Incidence of cardiovascular disease (coronary heart disease, heart failure, stroke, or intermittent claudication; does not include hypertension alone) by age and sex

Deaths attributable to diseases of the heart (United States: 1900–2011).
Deaths attributable to cardiovascular disease (United States: 1900–2011).
Percentage breakdown of deaths attributable to cardiovascular disease (United States: 2011).

- Coronary Heart Disease: 47.7%
- Other: 16.9%
- Stroke: 16.4%
- Heart Failure*: 7.4%
- High Blood Pressure: 8.3%
- Diseases of the Arteries: 3.3%
Cardiovascular disease (CVD) deaths versus cancer deaths by age (United States: 2011).
Cardiovascular disease (CVD) and other major causes of death: total, <85 years of age, and ≥85 years of age.
Cardiovascular disease (CVD) and other major causes of death in males: total, <85 years of age, and ≥85 years of age.
Cardiovascular disease (CVD) and other major causes of death in females: total, <85 years of age, and ≥85 years of age.
Cardiovascular disease and other major causes of death for all males and females (United States: 2011).
Cardiovascular disease and other major causes of death for white males and females (United States: 2011).
Cardiovascular disease and other major causes of death for black males and females (United States: 2011).
Cardiovascular disease and other major causes of death for Hispanic or Latino males and females (United States: 2011).
Cardiovascular disease and other major causes of death for Asian or Pacific Islander males and females (United States: 2011).

“Asian or Pacific Islander” is a heterogeneous category that includes people at high cardiovascular disease risk (eg, South Asian) and people at low cardiovascular disease risk (eg, Japanese).
Cardiovascular disease and other major causes of death for American Indian or Alaska Native males and females (United States: 2011).
Age-adjusted death rates for coronary heart disease (CHD), stroke, and lung and breast cancer for white and black females (United States: 2011).
US maps corresponding to state death rates (including the District of Columbia), 2011.
Estimated average 10-year cardiovascular disease risk in adults 50 to 54 years of age according to levels of various risk factors (Framingham Heart Study).
Hospital discharges (ICD-9) for the 10 leading diagnostic groups (United States: 2010).
