CONSTRUCTION WORKERS & CARDIOVASCULAR DISEASE IN THE UNITED STATES

CARDIOVASCULAR DISEASE IN THE WORKPLACE

Roughly every **34 seconds** someone dies from cardiovascular disease.

About every **3 minutes & 14 seconds** someone dies from a stroke.

About half of adults have some form of cardiovascular disease.

70% of Americans feel helpless to act during a cardiac emergency.

Employees who suffer a heart attack can miss an average of **177 days of work.**¹

Cardiovascular disease costs employers an estimated **\$422 billion.**

On average, employees with uncontrolled high blood pressure are **more likely to be absent from work.**

Nearly **1 in 5** cardiac arrests occur in public, such as at work, a job site or a public location.

CARDIOVASCULAR DISEASE WITHIN THE CONSTRUCTION INDUSTRY

About **343,000** construction workers have been diagnosed with cardiovascular disease.²

Exposure to dust, fumes, chemicals or secondhand smoke at work may **increase CVD risk.**

Nearly **3 in 10** construction workers use tobacco.

Approx. **1 in 15** construction workers have diabetes.

Close to **1 in 4** construction workers are obese.

Roughly **45%** of construction workers do not meet CDC exercise guidance.

HOW TO BUILD A HEALTHIER WORKFORCE

Form a company [Heart Walk team.](#)

Offer [volunteerism opportunities](#) to your employees.

Share mental health and well-being [resources](#) with employees.

Offer a [Hands-Only CPR experience](#) at work.

Participate in [Well-Being Works Better™.](#)

Develop a [Cardiac Emergency Response Plan](#) for your worksite.

Please speak with your American Heart Association representative for more details on any of these initiatives.
