## CARDIOGENIC SHOCK REGISTRY POWERED BY GET WITH THE GUIDELINES

Cardiogenic shock is a life-threatening condition that occurs when the heart doesn't pump enough blood and oxygen to meet the body's needs. Heart attacks are the most common cause of a cardiogenic shock, but it can also be triggered by other health conditions. Managing patients with cardiogenic shock is often complicated and the American Heart Association (AHA) created the Cardiogenic Shock Registry Powered by Get With The Guidelines® to better understand the clinical symptoms of shock types, treatment patterns, and outcomes and improve the quality of care in patients presenting to U.S. hospitals with cardiogenic shock.

*"Cardiogenic shock is a devastating complication of heart disease that claims the lives of more than 1 in 3 patients who present with shock. To understand how to improve care, we first need a clearer view of the landscape of existing treatment practices for cardiogenic shock in U.S.-based acute care settings."*

*Mitchell Kruchoff, M.D., FACC, FAHA, FSCAI*

### REGISTRY FEATURES

**GUIDING BEST PRACTICES**

**PERFORMANCE METRICS**

**FOCUS ON HEALTH EQUITY**

**REAL TIME REPORTING**

**RESEARCH INFRASTRUCTURE**

### CARDIOGENIC SHOCK RESEARCH

The AHA is focused on building tools to support real-world data used for research that can help the medical community improve the care of patients. National-level cardiogenic shock registry data will be made available on the Precision Medicine Platform, an online cloud-based technological solution supporting collaborative research. Researchers are encouraged to learn more about the proposal submission process.
