HOW TO MANAGE BLOOD SUGAR

1 UNDERSTAND BLOOD GLUCOSE

The first step to managing your blood sugar is to understand what makes blood sugar levels rise. heart.org/Diabetes

GLUCOSE

The carbohydrates and sugars in what you eat and drink turns into glucose (sugar) in the stomach and digestive system. Glucose can then enter the bloodstream.

INSULIN

Insulin is a hormone made in the pancreas that helps the body’s cells take up glucose from blood and lower blood sugar levels.

In type 2 diabetes glucose builds up in the blood instead of going into cells because:

- The body develops “insulin resistance” and can’t use the insulin it makes efficiently.
- The pancreas gradually loses its ability to produce insulin.

The result can be a high blood glucose level.

2 TRACK LEVELS

Health care providers can take blood glucose readings and provide recommendations. If you’re diagnosed with type 2 diabetes, you will need to monitor your blood sugar level regularly. Know Diabetes by Heart can help you manage type 2 diabetes. KnowDiabetesbyHeart.org

3 TIPS FOR SUCCESS

EAT SMART

Eat a healthy diet of vegetables, fruits, whole grains, beans, legumes, nuts, lean proteins and fish. Limit sweetened drinks, added sugars, fatty foods, processed meats and sodium. heart.org/EatSmart

MOVE MORE

Being physically active can lower your risk of developing diabetes and help you manage the disease if you already have it. heart.org/MoveMore

MANAGE WEIGHT

Stay at a healthy weight to help prevent, delay or manage diabetes. heart.org/Weight

DON’T SMOKE

Smoking, vaping or using tobacco can increase your risk of heart disease, stroke, many cancers and other chronic diseases. It may also make prediabetes and diabetes harder to manage. heart.org/Tobacco
