profit brand, one that plays a critical role in bringing cutting-edge science to the consumer and evidence-based guidelines to the clinician.
- The QHIRT is strategically placed to augment and be on the forefront of innovative research projects.

#### Process Flow and Data Flow

#### QHIRT Clinical Trial Expertise:

- Protocol Development
- Site Selection & Study Startup
- Training, IRB, Contract Negotiation
- Subject Enrollment, Data Collection
- Analytics, Data Monitoring, Study Closeout
